*Using Trends and Scenarios as Tools for Strategy Development* Ulf Pillkahn, 2008-07-14 Is my enterprise really prepared for future

business What can I do to become more competitive Ulf Pillkahn's book is directed at all of those seeking answers to these questions executives in strategic positions business analysts consultants trend scouts marketing and product managers and research engineers The book presents the two most powerful tools for future planning environmental analysis based on the use of trends as well as the development of visions of the future through the use of scenarios While scenarios are generally regarded as a classical management tool it is expected that the importance of trends will gain tremendously in the coming years Pillkahn demonstrates how to build robust strategies by aligning the results of environmental and enterprise scenarios thereby offering entirely new insights Using Trends and Scenarios as Tools for Strategy Development convincingly illustrates why efficient observation of the environment of an enterprise is an absolutely essential factor for strategy development and why strategy development only works if it is institutionalized as a permanent enterprise process It also addresses the issue of what information is needed to keep both processes running The book further describes how trends can be categorized and offers advice on how to glean the essential information from the vast variety of trends Information is provided on how scenarios are used as a holistic instrument for creating visions and pictures of the future and how the results of trend research and scenario techniques find their way into entrepreneurial strategy development An optimized strategy development process is also outlined Practical examples and real life pictures of the future round off Pillkahn's insightful discussion of future business planning [ECMLG2013-Proceedings For the 9th European Conference on Management Leadership and Governance](#) Maria Th Semmelrock-Picej,Aleš Novak,2013-01-09

**Sapient Circuits and Digitalized Flesh** Matthew E. Gladden,2018-03-14 This book develops new insights into the evolving nature of organizations by applying the methodologies of posthumanist thought to the fields of organizational theory and management An emerging organizational posthumanism is described that makes sense of the ways in which forces of technological posthumanization are reshaping the members personnel structures information systems processes physical and virtual spaces and external environments available for use by organizations Conceptual frameworks and analytic tools are formulated that diagnose the convergence in the capacities of human and artificial actors generated by new technologies relating to human augmentation synthetic agency and digital physical ecosystems As the first systematic study of these topics this text will interest scholars and students of organizational management and management practitioners who grapple on a daily basis with the forces of technologization that are increasingly powerful drivers of organizational change **Neuroprosthetic Supersystems**

**Architecture** Matthew E. Gladden,2017-05-13 This volume serves a resource for the design and analysis of neuroprosthetic supersystems which can be defined as organizations either small or large simple or complex whose human members have been neuroprosthetically augmented While numerous other texts focus on the biomedical engineering of neuroprostheses as technological devices or on the biocybernetic engineering of the host device system comprising a neuroprosthesis and its human host this volume presents a unique investigation of the intentional creation of higher order supersystems that allow

multiple neuroprosthetically augmented human beings to interact with one another and with external information systems in order to accomplish some shared task In essence this can be understood as the work of designing and managing neuroprosthetically enhanced organizations Individual chapters present an ontology of the neuroprosthesis as a computing device a biocybernetic ontology of the host device system an ontology of the neuroprosthesis as an instrument of cyborgization motivating and inhibiting factors for the organizational deployment of posthumanizing neuroprostheses by military organizations and other early adopters an introduction to enterprise architecture in the context of technological posthumanization an exploration of the implications of neuroprosthetic augmentation for enterprise architecture and considerations for the development of effective network topologies for neuroprosthetically augmented organizations The conceptual frameworks formulated within this book offer a wide range of tools that can be of use to policymakers ethicists neuroprosthetic device manufacturers organizational decision makers and others who must analyze or manage the complex legal ethical and managerial implications that result from the use of emerging neuroprosthetic technologies within an organizational context

**Cyborgization and Virtual Worlds** Matthew E. Gladden, 2017-09-05 Whether it's adding a night vision cybereye or acquiring a full cyborg body the process of cyborgization reshapes the way in which an individual relates to the physical environment around her But how does it transform her ability to dive or to be pulled into virtual worlds

**Cyborgization and Virtual Worlds Portals to Altered Reality** is a resource for designing campaigns grounded in near future hard SF settings in which synthetic bodies and VR cyberware offer characters entirely new ways of perceiving interpreting and manipulating the analog and digital worlds It's easy to know when you enter a virtual environment if the tools you're using are a VR headset and haptic feedback gloves If the virtual experience is too much for you you can always just rip off the headset the digital illusions instantly vanish and you know that you're back in the real world But what if the VR gear that you're employing consists of cranial neural implants that directly stimulate your brain to create artificial sensory experiences Or what if you're wielding dual purpose artificial eyes and robo prosthetic limbs that can either supply you with authentic sense data from the external environment or switch into iso mode cut off all sensations from the real world and pipe fabricated sense data into your brain What signs could you look for to help you determine whether you're in the real world or just a convincing virtual facsimile This second volume in Mnemoclave's Posthuman Cyberware Sourcebook series explores the two ways in which neuroprosthetic technologies immerse a cyborg in her environment and allow her to sense and manipulate the world through embodiment and embedding The process of cyborgization not only grants its human subject an augmented body with enhanced reduced or simply different capacities it also embeds him in a particular part of the real physical world and provides the means by which he senses and manipulates that environment And it may be the instrument through which he dives into virtual worlds as well Among the topics explored are The paths of cyborgization Different approaches to cyborgization including the creation of full body partial extended sessile and hollow cyborgs Differing types of neurocognitive

interfaces that can exist between a piece of cyberware and its human host The extent to which cyberware can be concealed from visual or remote electronic detection The operational lifespan of cyberware and its potential health impacts on users Obstacles to characters acquisition of cyberware including cost legality and required maintenance and customization Problems like neurocoupling resection syndrome NRS that affect full body cyborgs and other augmented individuals Cyberware and virtual worlds Distinctions between virtual augmented and refracted reality The mechanics by which cyborg characters can recognize and adjust to transitions between the real and virtual worlds The use of digital avatars as cyberdoubles or cybermorphs within virtual worlds Plot impacts of cyborg characters maximal partial temporary or long term immersion in VR environments The book is written especially for GMs who are designing adventures or campaigns set in near future worlds with a cyberpunk postcyberpunk or biopunk atmosphere in which posthumanizing cyberware exists and societies are tilting ever further toward the dystopian The text draws extensively on the best contemporary research regarding neurocybernetics and the bioengineering economic sociopolitical and cultural aspects of human enhancement to aid GMs who are looking to give their campaigns a hard sci fi edge The volume includes dozens of special textboxes with plot hooks character traits equipment descriptions and ideas for successfully GM ing the ontological puzzles and narrative twists that cyborgization and virtual reality make possible to help you incorporate the material directly into your game regardless of which rule system you re using
