American Sea Power and the Obsolescence of Capital Ship Theory R.B. Watts, 2015-11-16 Since the beginning of the 20th century the United States has sought to achieve Admiral Alfred Thayer Mahan's vision of command of the sea using large battle fleets of capital ships This strategy has been generally successful no force can oppose the U S Navy on the open seas Yet capital ship theory has become increasingly irrelevant Globally irregular warfare dominates the spectrum of conflict especially in the aftermath of 9 11 Fleet engagements are a thing of the past and even small scale missions that rely on

capital ships are challenged by irregular warfare In a pattern evident since World War II the U S Navy has attempted to adapt its capital ship theory to irregular conflicts with mixed results before returning to traditional operations with little or no strategic debate This book discusses the challenges of irregular warfare in the 21st century and the need for U S naval power to develop a new strategic paradigm **Archaeology and the Social History of Ships** Richard A. Gould,2011-04-29 Maritime archaeology deals with shipwrecks and is carried out by divers rather than diggers It embraces maritime history and analyses changes in shipbuilding navigation and seamanship and offers fresh perspectives on the cultures and societies that produced the ships and sailors Drawing on detailed past and recent case studies Richard A Gould provides an up to date review of the field that includes dramatic new findings arising from improved undersea technologies This second edition of *Archaeology and the Social History of Ships* has been updated throughout to reflect new findings and new interpretations of old sites The new edition explores advances in undersea technology in archaeology especially remotely operated vehicles The book reviews many of the major recent shipwreck findings including the Vasa in Stockholm the Viking wrecks at Roskilde Fjord and the Titanic *Military Communications* Christopher H. Sterling,2007-10-16 An alphabetically organized encyclopedia that provides both a history of military communications and an assessment of current methods and applications *Military Communications From Ancient Times to the 21st Century* is the first comprehensive reference work on the applications of communications technology to military tactics and strategy a field that is just now coming into its own as a focus of historical study Ranging from ancient times to the war in Iraq it offers over 300 alphabetically organized entries covering many methods and modes of transmitting communication through the centuries as well as key personalities organizations strategic applications and more *Military Communications* includes examples from armed forces around the world with a focus on the United States where many of the most dramatic advances in communications technology and techniques were realized A number of entries focus on specific battles where communications superiority helped turn the tide including Tsushima 1905 Tannenberg and the Marne both 1914 Jutland 1916 and Midway 1942 The book also addresses a range of related topics such as codebreaking propaganda and the development of civilian telecommunications To Provide and Maintain a Navy: 1775-1945 Captain Richard L. Wright,2022-01-18 The United States Navy evolved from an ill formed collection of merchant vessels privateers and small frigates into the most capable maritime force in world history The author employs an historical narrative that describes this evolution of American warships technology and force structure as opposed to the battles or tactics in which they engaged He examines the history of the U S Navy from the perspective of the American people and their elected and appointed political leadership the President the Congress the Secretaries of the Navy and the captains commodores and admirals who carried out their directives as well as the changing nature of the naval establishment physical infrastructure and human capital that constituted the industrial base in each era The U S Navy is our nation s first line of defense composed of the most capable aircraft carriers surface ships submarines and naval aircraft ever

built It represents an enormous investment of our nation s treasure but is designed built and operates largely out of the public eye Naval professionals and students of naval history should learn the forces that determine how and why we build the ships and aircraft we do and their true value to the American taxpayer Rearming for the Cold War, 1945-1960 Elliott Vanveltner Converse,2012 Book Description The first publication in a multivolume series on the history of the acquisition of major weapon systems by the Department of Defense author Elliott Converse presents a meticulously researched overview of changes in acquisition policies organizations and processes within the United States military establishment during the decade and a half following World War II Many of the changes that shaped the nature and course of weapons research and development production and contracting through the end of the century were instituted between 1945 and 1960 many of the problems that have repeatedly challenged defense policymakers and acquisition professionals also first surfaced during these years This study is the first to combine the histories of the Office of the Secretary of Defense OSD and the military services into one account The volume is organized chronologically with individual chapters addressing the roles of OSD the Army Navy and Air Force in two distinct periods **History of Acquisition in the Department of Defense, Volume 1** Elliott V. Converse,2012-06-12 This volume is a history of the acquisition of major weapon systems by the United States armed forces from 1945 to 1960 the decade and a half that spanned the Truman and Eisenhower administrations following World War II These instruments of warfare aircraft armored vehicles artillery guided missiles naval vessels and supporting electronic systems when combined with nuclear warheads gave the postwar American military unprecedented deterrent and striking power 1 They were also enormously expensive The volume is organized chronologically with individual chapters addressing the roles of OSD the Army Navy and Air Force in two distinct periods The first roughly coinciding with President Truman s tenure covers the years from the end of World War II through the end of the Korean War in 1953 The second spans the two terms of the Eisenhower presidency from 1953 through early 1961 The year 1953 marked a natural breakpoint between the two periods The Korean War had ended President Eisenhower and his defense team began implementing the New Look a policy and strategy based on nuclear weapons which they believed would provide security and make it possible to reduce military spending The New Look s stress on nuclear weapons along with the deployment of the first operational guided missiles and the rapid advances subsequently made in nuclear and missile technology profoundly influenced acquisition in the services throughout the 1950s and the remainder of the century As used in this study the term acquisition encompasses the activities by which the United States obtains weapons and other equipment In surveying the history of acquisition between 1945 and 1960 this study discusses or refers in passing to many of the hundreds of weapon system programs initiated by the services in that period but it is not a weapons encyclopedia Instead it investigates a few major programs in depth in the belief that such detailed examination best reveals the evolution of acquisition policies organizations and processes and the various forces influencing weapons programs *Sea Power* ,1916 **S. 1418, the Methane Hydrate**
