**Management of Irrigation and Drainage Systems** Hector M. Malano, Paul van Hofwegen, 1999-01-01 This monograph provides an overview of the principles required for a service orientation in the management of irrigation and drainage systems The material covered is designed to emphasize an area largely neglected in the irrigation and drainage management literature The dominating philosophy underlying this book is that irrigation and drainage systems must be managed as a service business responsive to the needs and changing requirements of its customers It is postulated that this service approach to the management of irrigation and drainage systems constitutes a key element of the strategy that is needed to improve the current level of performance of many irrigation and drainage systems worldwide Enhanced performance of irrigation is a prerequisite if we are to face the enormous challenge of producing greater quantities of food to meet the demand of a growing population This is particularly the case in an environment with increasing competition for water from industry and urban water users set against mounting concerns about environmental sustainability

**Modernisation Strategy for National Irrigation Systems in the Philippines** Mona Liza F. Delos Reyes, 2017-07-12 The book presents documentary evidence of the insufficiency of rehabilitation works to close the gap between the irrigation service and actual area irrigated of publicly funded national irrigation systems in the Philippines It outlines a methodology for formulating a modernisation plan for national irrigation systems with focus on the mostly ungauged medium to small canal irrigation systems The proposed methodology adaptively modified some known modernisation concepts and techniques and integrated them in a more holistic framework in the context of changing weather patterns and river flow regimes It includes in depth review of rehabilitation works system diagnosis revalidation of design assumptions on percolation and water supply characterisation of system management irrigation service and demand and drawing up of options and a vision for the modernised irrigation systems Central to the proposed modernisation strategy is the logical coherence among the design of physical structures

system operation and water supply so that improvements of irrigation service are possible The book discusses the development of the proposed methodology and demonstrates its utility in two case study irrigation systems     **Asian Irrigation in Transition** Ganesh Shivakoti,2005-11-23 There is today a crucial need to revamp the management and governance of water systems in Asia in order to cater to the increasing demands of a growing group of users with diverse needs urban settlements industry food producers and environmental needs This book includes essays that cover a range of issues that are involved in this endeavor     **Management of Irrigation and Drainage Systems** Hector M. Cosgrove, Frank R. Rijsberman,2014-03-18 More than a billion people cannot get safe drinking water half the world's population does not have adequate sanitation within a generation over three billion will be suffering from water stress This text analyzes the issues in this crisis of management and shows how water can be used effectively and

productively The key to sustainable water resources is an integrated approach The authors assert that careful planning and concerted action can make the fundamental changes needed and that the implications of not dealing with the crisis are immense The book comes with downloadable resources containing background research and scenarios **Disaster Risk Reduction in Agriculture** Mukhtar Ahmed, Shakeel Ahmad, 2023-11-02 This book is related to disaster risk reduction in agriculture particularly under changing climate Climate change refers to significant long term changes in the global climate There is unequivocal evidence that Earth is warming at an unprecedented rate Human activity is the principal cause The planets average surface temperature has risen to about 1oC since the late 19th century and most of the warming occurred in the past 40 years The years 2016 and 2020 are tied for the warmest year on the record Similarly other evidence of rapid climate change includes warming of oceans shrinking of ice sheets retreating glaciers decreasing snow cover rising of sea level declining arctic sea ice increased frequency of extreme events ocean acidification and loss of biodiversity Hence climate change impacts both extreme weather and slow onset events have impacted several sectors of the national economies and activities in particular agriculture and food production augmented by other challenges be it geopolitical cost of finance or supply chain related and in a time of increased food insecurity Without CO2 fertilization effective adaptation and genetic improvement each degree Celsius increase in global mean temperature would on average reduce global yields of wheat by 6 0% rice by 3 2% maize by 7 4% and soybean by 3 1% Hence this book is useful as a study material to teach in the field of agriculture and climate change The book is useful for instructors and postgraduate as well as undergraduate students involved in the study of climate change The book also provide guidance to multiple stakeholders to design mitigation and adaptation efforts to climate change and ensure food security in the developing world **The Philippine Agricultural Scientist** ,2012 Wastewater Treatment and Sludge Management Systems - The Gutter-to-Good Approaches Başak Kılıç Taşeli, Eduardo Jacob-Lopes, Leila Queiroz Zepka, Mariany Deprá, 2025-03-26 Wastewater treatment plants are essential in mitigating the environmental impact of untreated wastewater being released into natural water sources However for long term ecological sustainability the focus of wastewater treatment must go beyond mere pollution control It should also prioritize energy resource efficiency and waste reduction A key component of this process is the management of sewage sludge an unavoidable byproduct primarily resulting from phase change processes Although it makes up only about 1 2% of the treated wastewater sewage sludge contains most of the original pollutants Sewage sludge is a solid residue produced during wastewater treatment and its generation is inevitable even with proper management The treatment and disposal of this sludge however pose significant challenges These include high treatment costs the presence of emerging pollutants health risks and public acceptance issues Traditional methods such as storage and incineration have raised concerns regarding their environmental and societal impacts prompting the search for alternative sludge management solutions Managing sludge effectively requires a comprehensive and systematic approach that balances environmental benefits social

acceptability and economic feasibility With sludge production continuing to rise globally due to factors like population growth urbanization and industrial development the need for sustainable sludge treatment and management has never been more critical Investing in sustainable and reliable wastewater treatment solutions is crucial for industries and municipalities aiming to reduce their environmental footprint and optimize resource use Sludge management has become one of the most significant challenges for wastewater treatment plants because improper disposal contributes to land and water pollution and poses serious biological risks threatening public health This book aims to facilitate collaboration between academic leaders and industry decision makers creating actionable strategies and insights to address the challenges in sludge management and promote sustainable solutions

**Understanding Water in a Dry Environment** Ian Simmers,2003-01-01

In order to provide water security in the twenty first century there is universal agreement that a continuation of current policies and extrapolation of trends is not an option Also clear is that from both water supply and development perspectives the world s arid and semi arid regions are those currently and potentially experiencing the highest
