**Management of Diabetic Foot Problems** George P. Kozak, 1984      Management of Diabetic Foot Problems George P. Kozak, 1984      **Managing the Diabetic Foot** Michael E. Edmonds, Alethea V. M. Foster, 2014-03-03

Foot problems in diabetic patients are some of the most challenging complications to treat due to an often quite late presentation of symptoms from the patient. Therefore, visual recognition of presenting clinical signs is absolutely key for a successful diagnosis and subsequently the right management programme. The 3rd edition of *Managing the Diabetic Foot* once again provides a practical, handy and accessible pocket guide to the clinical management of patients with severe foot problems associated with diabetes such as ulcers, infections and necrosis. By focusing on the need for a speedy response to the clinical signs, it will enable doctors to make rapid, effective management decisions in order to help prevent deterioration and avoid the need for eventual foot amputation. Each chapter focuses specifically on the different stages of foot disease and the clinical management required at that particular stage: the normal foot, high risk foot, ulcerated foot, infected foot, necrotic foot and unsalvageable foot. Full colour throughout, it will feature over 150 clinical photos, numerous hints and tips to aid rapid reference, as well as the latest national and international guidelines on diabetic foot management. *Managing the Diabetic Foot 3E* is the ideal go-to clinical tool for all diabetes professionals: specialist diabetes nurses and podiatrists managing patients with diabetic foot problems.

*Management of Diabetic Foot Complications* Clifford P. Shearman, 2015-02-04

Public and political concern about the increasing prevalence of diabetes has prompted major concern about treatment of patients with the condition. Foot complications are some of the commonest causes of hospitalisation of people with diabetes and if not treated well often lead to amputation. There is evidence that 85% of these amputations can be prevented by better understanding of the problem and by multi-disciplinary teams working more effectively together. This has been recognised and NICE have recently published guidelines on diabetic foot complications, as have Diabetes UK and NHS Diabetes. These have been successful in raising awareness of the problem, but the local multi-disciplinary teams need clear practical advice on how to manage the foot in diabetes and deliver high quality care. With the current interest in improving outcomes for patients with foot complications, this is an ideal time to make a practical, evidence-based handbook available. This book will provide clear practical guidelines on how to manage all aspects of the foot in diabetes, as well as an in-depth analysis of the most recent evidence. The book will be based on care pathways with algorithms for each section, so it would be of practical value in any clinic in primary or secondary care. It will appeal to a wide range of health care professionals treating people with diabetes: vascular surgeons and trainees, orthopaedic surgeons, diabetes specialist nurses, podiatrists and tissue viability nurses.
