Naturalized Reptiles And Amphibians Of The World:

Naturalized Reptiles and Amphibians of the World Christopher Lever, 2003 This book describes how the various alien reptiles and amphibians now living in the wild throughout the world were first introduced how they subsequently became naturalized their present distribution and status in those countries to which they were introduced and their ecological and socio economic impact if any on the native biota and local economies Many species have had a more or less neutral impact being neither beneficial nor harmful However several have had a positive ecological or socio economic impact while some such as the cane toad have had an extremely destructive effect The criteria for inclusion of a species are that it should have been imported from its natural range to a new country by human agency either accidentally or deliberately and that it should currently be established in the wild in self maintaining and self perpetuating populations unsupported by and independent of mankind

Naturalised Birds of the World Christopher Lever, 2010-01-29 This book looks at the world's naturalised successfully introduced species of bird Many species have been introduced to countries outside their natural range by people either deliberately or accidentally with varied consequences for both those species themselves and the native fauna of their new homes In Britain the introduced Canada Goose has quickly become ubiquitous at every lake and riverside while the Golden Pheasant remains a scarce and unobtrusive inhabitant of a few scattered remote woodlands The House Sparrow and Common Starling both in decline over parts of their native range are thriving in a naturalised state in North America and elsewhere in the world Naturalised populations of Mallard in various parts of the world are threatening a total of seven other duck species with extinction through hybridisation This book discusses each species in turn describing how why when and where its introduction took place how it became established and the ecological and economic impacts its presence has had in the country or countries it is naturalised in Each account has a map showing natural and introduced range and there is a wealth of beautiful line drawings of the species concerned

Exotic Amphibians and Reptiles of the United States Walter E. Meshaka Jr., Suzanne L. Collins, R. Bruce Bury, Malcolm L. McCallum, 2022-02-15 **Reptiles and Amphibians of the Pacific Islands** George R. Zug, 2013-06-28 The Pacific is not only the world's largest body of water its vast expanse also includes an extraordinary number and diversity of oceanic islands from Palau and the Marianas east of the Philippines to Cocos Island and the Galapagos west of the Americas The isolation of these islands and the extreme distances between them long prevented scientists from studying their floras and faunas in a comparative context But now George R. Zug one of the world's foremost experts on the diverse reptiles and amphibians of the Pacific Basin offers the first such systematic overview in more than half a century Reptiles and Amphibians of the Pacific Islands is a compendium of frogs lizards snakes and turtles living on these lands and in the adjacent waters of the oceanic islands in the tropical Pacific The means to identify each species is included along with entries that describe each animal's form coloration habitat distribution reproductive biology and natural history Color plates of more than 75 percent of the species also help to facilitate visual

identification This accessible and informative guide is the most comprehensive field guide available and will appeal to both novice sightseers and professional naturalists

Lost Land of the Dodo Anthony Cheke, Julian P. Hume, 2009-01-01 The Mascarene islands in the southern Indian Ocean Mauritius Reunion and Rodrigues were once home to an extraordinary range of birds and reptiles Evolving on these isolated volcanic islands in the absence of mammalian predators or competitors the land was dominated by giant tortoises parrots skinks and geckos burrowing boas flightless rails the birds and tortoises were slaughtered indiscriminately while introduced rats cats pigs and monkeys destroyed their eggs the once extensive forests logged and invasive introduced plants from all over the tropics devastated the ecosystem The now familiar icon of extinction the Dodo was gone from Mauritius within 50 years of human settlement and over the next 150 years many of the Mascarenes other native vertebrates followed suit The product of over 30 years research by Anthony Cheke Lost Land of the Dodo provides a comprehensive yet hugely enjoyable account of the story of the islands changing ecology interspersed with human stories the islands biogeographical anomalies and much else Many French publications old and new especially for Reunion are discussed and referenced in English for the first time The book is richly illustrated with maps and contemporary illustrations of the animals and their environment many of which have rarely been reprinted before Illustrated box texts look in detail at each extinct vertebrate species while Julian Hume's superb colour plates bring many of the extinct birds to life Lost Land of the Dodo provides the definitive account of this tragic yet remarkable fauna and is a must read for anyone interested in islands their ecology and the history of our relationship with the world around us

