A Naturalist between Two Worlds. Field Collecting in Claude Gay's Forging of a Scientific Career in Chile and France

In the 1830s, European naturalists traveled to South America to gain experience as field collectors, a practice increasingly important to natural history and the production of scientific knowledge as the nineteenth century progressed. This article explores the strategies followed by the French naturalist Claude Gay (1800–1873) in his attempt to make a name for himself in the eyes of both the Chilean and French scientific communities and governments, as he established his career as a field collector. Gay had to forge credibility among local social circles and hierarchies to win the financial support of the Chilean government, while simultaneously pursuing a career and a reputation as a naturalist in France. This article analyzes Gay's practices and strategies for each community and discusses the extent to which his field practices were influenced not only by the scientific knowledge, experience, and instruments used, but also by the social, political, and economic context in which he developed his scientific work.

This article is part of a special issue entitled "Situated Nature," edited by Déborah Dubald and Catarina Madruga.

In July 1830, Frenchman Claude Gay sent a letter to Chilean governmental authorities requesting funding for a scientific expedition in the young republic, which had claimed independence just over a decade earlier. In addition to the publication of the results of his natural history research, Gay promised to create a natural history cabinet in the capital city of Santiago.¹ According to Gay's proposal, this space dedicated to natural knowledge, the first of its kind in independent Chile, would house and display collections of most of the nation's natural specimens, under their common and scientific names.² This scientific project coincided with a long-time aspiration of the Chilean elite and authorities, who had been unsuccessfully promoting the formation of a natural history cabinet since the beginning of the country's independence process in the 1810s.³ The government's interest in a scientific expedition of this type went beyond the cabinet as it felt an urgent need to understand the full extent of the nation's land and the potential of its natural resources for industry and trade.⁴

Obtaining the support of the Chilean government placed Gay in an advantageous situation compared with other foreign naturalists who, like him, had ventured to destinations outside of Europe that were little known to European science. He did so to carry out in situ research, based on collecting natural history objects, and to build his reputation as a scientist, as part of the community of naturalists associated with the *Muséum National d'Histoire naturelle* in Paris, where he studied.⁵ The fieldwork Gay was seeking to

Naturalist In Two Worlds:

The Ottawa Naturalist ,1912 Biocivilisations Predrag Slijepcevic,2023-05-18 Biocivilisations is a fascinating original and important exploration into how complex civilisations existed on Earth long before humans What is life This is arguably the most important question in all of science Many scientists believe life can be reduced to mechanistic factors such as genes and information codes Everything can be sequenced and explained But in a world as rich and complex as this one can such an assertion really be true A growing army of scientists philosophers and artists do not share this mechanistic vision for the science of life The gene metaphor is not only too simplistic but also misleading If there is a way to reduce life to a single principle how does that principle acknowledge the creativity of life that turns both genetic and information determinism on their heads Biocivilisations is a groundbreaking book exploring the mysteries of life and its deep uncertainty Dr Predrag Slijepcevi turns anthropocentric scientific thinking on its head showing how the humble bacteria created the equivalent of cities and connected them with information highways bringing our planet to life three thousand million years ago He explains how bacteria amoebas plants insects birds whales elephants and countless other species not only preceded human beings but also demonstrate elements of complex civilisation communication agriculture science art medicine and more that we associate with human achievement More than 99.99 percent of life on Earth has existed without humanity and life will continue without humans long into the future Biocivilisations is an important rethinking of the current scientific paradigm It challenges us to reconsider the limited scope and time window of our current scientific revolution and to fundamentally reimagine what we call life on Earth The Naturalist ,1894 The New Naturalists (Collins New Naturalist Library, Book 82) Peter Marren,2010-08-19 A history of the most successful significant and long running natural history series in the world
