

GUIDANCE, NAVIGATION, AND CONTROL

GUIDANCE

Aiming a spacecraft by controlling the direction of its rocket thrust at launch or any other time the rocket changes speed or direction.

NAVIGATION

Getting from one place to another while in space. This often involves long periods of coasting and short bursts from small rockets to change course.

CONTROL

Orienting a spacecraft in its three axes of rotation (changing the direction it 'faces'). This may be done to aim an antenna, correct course, or dock with another craft.

Suresh, K. Sivan, 2015-11-20 The book addresses the overall integrated design aspects of a space transportation system involving several disciplines like propulsion vehicle structures aerodynamics flight mechanics navigation guidance and control systems stage auxiliary systems thermal systems etc and discusses the system approach for design trade off analysis system life cycle considerations important aspects in mission management the risk assessment etc There are several books authored to describe the design aspects of various areas viz propulsion aerodynamics structures control etc but there is no book which presents space transportation system STS design in an integrated manner This book attempts to fill this gap by addressing systems approach for STS design highlighting the integrated design aspects interactions between various subsystems and interdependencies The main focus is towards the complex integrated design to arrive at an optimum robust and cost effective space transportation system The orbital mechanics of satellites including different coordinate frames orbital perturbations and orbital transfers are explained For launching the satellites to meet specific mission requirements viz payload orbit design considerations giving step by step procedure are briefed The selection methodology for launch vehicle configuration its optimum staging and the factors which influence the vehicle performance are summarized The influence of external internal and dynamic operating environments experienced by the vehicle subsystems and the remedial measures needed are highlighted The mission design strategies and their influence on the vehicle design process are elaborated The various critical aspects of STS subsystems like flight mechanics propulsion structures and materials thermal systems stage auxiliary systems navigation guidance and control and the interdependencies and interactions between them are covered The design guidelines complexity of the flight environment and the reentry dynamics for the reentry missions are included The book is not targeted as a design tool for any particular discipline or subsystem Some of the design related equations or expressions are not attempted to derive from the first principle as this is

beyond the scope of this book However the important analytical expressions graphs and sketches which are essential to provide in depth understanding for the design process as well as to understand the interactions between different subsystems are appropriately included

Flight Dynamics and Control of Aero and Space Vehicles Rama K. Yedavalli,2020-02-25

Flight Vehicle Dynamics and Control Rama K Yedavalli The Ohio State University USA A comprehensive textbook which presents flight vehicle dynamics and control in a unified framework Flight Vehicle Dynamics and Control presents the dynamics and control of various flight vehicles including aircraft spacecraft helicopter missiles etc in a unified framework It covers the fundamental topics in the dynamics and control of these flight vehicles highlighting shared points as well as differences in dynamics and control issues making use of the systems level viewpoint The book begins with the derivation of the equations of motion for a general rigid body and then delineates the differences between the dynamics of various flight vehicles in a fundamental way It then focuses on the dynamic equations with application to these various flight vehicles concentrating more on aircraft and spacecraft cases Then the control systems analysis and design is carried out both from transfer function classical control as well as modern state space control points of view Illustrative examples of application to atmospheric and space vehicles are presented emphasizing the systems level viewpoint of control design

Key features Provides a comprehensive treatment of dynamics and control of various flight vehicles in a single volume Contains worked out examples including MATLAB examples and end of chapter homework problems Suitable as a single textbook for a sequence of undergraduate courses on flight vehicle dynamics and control Accompanied by a website that includes additional problems and a solutions manual The book is essential reading for undergraduate students in mechanical and aerospace engineering engineers working on flight vehicle control and researchers from other engineering backgrounds working on related topics
