**Global Entrepreneurship and Development Index 2017** Zoltan J. Acs, László Szerb, Ainsley Lloyd, 2017-09-14 This brief presents a detailed look at the entrepreneurial ecosystem of nations around the world by combining individual data with institutional components. Presenting data from the 2017 Global Entrepreneurship and Development Index (GEDI) which measures the quality and scale of the entrepreneurial process from 137 countries worldwide, this book provides a rich understanding of entrepreneurship and a more precise means to measure it. In addition to yearly data and comparison, this 2017 edition also explores the digital entrepreneurial ecosystem and provides a detailed analysis of two measurements of entrepreneurship: the GEDI and the Total Early Stage Entrepreneurial Activity (TEA) measure. Whereas developed countries will be challenged to increase their economic productivity to sustain current standards of living as their populations rapidly age, developing economies will need to integrate more than two billion young adults into the world economy by 2050. How can more than one billion jobs be created in the developing world within this timeframe, especially in the least developed countries where poverty and massive unemployment are already dominant facts of economic life? How can we measure, monitor, and build the ecosystems to produce such growth? The GEDI is designed to profile national systems of entrepreneurship. It links institutions and agents through a National Entrepreneurial System ecosystem in which each biotic and abiotic component is reinforced by the other at the country level. The resulting data gives policymakers a tool for understanding the entrepreneurial strengths and weaknesses of their countries' economies, thereby enabling them to implement policies that foster productive entrepreneurship. The GEDI also helps governments harness the power of entrepreneurship to addres these types of challenges.

**Global Entrepreneurship and Development Index 2015** Zoltan J. Acs, László Szerb, Erkkó Autio, 2015-11-27 This volume provides a detailed look at the entrepreneurial ecosystem of different nations by combining individual data with institutional components. The composite index presented in this book, the Global Entrepreneurship Index (GEI), aims to measure the quality and scale of the entrepreneurial process in 130 countries around the world. The authors have developed a system that links institutions and agents through a National Entrepreneurial System ecosystem in which each biotic and abiotic component is reinforced by the other at a country level. The enclosed data from both individual and country level institutions provides policymakers a tool for understanding the entrepreneurial strengths and weaknesses of their respective economies, thereby enabling the implementation of policies that foster productive entrepreneurship. Distinct from both output based entrepreneurship indexes (i.e. new firm counts) and process based indexes (i.e. comparisons of policies and regulations), the GEI is designed to profile national systems of entrepreneurship. The GEI is a construction of individual and institutional measures that integrates 31 variables from various data sources into 14 pillars, three sub indexes, and a super index. The relationship between entrepreneurship and economic development appears to be more or less mildly S shaped. The findings suggest moving away from simple measures of entrepreneurship across countries, illustrating a U shaped or L shaped relationship to more complex measures which are positively related to development. The

Index also does not focus exclusively on high growth entrepreneurship it also considers the characteristics of entrepreneurship that enhance productivity innovation market expansion being growth oriented and having an international outlook Moreover because entrepreneurship can have both economic and social consequences for the individual the GEI captures the dynamic institutionally embedded interactions between the individual level attitudes abilities and aspirations that drive productive entrepreneurship This unique book will be invaluable for researchers policymakers and entrepreneurs keen to expand their understanding of entrepreneurship and development Bibliography of Asian Studies ,1988 *British Books in Print* ,1985 Entrepreneurial Process in Bangladesh Amanat Ullah Khan,1996 **List of Titles Added to the Catalogue** University of London.
