**Catalogue of the Library of Congress** Library of Congress, 1869      Thinking About Ordinary Things Jan Sokol, 2013-06-01 How to teach philosophy to young dissidents excluded from higher education by the communist regime The author of this book Czech philosopher former dissident software developer and occasional politician tries to carry over this experience into his university lectures It is not a talk about philosophy or philosophers but rather an invitation its aim is first to excite the reader's interest and to lead him or her to think philosophically by himself In some 30 short chapters covering a broad spectrum of topics and followed by questions the reader is shown that philosophy is not only a special discipline but

rather a habit of thought which can and should be applied anywhere

### **Caring for the Soul in a Postmodern Age**

Edward F. Findlay, 2012-02-01 In 1977 the sixty nine year old Czech philosopher Jan Patočka died from a brain hemorrhage following a series of interrogations by the Czechoslovak secret police. A student of Husserl and Heidegger he had been arrested along with young playwright Václav Havel for publicly opposing the hypocrisy of the Czechoslovak Communist regime. Patočka had dedicated himself as a philosopher to laying the groundwork of what he termed a life in truth. This book analyzes Patočka's philosophy and political thought and illuminates the synthesis in his work of Socratic philosophy and its injunction to care for the soul. In bridging the gap not only between Husserl and Heidegger but also between postmodern and ancient philosophy Patočka presents a model of democratic politics that is ethical without being metaphysical and transcendental without being foundational.

*Imagining Climate Engineering* Jeroen Oomen, 2021-05-03 This book highlights the increasing attention for climate engineering, a set of speculative technologies aimed to counter global warming. What is the future of the global climate? And who gets to decide or even design this future? *Imagining Climate Engineering* explores how and why climate engineering became a potential approach to anthropogenic climate change. Specifically it showcases how views on the future of climate change and climate engineering evolved by addressing the ways in which climate engineers view its respective physical, political, and moral domains. Tracing the intellectual and political history of dreams to control the weather and climate as well as the discovery of climate change, Jeroen Oomen examines the imaginative parameters within which contemporary climate engineering research takes place. Introducing the analytical metaphor ways of seeing to describe explicit or implicit visions, understandings, and foci that facilitate a particular understanding of what is at stake, *Imagining Climate Engineering* shows how visions on the knowability of climate tie into moral and political convictions about the possibility and desirability of engineering the climate. Marrying science and technology studies and the environmental humanities, Oomen provides crucial insights for the future of the climate change debate for scholars and students.

Science John Michels (Journalist), 1923 Vols for 1911-13 contain the Proceedings of the Helminthological Society of Washington. ISSN 0018-0120 1st-15th meeting. Light from the East Alexei V. Nesteruk, In this unique volume a new and distinctive perspective on hotly debated issues in science and religion emerges from the unlikely ancient Eastern Orthodox Christian tradition. Alexei Nesteruk reveals how the Orthodox tradition, deeply rooted in Greek Patristic thought, can contribute importantly in a way that the usual Western sources do not. Orthodox thought, he holds, profoundly and helpfully relates the experience of God to our knowledge of the world. His masterful historical introduction to the Orthodox traditions not only surveys key features of its theology but highlights its ontology of participation and communion. From this Nesteruk derives Orthodoxy's unique approach to theological and scientific attribution. Theology identifies the underlying principles (logoi) in scientific affirmations. Nesteruk then applies this methodology to key issues in cosmology: the presence of the divine in creation, the theological meaning of models of creation, the problem of time, and the

validity of the anthropic principle especially as it relates to the emergence of humans and the Incarnation Nesteruk's unique synthesis is not a valorization of Eastern Orthodox thought so much as an influx of startlingly fresh ideas about the character of science itself and an affirmation of the ultimate religious and theological value of the whole scientific enterprise How to Work with Probability and Statistics, Grades 6-8 Smith, 2002 *Teaching of Life Science* Promila Sharma, **The Philosophy of Rabindranath Tagore** Kalyan Sen Gupta, 2016-02-24 The Nobel Prize winner Rabindranath Tagore 1861-1941 the Indian Goethe as Albert Schweitzer called him was not only the foremost poet and playwright of modern India but one of its most profound and influential thinkers Kalyan Sen Gupta's book is the first comprehensive introduction to Tagore's philosophical socio-political and religious thinking Drawing on Rabindranath's poetry as well as his essays and against the background theme of his deep sensitivity to the holistic character of human life and the natural world Sen Gupta explores the wide range of Tagore's thought His idea of spirituality his reflections on the significance of death his educational innovations and his relationship to his great contemporary Gandhi are among the topics that Sen Gupta discusses as are Tagore's views on marriage his distinctive understanding of Hinduism and his prescient concerns for the natural environment The author does not disguise the tensions to be found in Tagore's writings but endorses the great poet's own conviction that these are tensions resolvable at the level of a creative life if not at that of abstract thought *Perceptions of Knowledge Visualization: Explaining Concepts through Meaningful Images* Ursyn, Anna, 2013-10-31 Multisensory perception is emerging as an important factor in shaping current lifestyles Therefore computer scientists engineers and technology experts are acknowledging the comparative power existing beyond visual explanations *Perceptions of Knowledge Visualization Explaining Concepts through Meaningful Images* discusses issues related to visualization of scientific concepts picturing processes and products as well as the role of computing in the advancement of visual literacy skills By connecting theory with practice this book gives researchers computer scientists and academics an active experience which enhances the perception and the role of computer graphics *History of Modern Philosophy* Richard Falckenberg, 2020-07-17 Reproduction of the original *History of Modern Philosophy* by Richard Falckenberg Catalogue ...
