*Electrometallurgical Techniques for DOE Spent Fuel Treatment* National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Board on Chemical Sciences and Technology, Committee on Electrometallurgical Techniques for DOE Spent Fuel Treatment, 2000-08-11 The Committee on Electrometallurgical Techniques for DOE Spent Fuel Treatment was formed in September 1994 in response to a request made to the National Research Council NRC by the U S Department of Energy DOE DOE requested an evaluation of electrometallurgical processing technology proposed by Argonne National Laboratory ANL for the treatment of DOE spent nuclear fuel Electrometallurgical treatment of spent reactor fuel involves a set of operations designed to remove the remaining uranium metal and to incorporate the radioactive nuclides into well defined and reproducible waste streams Over the course of the committee s operating life this charge has remained constant Within the framework of this overall charge the scope of the committee s work as defined by its statement of task has evolved in response to further requests from DOE as well as technical accomplishments and regulatory and legal considerations As part of its task the committee has provided periodic assessments of ANL s R D program on the electrometallurgical technology Electrometallurgical Techniques for DOE Spent Fuel Treatment assesses the viability of electrometallurgical technology for treating DOE spent nuclear fuel and monitors the scientific and technical progress of the ANL program on electrometallurgical technology specifically within the context of ANL s demonstration project on electrometallurgical treatment of EBR II SNF This report evaluates ANL s performance relative to the success criteria for the

demonstration project which have served as the basis for judging the efficacy of using electrometallurgical technology for the treatment of EBR II spent nuclear fuel. It also addresses post demonstration activities related to ANL's electrometallurgical demonstration project and makes related recommendations in this area.

**Disposal of Weapon Plutonium** E.R. Merz, Carl E. Walter, 1995-12-31 This NATO Advanced Research Workshop on Disposal of Weapons Plutonium is a follow up event to two preceding workshops each dealing with a special subject within the overall disarmament issue. Disposition of Weapon Plutonium sponsored by the NATO Science Committee. The first workshop of this series was held at the Royal Institute of International Affairs in London on 24-25 January 1994 entitled Managing the Plutonium Surplus Applications and Options. Its overall goal was to clarify the current situation with respect to plutonium characteristics and availability, the technical options for use or disposal and their main technical, environmental and economic constraints. In the immediate term, plutonium recovered from dismantled nuclear warheads will have to be stored securely and under international safeguards if possible. In the intermediate term, the principal alternatives for disposition of this plutonium are irradiation in mixed oxide (MOX) fuel assemblies in existing commercial light water reactors or in specially adapted light water reactors capable of operation with full cores of MOX fuel and irradiation in future fast reactors. Another option is to blend plutonium with high level waste as it is vitrified for final disposal in a geologic repository. In both cases, the high radioactivity of the resulting products provides self-shielding and prevents separation of plutonium without already developed and available sophisticated technology. The so-called spent fuel standard as an effective protection barrier is required in either case.

**Plutonium Disposition and the U.S. Mixed Oxide Fuel Fabrication Facility** United States. Congress. House. Committee on Armed Services. Strategic Forces Subcommittee, 2007

**Monitoring Nuclear Weapons and Nuclear-Explosive Materials** National Research Council, Policy and Global Affairs, Committee on International Security and Arms Control, 2005-04-15 In this study, CISAC tackles the technical dimensions of a longstanding controversy. To what extent could existing and plausibly attainable measures for transparency and monitoring make possible the verification of all nuclear weapons, strategic and nonstrategic, deployed and nondeployed, plus the nuclear explosive components and materials that are their essential ingredients? The committee's assessment of the technical and organizational possibilities suggests a more optimistic conclusion than most of those concerned with these issues might have expected.

**Nuclear Energy** Raymond L. Murray, Keith E. Holbert, 2014-01-28 Nuclear Energy is one of the most popular texts ever published on basic nuclear physics systems and applications of nuclear energy. This newest edition continues the tradition of offering a holistic treatment of everything the undergraduate engineering student needs to know in a clear and accessible way. The book presents a comprehensive overview of radioactivity, radiation protection, nuclear reactors, waste disposal and nuclear medicine. The seventh edition is restructured into three parts: Basic Concepts, Nuclear Power, including new chapters on

nuclear power plants and introduction to reactor theory and Radiation and Its Uses Part Two in particular has been updated with current developments including a new section on Reactor Safety and Security with a discussion of the Fukushima Daiichi accident updated information on naval and space propulsion and revised and updated information on radioactive waste storage transportation and disposal Part Three features new content on biological effects of radiation radiation standards and radiation detection Coverage of energy economics integrated into appropriate chapters More worked examples and end of chapter exercises Updated final chapter on nuclear explosions for current geopolitical developments
