

3. The following is a description of a different data mining workflow for a recommendation system for the EMI of university students. It is provided for your information. Explain the various stages of the workflow in the context of the data mining process.
- The data set is first preprocessed (impute missing data, remove outliers, etc.) and then split into a training set and a test set.
 - The training set is used to build a recommendation system. The system is built using a matrix factorization algorithm. The algorithm is trained using the training set. The system is then evaluated using the test set.
 - The test set is used to evaluate the performance of the recommendation system. The performance is evaluated using the Area Under the Curve (AUC) metric. The AUC is a measure of the system's ability to distinguish between relevant and irrelevant items.
 - The system is then deployed to the production environment. The system is used to recommend items to users. The system is monitored to ensure that it is performing well.
 - The system is then used to recommend items to users. The system is monitored to ensure that it is performing well. The system is then used to recommend items to users. The system is monitored to ensure that it is performing well.
