**Nature** Geerat J. Vermeij, 2006 From humans to hermit crabs to deep water plankton all living things compete for locally limiting resources This universal truth unites three bodies of thought economics evolution and history that have developed largely in mutual isolation Here Geerat Vermeij undertakes a groundbreaking and provocative exploration of the facts and theories of biology economics and geology to show how processes common to all economic systems competition cooperation adaptation and feedback govern evolution as surely as they do the human economy and how historical patterns in both human and nonhuman evolution follow from this principle Using a wealth of examples of evolutionary innovations Vermeij argues that evolution and economics are one Powerful consumers and producers exercise disproportionate controls on the characteristics activities and distribution of all life forms Competition driven demand by consumers when coupled with supply side conditions permitting economic growth leads to adaptation and escalation among organisms Although disruptions in production halt or reverse these processes temporarily they amplify escalation in the long run to produce trends in all economic systems toward greater power higher production rates and a wider reach for economic systems and their strongest members Despite our unprecedented power to shape our surroundings we humans are subject to all the economic principles and historical trends that emerged at life s origin more than 3 billion years ago Engagingly written brilliantly argued and sweeping in scope *Nature An Economic History* shows that the human institutions most likely to preserve opportunity and adaptability are after all built like successful living things

Nathaniel Wolloch, 2016-10-04 From antiquity to our own time those interested in political economy have with almost no exceptions regarded the natural physical environment as a resource meant for human use Focusing on the period 1600 1850 and paying particular attention to major figures including Adam Smith T R Malthus David Ricardo and J S Mill this book provides a detailed overview of the intellectual history of the economic consideration of nature from antiquity to modern times It shows how even someone like Mill who was clearly influenced by romantic notions regarding the spiritual need for contact with pristine nature ultimately regarded it as an economic resource Building on existing scholarship this study demonstrates how the rise of modern sensitivity to nature from the late eighteenth century in particular was in fact a dialectical reaction to the growing distance of modern urban civilization from the natural environment As such the book offers an unprecedentedly detailed overview of the intellectual history of economic considerations of nature whilst underlining how the history of this topic has been remarkably consistent

**An Essay on the Nature and Significance of Economic Science** Lionel Robbins, 2007 This book by Lionel Robbins first appeared in 1932 as an outstanding English language statement of the Misesian view of economic method namely that economics is a social science and must advance its

propositions by means of deductive reasoning and not through the methods used in the natural sciences The case is argued here with patience and attention to scholarly details The unfortunate second edition of this book which is more available today introduces confusions by departing from Austrian microeconomic theory Thus does the Mises Institute celebrate the 75th anniversary of the first edition with this reprint Reading Robbins writes Samuel Bostaph of the University of Dallas is an excellent way of contrasting his explanation of the basic nature of economics with that of the Austrian School as found in the work of Mises as an extension of Carl Mengers s foundations Such a reading wonderfully clarifies one s understanding of the basic conception of economics as a science of human action rather than one of mere economizing **From Political**

**Economy to Economics** Dimitris Milonakis,Ben Fine,2009-01-13 Economics has become a monolithic science variously described as formalistic and autistic with neoclassical orthodoxy reigning supreme So argue Dimitris Milonakis and Ben Fine in this new major work of critical recollection The authors show how economics was once rich diverse multidimensional and pluralistic and unravel the processes that lead to orthodoxy s current predicament The book details how political economy became economics through the desocialisation and the dehistoricisation of the dismal science accompanied by the separation of economics from the other social sciences especially economic history and sociology It is argued that recent attempts from within economics to address the social and the historical have failed to acknowledge long standing debates amongst economists historians and other social scientists This has resulted in an impoverished historical and social content within mainstream economics The book ranges over the shifting role of the historical and the social in economic theory the shifting boundaries between the economic and the non economic all within a methodological context Schools of thought and individuals that have been neglected or marginalised are treated in full including classical political economy and Marx the German and British historical schools American institutionalism Weber and Schumpeter and their programme of Social konomik and the Austrian school At the same time developments within the mainstream tradition from marginalism through Marshall and Keynes to general equilibrium theory are also scrutinised and the clashes between the various camps from the famous Methodenstreit to the fierce debates of the 1930s and beyond brought to the fore The prime rationale underpinning this account drawn from the past is to put the case for political economy back on the agenda This is done by treating economics as a social science once again rather than as a positive science as has been the inclination since the time of Jevons and Walras It involves transcending the boundaries of the social sciences but in a particular way that is in exactly the opposite direction now being taken by economics imperialism Drawing on the rich traditions of the past the reintroduction and full incorporation of the social and the historical into the main corpus of political economy will be possible in the future

