Management Action Models Of Administrative Decisions:

Management Action Charles Edward Weber,1969 **Management in the Human Service Organization** United States. Office of Family Assistance,1980 **The Administration of Health Systems** Martin Harrison,2017-07-05 In the late 1960s American society entered a period of rapidly accelerating social change Certainty that U S vast scientific and technical capability would be able to find solutions to all problems began to turn to concern as organizational efforts were unable to keep pace with new developments in a variety of areas The health field with its focus on the well being of individuals felt the impact of these changes particularly strongly Medicines became more focused on isolated health practices as the patient s needs were attended to within groups of unrelated biological systems The emerging thought represented in this collection pushes for the perception of health as a right rather than as something to be earned It argues that deprivation of life saving and life fulfilling opportunities to any populations should not be tolerated The editors also demand more awareness of the implications of isolated health activities and make the case for a comprehensive total health care system Health is no longer just a biological function quality of life is also a concern First published in 1971 by administrators of health agencies teachers and health personnel this work presents perspectives on problems and interpretations of forces and issues that are of continuing importance to health administrators The emphasis on the need to focus on the whole patient rather than just their illness and on providing them with a good life not just a disease free one is still as valid today as it was when this volume was initially published Personnel Literature United States Civil Service Commission. The Science of Bureaucracy David Demortain, 2020-01-21 How the US Environmental Protection Agency designed the governance of risk and forged its legitimacy over the course of four decades The US Environmental Protection Agency was established in 1970 to protect the public health and environment administering and enforcing a range of statutes and programs Over four decades the EPA has been a risk bureaucracy formalizing many of the methods of the scientific governance of risk from quantitative risk assessment to risk ranking Demortain traces the creation of these methods for the governance of risk the controversies to which they responded and the controversies that they aroused in turn He discusses the professional networks in which they were conceived how they were used and how they served to legitimize the EPA Demortain argues that the EPA is structurally embedded in controversy resulting in constant reevaluation of its credibility and fueling the evolution of the knowledge and technologies it uses to produce decisions and to create a legitimate image of how and why it acts on the environment He describes the emergence and institutionalization of the risk assessment risk management framework codified in the National Research Council's Red Book and its subsequent unraveling as the agency's mission evolved toward environmental justice ecological restoration and sustainability and as controversies over determining risk gained vigor in the 1990s Through its rise and fall at the EPA risk decision making enshrines the science of a bureaucracy that learns how to make credible decisions and to reform itself amid constant conflicts about the environment risk and its own legitimacy
