Structural Changes and their Econometric Modeling Vladik Kreinovich, Songsak Sriboonchitta, 2018-11-24 This book focuses on structural changes and economic modeling It presents papers describing how to model structural changes as well as those introducing improvements to the existing before structural changes models making it easier to later on combine these models with techniques describing structural changes The book also includes related theoretical developments and practical applications of the resulting techniques to economic problems Most traditional mathematical models of economic processes describe how the corresponding quantities change with time However in addition to such relatively smooth numerical changes economical phenomena often undergo more drastic structural change Describing such structural changes is not easy but it is vital if we want to have a more adequate description of economic phenomena and thus more accurate and more reliable predictions and a better understanding on how best to influence the economic situation Advanced

Mathematical Methods for Finance Julia Di Nunno, Bernt Øksendal, 2011-03-29 This book presents innovations in the mathematical foundations of financial analysis and numerical methods for finance and applications to the modeling of risk. The topics selected include measures of risk, credit contagion, insider trading, information in finance, stochastic control and its applications to portfolio choices and liquidation models of liquidity pricing and hedging. The models presented are based on the use of Brownian motion, Lévy processes and jump diffusions. Moreover, fractional Brownian motion and ambit processes are also introduced at various levels. The chosen blend of topics gives an overview of the frontiers of mathematics for finance. New results, new methods and new models are all introduced in different forms according to the subject. Additionally, the existing literature on the topic is reviewed. The diversity of the topics makes the book suitable for graduate students, researchers and practitioners in the areas of financial modeling and quantitative finance. The chapters will also be of interest to experts in the financial market interested in new methods and products. This volume presents the results of the European ESF research networking program Advanced Mathematical Methods for Finance.

Optimal Mean Reversion Trading: Mathematical Analysis And Practical Applications Tim Siu-tang Leung, Xin Li, 2015-11-26 Optimal Mean Reversion Trading: Mathematical Analysis and Practical Applications provides a systematic study to the practical problem of optimal trading in the presence of mean reverting price dynamics. It is self-contained and organized in its presentation and provides rigorous mathematical analysis as well as computational methods for trading ETFs, options, futures on commodities or volatility indices and credit risk derivatives. This book offers a unique financial engineering approach that combines novel analytical methodologies and applications to a wide array of real world examples. It extracts the mathematical problems from various trading approaches and scenarios but also addresses the practical aspects of trading problems such as model estimation, risk premium, risk constraints and transaction costs. The explanations in the book are detailed enough to capture the interest of the curious student or researcher and complete enough to give the necessary background material for further exploration into the subject and related literature. This book will be a useful tool for anyone interested in financial engineering, particularly algorithmic trading and commodity trading and would like to understand the mathematically optimal strategies in different market environments.

A Machine Learning based Pairs Trading Investment Strategy Simão Moraes Sarmento,Nuno Horta,2020-07-13 This book investigates the application of promising machine learning techniques to address two problems i how to find profitable pairs while constraining the search space and ii how to avoid long decline periods due to prolonged divergent pairs It also proposes the integration of an unsupervised learning algorithm OPTICS to handle problem i and demonstrates that the suggested technique can outperform the common pairs search methods achieving an average portfolio Sharpe ratio of 3.79 in comparison to 3.58 and 2.59 obtained using standard approaches For problem ii the authors introduce a forecasting based trading model capable of reducing the periods of portfolio decline by 75% However this comes at the expense of decreasing overall profitability The authors also test the proposed strategy using an ARMA model an LSTM and an LSTM encoder decoder

Modeling Dependence in Econometrics Van-Nam Huynh, Vladik Kreinovich, Songsak Sriboonchitta, 2013-11-18 In economics many quantities are related to each other Such economic relations are often much more complex than relations in science and engineering where some quantities are independence and the relation between others can be well approximated by linear functions As a result of this complexity when we apply traditional statistical techniques developed for science and engineering to process economic data the inadequate treatment of dependence leads to misleading models and erroneous predictions Some economists even blamed such inadequate treatment of dependence for the 2008 financial crisis To make economic models more adequate we need more accurate techniques for describing dependence Such techniques are currently being developed This book contains description of state of the art techniques for modeling dependence and economic applications of these techniques Most of these research developments are centered around the notion of a copula a

general way of describing dependence in probability theory and statistics To be even more adequate many papers go beyond traditional copula techniques and take into account e g the dynamical changing character of the dependence in economics
