In economically privileged countries, overall survival rates have now reached 80% at five years from diagnosis, and most of these young people will become long-term survivors. The Oxford Textbook of Cancer in Children offers state-of-the-art descriptions of the approach needed for the optimal management of children with cancer and guidance on current treatments available due to the advances made over the past decade. This seventh edition has been thoroughly revised and updated, including brand new chapters on cancer immunotherapy in children and cancer in adolescents and young adults, plus expanded treatment of tumours of the brain and central nervous system. With an international and multi-disciplined authorship comprising paediatric oncologists, surgeons, radiotherapists, imaging specialists, psychologists, nurses and many others, the text illustrates how the paediatric oncology community works globally and collaboratively in order to drive forward new therapies, build our knowledge of these diseases and achieve the common aim of curing childhood cancer. In this new edition, Professors Biondi and Caron have been joined by Professor François Doz, who has a distinguished international reputation, particularly in the treatment of childhood brain tumours and retinoblastoma, as well as early drug development.
