W. Francis Everitt, 1975 **The Scientific Letters and Papers of James Clerk Maxwell: Volume 2, 1862-1873** James Clerk Maxwell, 1990 Volume II 1862-1873 contains texts which illuminate Maxwell's scientific maturity In this period he wrote the classic works on field physics and statistical molecular theory which established his unique status in the history of science His important correspondence with Thomson and Tait provides remarkable insight into the major themes of his physics **The Scientific Letters and Papers of James Clerk Maxwell: Volume 1, 1846-1862** James Clerk Maxwell, 1990-10-26 This is a comprehensive edition of Maxwell's manuscript papers published virtually complete and largely for the first time Maxwell's work was of central importance in establishing and developing the major themes of the physics of the nineteenth century his theory of the electromagnetic field and the electromagnetic theory of light and his special place in the history of physics His fecundity of imagination and the sophistication of his examination of the foundations of physics give particular interest and importance to his writings Volume I 1846-1862 documents Maxwell's education and early scientific work and his major period of scientific innovation his first formulation of field theory the electromagnetic theory of light and the statistical theory of gases Important letters and manuscript drafts illuminate this fundamental early work and the volume includes his letters to friends and family general essays and lectures and juvenilia **James Clerk Maxwell** Raymond Flood, Mark McCartney, Andrew Whitaker, 2014-01-09 James Clerk Maxwell 1831-1879 had a relatively brief but remarkable life lived in his beloved rural home of Glenlair and variously in Edinburgh Aberdeen London and Cambridge His scholarship also ranged wide covering all the major aspects of Victorian natural philosophy He was one of the most important mathematical physicists of all time coming only after Newton and Einstein In scientific terms his immortality is enshrined in electromagnetism and Maxwell's equations but as this book shows there was much more to Maxwell than electromagnetism both in terms of his science and his wider life Maxwell's life and contributions to science are so rich that they demand the expertise of a range of academics physicists mathematicians and historians of science and literature to do him justice The various chapters will enable Maxwell to be seen from a range of perspectives Chapters 1 to 4 deal with wider aspects of his life in time and place at Aberdeen King's College London and the Cavendish Laboratory Chapters 5 to 12 go on to look in

more detail at his wide ranging contributions to science optics and colour the dynamics of the rings of Saturn kinetic theory thermodynamics electricity magnetism and electromagnetism with the concluding chapters on Maxwell's poetry and Christian faith

Huxley's Church and Maxwell's Demon Matthew Stanley, 2014-11-24 During the Victorian period the practice of science shifted from a religious context to a naturalistic one It is generally assumed that this shift occurred because naturalistic science was distinct from and superior to theistic science Yet as Huxley's Church and Maxwell's Demon reveals most of the methodological values underlying scientific practice were virtually identical for the theists and the naturalists each agreed on the importance of the uniformity of natural laws the use of hypothesis and theory the moral value of science and intellectual freedom But if scientific naturalism did not rise to dominance because of its methodological superiority then how did it triumph Matthew Stanley explores the overlap and shift between theistic and naturalistic science through a parallel study of two major scientific figures James Clerk Maxwell a devout Christian physicist and Thomas Henry Huxley the iconoclast biologist who coined the word agnostic Both were deeply engaged in the methodological institutional and political issues that were crucial to the theistic naturalistic transformation What Stanley's analysis of these figures reveals is that the scientific naturalists executed a number of strategies over a generation to gain control of the institutions of scientific education and to reimagine the history of their discipline Rather than a sudden revolution the similarity between theistic and naturalistic science allowed for a relatively smooth transition in practice from the old guard to the new

The Physics of Possibility Michael Tondre, 2018-08-16 *The Physics of Possibility* traces the sensational birth of mathematical physics in Victorian literature science and statistics As scientists took up new breakthroughs in quantification they showed how all sorts of phenomena the condition of stars atoms molecules and nerves could be represented as a set of probabilities through time Michael Tondre demonstrates how these techniques transformed the British novel Fictions of development by Charles Dickens George Eliot and others joined the vogue for alternative possibilities Their novels not only reflected received pieties of maturation but plotted a wider number of deviations from the norms of reproductive adulthood By accentuating overlooked elements of form Tondre reveals the novel's changing identification with possible worlds through the decades when physics became a science of all things In contrast to the observation that statistics served to invent normal populations Tondre brings influential modes of historical thinking to the foreground His readings reveal an acute fascination with alternative temporalities throughout the period as novelists depicted the categories of object action and setting in new probabilistic forms Privileging fiction's agency in reimagining historical realities never simply sanctioning them Tondre revises our understanding of the novel and its ties to the ascendant Victorian sciences

The Science of Energy Crosbie Smith, 1998 Although we take it for granted today the concept of energy transformed nineteenth century physics In *The Science of Energy* Crosbie Smith shows how a North British group of scientists and engineers including James Joule James Clerk

Maxwell William and James Thomson Fleeming Jenkin and P G Tait developed energy physics to solve practical problems encountered by Scottish shipbuilders and marine engineers to counter biblical revivalism and evolutionary materialism and to rapidly enhance their own scientific credibility Replacing the language and concepts of classical mechanics with terms such as actual and potential energy the North British group conducted their revolution in physics so astutely and vigorously that the concept of energy a valuable commodity in the early days of industrialization became their intellectual property Smith skillfully places this revolution in its scientific and cultural context exploring the actual creation of scientific knowledge during one of the most significant episodes in the history of physics

Algebraic Art Andrea K. Henderson, 2018 Algebraic Art explores the invention of a peculiarly Victorian account of the nature and value of aesthetic form and it traces that account to a surprising source mathematics Drawing on literature art and photography it explores how the Victorian mathematical conception of form still resonates today

Scientific Evidence Peter Achinstein, 2005-06 Physicists think they have discovered the top quark Biologists believe in evolution But what precisely constitutes evidence for such claims and why Scientists often disagree with one another over whether or to what extent some evidence counts in favor of a theory because they are operating with different concepts of scientific evidence These concepts need to be critically explored Peter Achinstein has gathered some prominent philosophers and historians of science for critical and lively discussions of both general questions about the meaning of evidence and specific ones about evidence for particular scientific theories Contributors Peter Achinstein The Johns Hopkins University Steven Gimbel Gettysburg College Gary Hatfield University of Pennsylvania Frederick M Kronz University of Texas Austin Helen Longino University of Minnesota Deborah G Mayo Virginia Tech Amy L McLaughlin Florida Atlantic University John Norton University of Pittsburgh Lawrence M Principe The Johns Hopkins University Richard Richards University of Alabama Alex Rosenberg Duke University Sherrilyn Roush Rice University Laura J Snyder St Johns University Kent Staley St Louis University
