Almost all its mammals are marsupials (mammals with pouches). There are over 150 kinds of Australian marsupials from tiny marsupial mice and moles to marsupial cats. Outside Australia marsupials are only found in South America with just one species in North America.

Madagascar is a huge island off the east coast of Africa. It is bigger than France. About 30 million years ago it came separated from Africa. Nine-tenths of the island's animals and plants are found nowhere else in the world. Its most famous animals are lemurs which are related to monkeys and apes.

### DID YOU KNOW?

The sportive lemur gets its name because, if attacked, it rains down like a boxer and punches its enemy. It feeds on some tree flowers. The tree is covered in sharp spikes but the lemur does not seem to hurt itself as it leaps from stem to stem.

### Roaring chorus

The indri, the largest of the lemurs, lives mostly high up in the tree tops. It uses sound to scare away enemies and call its young. Every morning and evening, families of indris break into wailing songs. Each indri joins in at a different time so the strange chorus may last for many minutes.

### Sun worship

Silakas, or white lemurs, start off each day by lying in the sun for an hour or so. They climb to a tree top and face the sun with their arms outstretched. They do this to warm themselves up after a cool night but local people believed that the lemurs were worshipping the sun.

### Fat store

Dwarf lemurs are amongst the smallest of the lemurs. The fat-tailed dwarf lemur eats insects, leaves and sap. During the rainy season it builds up a fat store under its skin and in its tail. It lives off this supply in the dry season when food is scarce.

### Tenrecs

Another group of mammals found only in Madagascar are tenrecs. There are about 20 species of these small insect-eaters. Some have bristly coats like hedgehogs, others have fur. The common tenrec is the largest insect-eater in Madagascar. It may be as much as 40 cm (16 in) long, about the same size as a cat.

The Sources of Necessity Tobias Wilsch, 2025-03-23 It is a currently popular view that essences laws and logic are among the grounds of necessity and possibility Another such idea relates essences laws and logic closely to causal explanations and to non causal grounding explanations The Sources of Necessity combines those tenets within the view that certain phenomena establish explanations because they exert necessity a modal force on the facts In form of a slogan the explanatory phenomena are the sources of necessity The book investigates this idea and it argues that essences laws and logic are the sources of necessity The investigation contains two different strands one pertaining to explanation and one to necessity In the first strand The Sources of Necessity uses different ways of exerting necessity to analyse the explanatory behaviour of essences laws and logic It investigates the governance of natural laws the interplay of essences and logic in the generation of absolute necessity and the existence and nature of metaphysical laws The second strand concerns the nature of necessity It is argued that necessity is primitive and that there are several equally fundamental species of necessity Two particularly thorny questions about necessity that arise from these insights are Why are the sources of necessity themselves necessary and Why are different kinds of necessity ordered by strength The book develops a rationalist view to answer those questions It says that contingent reality is the result of a cosmogenic sequence that unfolds from essences and logic through the other sources all the way to the contingent facts

human nature Finally noting the essentially contested character of the concept and the ambiguity and redundancy of the terminology she wonders if we should simply eliminate the term human nature altogether *Lloyd's List Law Reports* ,1920
