Regression Models of Monthly Water-level Change in and Near the Closed Basin Division of the San Luis Valley, South-central Colorado Kenneth R. Watts, 1995 Climate and Cultural Change in Prehistoric Europe and the Near East Peter F. Biehl, Olivier P. Nieuwenhuyse, 2016-11-23 The subject of climate change could hardly be more timely In *Climate and Cultural Change in Prehistoric Europe and the Near East* an interdisciplinary group of contributors examine climate change through the lens of new archaeological and paleo environmental data over the course of more than 10 000 years from the Near East to Europe Key climatic and other events are contextualized with cultural changes and transitions for which the authors discuss when how and if changes in climate and environment caused people to adapt move or perish More than this publication of crucial archaeological and paleo environmental data however the volume seeks to understand the social political and economic significance of climate change as it was manifested in various ways around the Old World Contrary to perceptions of threatening global warming in our popular media and in contrast to grim images of collapse presented in some archaeological discussions of past climate change this book rejects outright societal collapse as a likely outcome Yet this does not keep the authors from considering climate change as a potential factor in explaining culture change by adopting a critical stance with regard to the long standing practice of equating synchronicity with causality and explicitly considering alternative explanations Historical Changes in Precipitation and Streamflow in the U.S. Great Lakes Basin, 1915-2004 Glenn Hodgkins, Robert W. Juracek, 2001 *Technical Bulletin* , 1961 **Changes in Jihadi Discourse in the Wake of the "Islamic State"** Christina Hartmann, 2022-11-10 *Changes in Jihadi Discourse in the Wake of the Islamic State* explores how the transnational jihadi discourse changed with the development of the Islamic State terrorist group and resulted in the fragmentation of the jihadi movement From the Middle East through Africa to South East Asia today's jihadi movement is more fragmented than ever Al Qaida and the Islamic State compete not only with each other but also with local jihadi groups Despite the fact that in the wake of the Islamic State international jihadi groups are in fierce competition for supporters little has been said on how the process of competition as well as external events changed the ideology of these groups and the topics relevant to them Countering dominant research focusing on the differences between jihadi strains this book explores how the appearance and temporary strength of the Islamic State changed the topics and talking points of other jihadi actors such as al Qaida By analyzing primary sources in Arabic and English the author sheds light on the inner and inter jihadi discourse and its development over the years The book does not simply describe changes in topics it traces these changes quantitatively and relates them to external events This book is aimed at academics researchers and postgraduate students interested in political

science security studies jihadism jihadi discourse al Qaida Islamic State and Salafism as well as practitioners and decision makers in government agencies who wish to understand how transnational jihadi discourse has developed over the previous two decades

Effects of Past Global Change on Life Panel on Effects of Past Global Change on Life, Commission on Geosciences, Environment and Resources, Division on Earth and Life Studies, National Research Council, 1995-01-15 What can we expect as global change progresses Will there be thresholds that trigger sudden shifts in environmental conditions or that cause catastrophic destruction of life *Effects of Past Global Change on Life* explores what earth scientists are learning about the impact of large scale environmental changes on ancient life and how these findings may help us resolve today's environmental controversies Leading authorities discuss historical climate trends and what can be learned from the mass extinctions and other critical periods about the rise and fall of plant and animal species in response to global change The volume develops a picture of how environmental change has closed some evolutionary doors while opening others including profound effects on the early members of the human family An expert panel offers specific recommendations on expanding research and improving investigative tools and targets historical periods and geological and biological patterns with the most promise of shedding light on future developments This readable and informative book will be of special interest to professionals in the earth sciences and the environmental community as well as concerned policymakers

Barth,P.I. Haris,2009-09-02 Although infrared spectroscopy has been applied with success to the study of important biological and biomedical processes for many years key advances in this vibrant technique have led to its increasing use ranging from characterisation of individual macromolecules DNA RNA lipids proteins to human tissues cells and their components Infrared spectroscopy thus has a significant role to play in the analysis of the vast number of genes and proteins being identified by the various genomic sequencing projects Whilst this book gives an overview of the field it highlights more recent developments such as the use of bright synchrotron radiation for recording infrared spectra the development of two dimensional infrared spectroscopy and the ability to record infrared spectra at ultrafast speeds The main focus is on the mid infrared region since the great majority of studies are carried out in this region but there is increasing use of the near infrared for biomedical applications and a chapter is devoted to this part of the spectrum Major advances in theoretical analysis have also enabled better interpretation of the infrared spectra of biological molecules and these are covered The editors Professor Andreas Barth of Stockholm University Stockholm Sweden and Dr Parvez I Haris of De Montfort University Leicester U K who both have extensive research experience in biological infrared spectroscopy per se and in its use in the solution of biophysical problems have felt it timely therefore to bring together this book The book is intended for use both by research scientists already active in the use of biological infrared spectroscopy and for those coming new to the technique Graduate students will also find it useful as an introduction to the technique **Alternative**