**What People Want** Don Ross,1999 This guide takes the reader on an intriguing journey to trace the origins of political economy a phrase that recently came back into vogue as economists and political and moral philosophers rediscovered shared concerns **The Nature and Method of Economic Sciences** Ricardo F. Crespo,2020-03-04 The Nature and

Method of Economic Sciences Evidence Causality and Ends argues that economic phenomena can be examined from five analytical levels a statistical descriptive approach a causal explanatory approach a teleological explicative approach a normative approach and finally the level of application The above viewpoints are undertaken by different but related economic sciences including statistics and economic history positive economics normative economics and the art of political economy Typically positive economics has analysed economic phenomena using the second approach causally explaining and often trying to predict the future evolution of the economy It has not been concerned with the ends selected by the individual or society taking them as given However various new economic currents have emerged during the last 40 years and some of these do assign a fundamental role to ends within economics This book argues that the field of positive economics should adapt to deal with the issues that arise from this The text attempts to discern the nature of economic phenomena introducing the different approaches and corresponding economic sciences It goes on to analyse the epistemological characteristics of these in the subsequent chapters as well as their disciplinary interrelations This book is a valuable resource for students and scholars of the social sciences philosophy and the philosophy of economics It will also be of interest to those researching political economy and the development of economic thought

William Cronon, 2009-11-02 A Finalist for the Pulitzer Prize and Winner of the Bancroft Prize No one has written a better book about a city Nature's Metropolis is elegant testimony to the proposition that economic urban environmental and business history can be as graceful powerful and fascinating as a novel Kenneth T Jackson Boston Globe

**Nature Of Economics, The: Smith, Coase, And The Substitution Structure Of Production** De-xing Guan, 2024-12-13 This book conveys a simple idea that the economic framework established by Smith and Coase is very useful in describing and explaining many facts in the real world Smith's logic in the Wealth of Nations is simply the following the extent of market transactions division of stock division of labor economic growth The logic of Coase in the Coase Theorem is that the delimitation of rights is an essential prelude to market transactions The logic of these two great economists can therefore be combined in a comprehensive way delimitation of rights the extent of market transactions division of stock division of labor economic growth to the author calls this comprehensive version the Smith Coase framework in economics This framework will be repeatedly used in this book to explain various economic problems such as the law of demand growth and development monetary theory and policy among others According to Lucas the approach of this book is classical because it makes no use of utility theory and because a household is truly a small factory la Becker household production function approach will be used to study the behavior of consumers This makes the substitution structure of production the focus of this book We view all economic agents as following the least cost principle meaning that they would try to produce the goods and services they need by using factors of production in the least costly way But there are at least four factors labor capital land and organization if we would like to accept the definition of Marshall What economic agents will do is to substitute one

factor for another in order to save the cost of production The ease of substitution between various factors is therefore important for determining the shape of the substitution structure of production Based on the principle of least cost a simple mathematical model will be derived and used to explain various economic problems      *The Nature of Scientific Innovation, Volume I* David Dent, 2024-12-01 Innovation is a major driver of social economic and environmental change and is researched extensively by academics from disciplines as diverse as business engineering economics sociology and psychology On the whole each discipline pursues its own pathway to understanding without an interdisciplinary framework that links diverse research outputs This partite structure creates a remove from the practical realities of entrepreneurship and the innovators who operate and perceive innovation in its entirety This book delivers insights and creates a different framework one that includes terminologies and typologies greater understanding of paradigmatic influences in science needs vs wants and demand impact and value of knowledge publications and patents and economic benefits It challenges current approaches to education research creativity and skills development infrastructure investment and policy This book addresses changes needed to better deliver innovation at a time when the world is desperate for solutions to global problems It will be of interest to scholars and students of innovation from multiple disciplines as well as practitioners policymakers and all those with an interest in scientific innovation The first volume focuses on the processes the means and the impact of scientific innovation It highlights the way scientific research came to the fore as an instrument of government policy for economic growth the way research is undertaken the structures and processes involved the values biases and limitations associated with them and why these matter for innovation Questions are asked about who innovation is for and whether value is being captured in ways that really matter whether the systems are fit for purpose and how meaningful impact could be delivered to meet societal economic and environmental needs and priorities      **An Analysis of William Cronon's Nature's Metropolis** Cheryl Hudson, 2017-07-28 What caused the rise of Chicago and how did the city's expansion fuel the westward movement of the American frontier and influence the type of society that evolved as a result Nature's Metropolis emerged as a result of William Cronon asking and answering those questions and the work can usefully be seen as an extended example of the critical thinking skill of problem solving in action Cronon navigates a path between the followers of Frederick Jackson Turner author of the thesis that American character was shaped by the experience of the frontier and revisionists who sought to suggest that the rugged individualism Turner depicted as a creation of life in the West was little but a fiction For Cronon the most productive question to ask was not whether or not men forged in the liberty loving furnace of the Wild West had the sort of impact on America that Turner posited but the quite different one of how capitalism and political economy had combined to drive the westward expansion of the US For Cronon individualism was scarcely even possible in a capitalist machine in which humans were little more than cogs and the needs and demands of capital not capitalists prevailed Nature's Metropolis then is a work in which the rise of Chicago is explained by generating alternative possibilities and one that uses a