Status of Conservation and Decline of Amphibians Harold Heatwole, Jodi Rowley, 2018-06-01 Amphibians are among the most threatened groups of animals on earth In part due to their highly permeable skin amphibians are highly sensitive to environmental changes and pollution and provide an early warning system of deteriorating environmental conditions The more we learn about the impact of environmental changes on amphibians the better we as humans will be able to arrest their demise and our own Status of

Conservation and Decline of Amphibians brings together the current knowledge on the status of the unique frogs of Australia New Zealand and the Pacific Although geographically proximate each region presents unique challenges and opportunities in amphibian research and conservation This book contributes to an understanding of the current conservation status of the amphibians of each region aims to stimulate research into halting amphibian declines and provides a better foundation for making conservation decisions It is an invaluable reference for environmental and governmental agencies researchers policy makers involved with biodiversity conservation and the interested public

Handbook of Alien Species in Europe

Delivering Alien Invasive Species,2008-11-14 Biological invasions by alien non native species are widely recognized as a significant component of human caused global environmental change and the second most important cause of biodiversity decline Alien species threaten many European ecosystems and have serious environmental economic and health impacts The DAISIE Delivering Alien Invasive Species Inventories for Europe project has now brought together all available information on alien species in Europe terrestrial aquatic and marine and from all taxa fungi plants animals Thus for the first time an overview and assessment of biological invasions in the Pan European region is finally possible The Handbook of Alien Species in Europe summarises the major findings of this groundbreaking research and addresses the invasion trends pathways and both economic as well as ecological impact for eight major taxonomic groups Approximately 11 000 alien species recorded in Europe are listed and fact sheets for 100 of the most invasive alien species are included each with a distribution map and colour illustration The book is complemented by a regularly updated internet database providing free additional information With its highly interdisciplinary approach DAISIE and its Handbook will be the basis for future scientific investigations as well as management and control of alien invasive species in Europe

Conservation of Caribbean Island Herpetofaunas Volume 1: Conservation Biology and the Wider Caribbean Adrian Hailey,Byron S. Wilson,Julia A. Horrocks,2011-04-07 Most of the islands of the Caribbean have long histories of herpetological exploration and discovery and even longer histories of human mediated environmental degradation Collectively they constitute a major biodiversity hotspot a region rich in endemic species that are threatened with extinction This two volume series documents the existing status of herpetofaunas including sea turtles of the Caribbean and highlights conservation needs and efforts Previous contributions to West Indian herpetology have focused on taxonomy ecology and evolution particularly of lizards This series provides a unique and timely review of the status and conservation of all groups of amphibians and reptiles in the region This volume introduces the issues particularly affecting Caribbean herpetofaunas and gives an overview of evolutionary and taxonomic patterns influencing their conservation Chapters focus on groups that have been relatively neglected in the Caribbean amphibians and snakes A major chapter describes the problem of invasive species of amphibians and reptiles in the West Indies Three chapters then deal with islands of the Wider Caribbean that share many of the same problems but fall outside the West Indies biogeographic region the Atlantic islands of the Bermuda group the Dutch continental shelf islands of Aruba Cura ao and Bonaire and the Neotropical islands of Trinidad and Tobago The book will be useful to biologists and conservationists working in or visiting the Caribbean and internationally as a summary of the

