**Moods of the Ohio Moons** Merrill C. Gilfillan, 1991 For almost thirty years Merrill Gilfillan has written outdoor columns devoted primarily to describing and creating moods about the world of nature These columns are informed by a rural background and field notes from more than sixty years of outdoor experience In Gilfillan s words Observation is more of the mind than of vision our attitude is the secret of original observation I choose the subjective approach to outdoor enjoyment I did this after training in zoology and twenty years of field work as a wildlife biologist We should learn to seek our own original view of what we observe The scientific method is necessary to gain facts but the manner in which one experiences the facts is what will determine their final value to the individual and perhaps to society Moods of the Ohio Moons is the

product of this subjective method of observation balanced with scientific knowledge and intended to encourage readers to explore their own individual appreciation and understanding of nature Twelve essays one for each month relate incidents and events weather diagnostic events vegetation and wildlife agriculture trends of land use and the wild harvest that contribute to the mood of the time As Gilfillan demonstrates each month has its mood established primarily by nature and only secondarily by humans

**Food Production and Nature Conservation** Iain J. Gordon, Herbert H.T. Prins, Geoff R. Squire, 2016-11-25 Feeding the world's growing human population is increasingly challenging especially as more people adopt a western diet and lifestyle Doing so without causing damage to nature poses an even greater challenge This book argues that in order to create a sustainable food supply whilst conserving nature agriculture and nature must be reconnected and approached together The authors demonstrate that while the links between nature and food production have to some extent already been recognized until now the focus has been to protect one from the impacts of the other Instead it is argued that nature and agriculture can and should work together and ultimately benefit from one another Chapters describe efforts to protect nature through globally connected protected area systems and illustrate how farming methods are being shaped to protect nature within agricultural systems The authors also point to many ways in which nature benefits agriculture through the ecosystem services it provides Overall the book shows that nature conservation and food production must be considered as equally important components of future solutions to meet the global demand for food in a manner that is sustainable for both the human population and the planet as a whole