rigorous study of the evidence to decide between competing solutions to the problem It is also a fine work of interpretation for a large part of Cronon s argument revolves around his attempt to define exactly what is rural and what is urban and how the two interact to create a novel economic force      **Reason and Nature** Morris R. Cohen,2018-12-14 First published in 1931 this volume represents the culmination of twenty years of the study on the principles of science Noticing a widespread craving for philosophical light at a time of scant such offerings Morris R Cohen aimed to demonstrate here the fundamental and ancient connection between nature and science between hearts and minds in an attempt to salve the developing mutual hostility between the two in the 1920s The volume bears particular relation to George Santayana s *Life of Reason* and Bertrand Russell s *Principles of Mathematics* and explores areas including the character of the insurgence against reason and reason in the contexts of the natural and social sciences      *The New Development Economics* Jomo K.S.,Ben Fine,2006 This volume provides a critique of the post Washington Consensus in neoliberal economics      *Journal of Social Forces* ,1924

**Ruling Nature, Controlling People** Luregn Lenggenhager,2018-09-17 Recent nature conservation initiatives in Southern Africa such as communal conservancies and peace parks are often embedded in narratives of economic development and ecological research They are also increasingly marked by militarisation and violence In *Ruling Nature Controlling People* Luregn Lenggenhager shows that these features were also characteristic of South African rule over the Caprivi Strip region in North Eastern Namibia especially in the fields of forestry fisheries and ultimately wildlife conservation In the process the increasingly internationalised war in the region from the late 1960s until Namibias independence in 1990 became intricately interlinked with contemporary nature conservation ecology and economic development projects By retracing such interdependencies Lenggenhager provides a novel perspective from which to examine the history of a region which has until now barely entered the focus of historical research He thereby highlights the enduring relevance of the supposedly peripheral Caprivi and its military scientific and environmental histories for efforts to develop a deeper understanding of the ways in which apartheid South Africa exerted state power      Nature and Artifice David Stack,1998 Thomas Hodgskin 1787 1869 radical thinker is the subject of this study and he is presented here as a forerunner of New Right ideology rather than as early English socialist      **Nature and Nation** Jeyamalar Kathirithamby-Wells,2005-10-31 *Nature and Nation* explores the relations between people and forests in Peninsular Malaysia where the planet s richest terrestrial eco system met head on with the fastest pace of economic transformation experienced in the tropical world It engages the interplay of history culture science economics and politics to provide a holistic interpretation of the continuing relevance of forests to state and society in the moist tropics Malaysia has long been singled out for emulation by developing nations an accolade contradicted in recent years by concerns over its capital rather than poverty driven forest depletion The Malaysian case supports the call for re appraisal of entrenched prescriptions for development that go beyond material needs Book cover      Nature, Choice and Social Power Erica Schoenberger,2014-08-21 We are at an environmental impasse Many

blame our personal choices about the things we consume and the way we live This is only part of the problem Different forms of social power political economic and ideological structure the choices we have available This book analyses how we make social and environmental history and why we end up where we do Using case studies from different environmental domains earth and water air and fire Nature Choice and Social Power examines the form that social power takes and how it can harm the environment and hinder our efforts to act in our own best interests The case studies challenge conventional wisdoms about why gold is valuable why the internal combustion engine triumphed and when and why suburbs sprawled The book shows how the power of individuals the power of classes the power of the market and the power of the state at different times and in different ways were critical to setting us on a path to environmental degradation It also challenges conventional wisdoms about what we need to do now Rather than reducing consumption and shrinking from outcomes we don't want it proposes growing towards outcomes we do want We invested massive resources in creating our problems it will take equally large investments to fix them Written in a clear and engaging style the book is underpinned with a political economy framework and addresses how we should understand our responsibility to the environment and to each other as individuals within a large and impersonal system
