*Design of Interpretable Fuzzy Systems* Krzysztof Cpałka, 2017-01-31 This book shows that the term interpretability goes far beyond the concept of readability of a fuzzy set and fuzzy rules It focuses on novel and precise operators of aggregation inference and defuzzification leading to flexible Mamdani type and logical type systems that can achieve the required accuracy using a less complex rule base The

individual chapters describe various aspects of interpretability including appropriate selection of the structure of a fuzzy system focusing on improving the interpretability of fuzzy systems designed using both gradient learning and evolutionary algorithms It also demonstrates how to eliminate various system components such as inputs rules and fuzzy sets whose reduction does not adversely affect system accuracy It illustrates the performance of the developed algorithms and methods with commonly used benchmarks The book provides valuable tools for possible applications in many fields including expert systems automatic control and robotics

**Hybrid Artificial Intelligence Systems** Emilio Corchado,Xindong Wu,Erkki Oja,Bruno Baruaque,2009-06-22 The 4th International Conference on Hybrid Artificial Intelligence Systems HAIS 2009 as the name suggests attracted researchers who are involved in developing and applying symbolic and sub symbolic techniques aimed at the construction of highly robust and reliable problem solving techniques and bringing the most relevant achievements in this field Hybrid intelligent systems have become increasingly popular given their capabilities to handle a broad spectrum of real world complex problems which come with inherent imprecision uncertainty and vagueness high dimensionality and nonstationarity These systems provide us with the opportunity to exploit existing domain knowledge as well as raw data to come up with promising solutions in an effective manner Being truly multidisciplinary the series of HAIS conferences offers an interesting research forum to present and discuss the latest theoretical advances and real world applications in this exciting research field This volume of Lecture Notes in Artificial Intelligence LNAI includes accepted papers presented at HAIS 2009 held at the University of Salamanca Salamanca Spain June 2009 Since its inception the main aim of the HAIS conferences has been to establish a broad and interdisciplinary forum for hybrid artificial intelligence systems and associated learning paradigms which are playing increasingly important roles in a large number of application areas

Multiple Approaches to Intelligent

Systems Ibrahim F. Imam, Yves Kodratoff, Ayman El-Dessouki, Moonis Ali, 2004-05-19 We never create anything We discover and reproduce The Twelfth International Conference on Industrial and Engineering Applications of Artificial Intelligence and Expert Systems has a distinguished theme It is concerned with bridging the gap between the academic and the industrial worlds of Artificial Intelligence AI and Expert Systems The academic world is mainly concerned with discovering new algorithms approaches and methodologies however the industrial world is mainly driven by profits and concerned with producing new products or solving customers problems Ten years ago the artificial intelligence research gap between academia and industry was very broad Recently this gap has been narrowed by the emergence of new fields and new joint research strategies in academia Among the new fields which contributed to the academic industrial convergence are knowledge representation machine learning searching reasoning distributed AI neural networks data mining intelligent agents robotics pattern recognition vision applications of expert systems and others It is worth noting that the end results of research in these fields are usually products rather than empirical analyses and theoretical proofs Applications of such technologies have found great success in many domains including fraud detection internet service banking credit risk and assessment telecommunication etc Progress in these areas has encouraged the leading corporations to institute research funding programs for academic institutes Others have their own research laboratories some of which produce state of the art research

**Prerational Intelligence: Adaptive Behavior and Intelligent Systems Without Symbols and Logic , Volume 1, Volume 2 Prerational Intelligence: Interdisciplinary Perspectives on the Behavior of Natural and Artificial Systems, Volume 3** Holk Cruse, Jeffrey Dean, Helge Ritter, 2013-11-11 The present book is the product of conferences held in Bielefeld at the Center for interdisciplinary Studies ZiF in connection with a year long ZiF Research Group with the theme Prerational intelligence The premise explored by the research group is that traditional notions of intelligent behavior which form the basis for much work in artificial intelligence and cognitive science presuppose many basic capabilities which are not trivial as more recent work in robotics and neuroscience has shown and that these capabilities may be best understood as emerging from interaction and cooperation in systems of simple agents elements that accept inputs from and act upon their surroundings The main focus is on the way animals and artificial systems process information about their surroundings in order to move and act adaptively The analysis of the collective properties of systems of interacting agents however is a problem that occurs repeatedly in many disciplines Therefore contributions from a wide variety of areas have been included in order to obtain a broad overview of phenomena that demonstrate complexity arising from simple interactions or can be described as adaptive behavior arising from the collective action of groups of agents To this end we have invited contributions on topics ranging from the development of complex structures and functions in systems ranging from cellular automata genetic codes and neural connectivity to social behavior and evolution Additional contributions discuss traditional concepts of intelligence and adaptive behavior 1

#### **Representation and Management of Narrative**

**Information** Gian Piero Zarri, 2009-06-29 A big amount of important economically relevant information is buried within the huge mass of multimedia documents that correspond to some form of narrative description Due to the ubiquity of these narrative resources being able to represent in a general accurate and effective way their semantic content i e their key meaning is then both conceptually relevant and economically important In this book we present the main properties of NKRL Narrative Knowledge Representation Language a language expressly designed for representing in a standardised way the meaning of complex multimedia narrative documents NKRL is a fully implemented language environment The software exists in two versions an ORACLE supported version and a file oriented one Written from a multidisciplinary perspective this exhaustive description of NKRL and of the associated knowledge representation principles will be an invaluable source of reference for practitioners researchers and graduates

*Understanding Intelligence* Rolf Pfeifer, Christian Scheier, 2001-07-27 The book includes all the background material required to understand the principles underlying intelligence as well as enough detailed information on intelligent robotics and simulated agents so readers can begin experiments and projects on their own By the mid 1980s researchers from artificial intelligence computer science brain and cognitive science and psychology realized that the idea of computers as intelligent machines was inappropriate The brain

does not run programs it does something entirely different But what Evolutionary theory says that the brain has evolved not to do mathematical proofs but to control our behavior to ensure our survival Researchers now agree that intelligence always manifests itself in behavior thus it is behavior that we must understand An exciting new field has grown around the study of behavior based intelligence also known as embodied cognitive science new AI and behavior based AI This book provides a systematic introduction to this new way of thinking After discussing concepts and approaches such as subsumption architecture Braitenberg vehicles evolutionary robotics artificial life self organization and learning the authors derive a set of principles and a coherent framework for the study of naturally and artificially intelligent systems or autonomous agents This framework is based on a synthetic methodology whose goal is understanding by designing and building The book includes all the background material required to understand the principles underlying intelligence as well as enough detailed information on intelligent robotics and simulated agents so readers can begin experiments and projects on their own The reader is guided through a series of case studies that illustrate the design principles of embodied cognitive science
