Governance, Scale and Power Liza Griffin, 2014-11-13 In recent years there have been several alarming predictions about the future of the planet s fish stocks As a result many national governments and supranational institutions including the European Union have instituted reforms designed to mitigate the crisis This book examines the discourse and practice of good governance in the context of fisheries management It starts by examining the crisis of fisheries in the North Sea caused primarily by overfishing and failure of the European Union s Common Fisheries Policy It then goes on to analyse reforms to this policy enacted and planned between 2002 and 2013 and the proposition that collapse of fish stocks could occur as a result of deficiencies in new governing arrangements i e failure to apply principles of good governance The book argues that impediments to good governance practice in fisheries are not merely the result of implementation deficits but that they constitute a more systematic failure Governance theory addresses issues of power but it does not recognise the many important spatially contingent and relational forms of power that are exercised in actual governing practice For example it frequently overlooks spatial practices and strategies such as scale jumping rescaling and the discursive redrawing of governing boundaries This book exposes some of these spatial power relationships showing that the presence of such relationships has implications for accountability and effective policymaking In sum this book explores some of the ways in which we might better understand governance practice using theories of scale and relational concepts of power and in the process it offers a critique and rethinking of governance theory These reflections are made on the basis of an in depth case study of the attempted pursuit of good governance in the European Union via institutional reforms focusing particularly on the thorny and fascinating case of North Sea fisheries management **Industrial Management** John R. Superintendent of Documents,1995 *It's about Time* Phyllis Moen,2018-08-06 How do two career couples manage in a one career world It s about Time examines this mismatch between outdated scripts and the experiences of dual earner couples It broadens our understanding of occupational and family career strategies couples use in light of the widening gap between their real lives and the outdated work hour and career path roles rules and regulations they confront It s about Time draws on the data from the Cornell Couples and Careers Study to demonstrate that Regardless of income time is a scarce commodity in dual earner households With two jobs two commutes often long work hours high job demands business travel several cars children ailing

relatives and or pets time is always an issue Time is built into jobs and career paths in ways that make continuous full time 40 or typically more hours a week paid work a fact of life in American society The multiple strands of life career family and personal unfold over time Spouses move through their life courses in tandem with early choices to have children or not to work long hours or not to switch jobs or not to relocate for his or her career or not all having long term consequences for life quality and for gender inequality The evidence from this book suggests that it is about time for the United States to confront the realities and needs of contemporary working couples and indeed all members of the new workforce To do so requires more than Band Aid short term and often short sighted policy remedies It s about Time argues that it is essential to re imagine and reconfigure work hours workweeks and occupational career paths in ways that address the widening gaps between the time needs and goals of workers and their families at all ages and stages of the life course
