Natural Language Parsing Systems:

Natural Language Parsing Systems Leonard Bolc, 2012-12-06 Up to now there has been no scientific publication on natural language research that presents a broad and complex description of the current problems of parsing in the context of Artificial Intelligence. However, there are many interesting results from this domain appearing mainly in numerous articles published in professional journals. In view of this situation, the objective of this book is to enable scientists from different countries to present the results of their research on natural language parsing in the form of more detailed papers than would be possible in professional journals. This book thus provides a collection of studies written by well-known scientists whose earlier publications have greatly contributed to the development of research on natural language parsing. Jaime G. Carbonell and Philip J. Hayes present in their paper 'Robust Parsing Using Multiple Construction Specific Strategies' two small experimental parsers implemented to illustrate the advantages of a multi-strategy approach to parsers with strategies selected according to the type of construction being parsed at any given time. This presentation is followed by the description of a parsing algorithm integrating some of the best features of the two smaller parsers, including case frame instantiation and partial pattern matching strategies.

Natural Language Processing and Information Systems Mokrane Bouzeghoub, Zoubida Kedad, Elisabeth Metais, 2003-06-29 This book includes the papers presented at the fifth International Conference on Application of Natural Language to Information Systems (NLDB 2000) which was held in Versailles, France, on June 28-30. Following NLDB95 in Versailles, NLDB96 in Amsterdam, NLDB97 in Vancouver, and NLDB99 in Klagenfurt, NLDB 2000 was a forum for exchanging new research results and trends on the benefits of integrating Natural Language resources in Information System Engineering. Since the first NLDB workshop in 1995, it has become apparent that each aspect of an information system life cycle may be improved by natural language techniques: database design, specification, validation, conflict resolution, database query languages, and application programming that use new software engineering research: natural language program specifications. As information systems are now evolving into the communication area, the term 'databases' should be considered in the broader sense of information and communication systems. The main new trend in NLDB 2000 is related to the WEB wave: WEB querying, WEB answering, and information retrieval. Among 47 papers submitted from 18 countries, the program committee selected 29 papers to be presented during the conference. Besides these regular papers, two invited talks given by Prof. Reind P. van de Riet and Prof. Maurice Gross, and a set of posters and demonstrations are also included in these proceedings.

Natural Language Processing and Information Systems Farid Meziane, 2004-08-13 This book constitutes the refereed proceedings of the 9th International Conference on Applications of Natural Language to Information Systems (NLDB 2004) held in Salford, UK, in June 2004. The 29 revised full papers and 13 revised short papers presented were carefully reviewed and selected from 65 submissions. The papers are organized in topical sections on natural language conversational systems, intelligent querying, linguistic aspects of modeling information