current situation in this diverse and important region Field Guide to the Frogs of Australia Frank Knight, Michael Tyler, 2020-03-02 Throughout much of the world frog populations are declining with the survival of many species under threat In Australia several species have become extinct in the past 35 years This second edition of Field Guide to the Frogs of Australia provides fully updated accounts of all the known frogs of Australia There are 248 species within the five native frog families Hylidae Limnodynastidae Microhylidae Myobatrachidae and Ranidae Also included are the introduced Cane Toad and nine stowaway species that have arrived in Australia Each species account includes details of size status distribution habitat behaviour and advertisement call Species are beautifully illustrated with full colour paintings and distribution maps are also included Closely related frogs are shown in identical poses so that comparisons can be made readily The introductory section of the book covers frog biology and habitats and includes notes on families and genera **Restoring the Oceanic Island Ecosystem** Isamu Okochi, Kazuto Kawakami, 2010-03-15 Loss of biodiversity on tropical and subtropical oceanic islands is one of the most pressing conservation issues These oceanic islands are well known for their unique fauna and flora which evolved over long periods in isolation from external perturbation However the majority of these islands in the Pacific were eventually settled by Polynesians and then by Europeans by about 200 years ago only a few island groups remained untouched The Bonin Islands are one of these groups The Bonin Island group is one of the most remote in the world The islands are located 1 000 km south of Japan off the eastern fringe of Eurasia They were first discovered by the Japanese in 1670 settled by Westerners from Hawaii in 1830 and finally recognized as a Japanese territory in 1862 on condition that previous settlers would be protected and allowed to remain with full rights Because of this complicated history the Bonins have two names **Ecology and Management of Terrestrial Vertebrate Invasive Species in the United States** William C. Pitt, James Beasley, Gary W. Witmer, 2017-10-25 Vertebrate invasive species are important ecologically socially and scientifically throughout much of the globe However the interdiction and options for management of invasive species are driven by localized regulation at the country or even state level and thus the management of species must be framed within that context This book is focused around the management of invasive vertebrate species in the United States although readers will find much of the material broadly applicable to invasive species in other regions Vertebrate invasive species cause damage to agriculture property natural resources and threaten human health and safety However most of these species occur in the United States resulting from human mediated activities often being released intentionally For the first time the wealth of scientific information about vertebrate invasive species in the United States is summarized and synthesized in a single volume to be easily accessible to ecologists and natural resource managers With a focus on prominent terrestrial invasive species that have a history of policy and management and highlighting contemporary issues and management this book consists of 18 chapters written by experts from across the United States The first section of the book focuses on overarching policy and management topics associated with vertebrate invasive species including biosecurity

threats and risk assessment policy and regulation and the economics of their management The second section provides in depth reviews of noteworthy invasive mammals birds amphibians and reptiles After finishing this book the reader should understand the complexity of managing invasive species the unique challenges that each new species may present and the steps forward that may decrease the impact of these species on the environment human health and the economy

Conservation of Caribbean Island Herpetofaunas Volume 2: Regional Accounts of the West Indies Adrian Hailey, Byron Wilson, Julia Horrocks, 2011-04-07 Most of the islands of the Caribbean have long histories of herpetological exploration and discovery and even longer histories of human mediated environmental degradation Collectively they constitute a major biodiversity hotspot a region rich in endemic species that are threatened with extinction This two volume series documents the existing status of herpetofaunas including sea turtles of the Caribbean and highlights conservation needs and efforts Previous contributions to West Indian herpetology have focused on taxonomy ecology and evolution particularly of lizards This series provides a unique and timely review of the status and conservation of all groups of amphibians and reptiles in the region This volume provides regional accounts of the islands of the West Indies biogeographic region

Non-native Species and Their Role in the Environment Radu Cornel Guiaşu, 2016-08-01 The young field of invasion biology initially a branch of ecology and conservation biology has greatly expanded particularly in the last two and a half decades or so As a result the potential negative effects of introduced species have been widely advertised and sometimes perhaps overemphasized This book attempts to restore some balance to the current debate over the role of non native species by offering a broader perspective and taking a longer term evolutionary look at these species and their impact in their new environments The relatively arbitrary nature of terms such as native and non native and the rather inconsistent ways in which such terms are applied to biological species as well as the subjective boundaries of so called native ranges are analyzed The role of non native species in their new environments can be considerably more complex than the anti introduced species information would often suggest Thus the more positive and nuanced perspective on introduced species and their impact offered in this book is much needed and long overdue

Biological Invasions David Pimentel PhD, 2011-05-23 The impact of invasive species is second only to that of human population growth and associated activities as a cause of the loss of biodiversity throughout the world In the United States invasions of nonnative plants animals or microbes cause major environmental damage The second edition of *Biological Invasions Economic and Environmental Cos*
