Palaogeographie Und Tektonik:

Tektonik, Paläogeographie und Fazies des Paläozoikums der Algerischen Ostsahara (Aus dem Blickwinckel der Erdölgeologie). Jörg Hoffmann-Rothe, 1964 Geology Of The Carpathian Region Gabor Z Foldvary, 1988-02-01 This can be best described as a comprehensive volume as there is no one volume of work done on the geology of the entire Carpathian region It is aimed to pave the way for global geologists to examine this tectonically complex and key area and to build up a clear picture about its origin evolution and structure It provides factual geological material for plate tectonicians to work on and to derive basic information from Since it is intended to be comprehensive it will also be a useful source material for professional geologists and specialists in the earth sciences **New Aspects on Tethyan Cretaceous Fossil Assemblages** H.A. Kollmann, H. Zapfe, 2012-12-06 The geologic term Tethys introduced by Eduard Suess 1893 into science was originally a paleogeographic one Since its original description it has been used in various ways One of them is Tethys as a paleo biogeographic concept This concept was adopted for IGCP Project 262 Tethyan Cretaceous Correlation It was proposed by G Czaszar and Heinz A Kollmann and has been approved by the IGCP Board in February 1987 The project has its aims primarily in the improvement of the stratigraphic correlation between the heterogenous facies of the Tethyan realm The requests to paleontology in this programme are of various kinds The delimitation of the Tethyan realm in space and time needs clear statements on the composition of Tethyan faunal or floral assemblages Biozones based on various fossil groups have to be established for biostratigraphic correlation Finally Tethyan bioprovinces have to be established These problems have been discussed in a special meeting of the paleontological group of the project which was held on January 25 27 1988 in Vienna Papers presented at this meeting are published in this volume Zur Stratigraphie, Paläogeographie und Faziesbildung der Hörre-Gommern- und Tanner Systeme Werner Schwan, 1967 Geosynclines Jean Aubouin, 2013-10-22 Geosynclines is devoted to the geosynclines concept which states that the most elevated parts of the earth's crust the mountains had risen by a gigantic inversion of relief from the more depressed regions where they had originated This book re examines the concept in light of further geological evidence The book is organized into four parts Part I presents a detailed account of the birth and development of the geosynclinal concept It shows that only the European Alpine concept of the geosyncline involves a fundamental palaeogeographical differentiation of mountain chains and that it is from this standpoint that the American concept must be considered if it is to be placed in a more general framework Part II attempts to define the geosynclinal concept in the Alpine sense of the term i e in the light of current views on the Mediterranean chains of the Alpine cycle which are the best documented Part III collates the information acquired on the various aspects of geosynclines as exemplified by the Mediterranean chains of the Alpine cycle Part IV discusses the degree to which the Alpine concept of the geosyncline may be extended in time Principles of Geodynamics Adrian E. Scheidegger, 2013-03-09 Geodynamics is an old science Most of the basic theories have been conceived in principle during the 19th century and not many fundamen tal ideas have

been added since Some progress has been made in the following up of these concepts and in some instances in the deter mination of some important facts about the Earth Nevertheless geo dynamics has been a highly speculative subject for about a hundred years and it is not likely that this situation will change during the next hundred It is also unlikely that many basic new ideas will be added in that time interval The reason for this lies in the extreme difficulty of obtaining really relevant data about the mechanics of the Earth partly due to the impossibility of probing into the depths of the Earth by direct means to any considerable extent and partly due to the fact that the time in tervals in which something happens are ofthe order of millions of years which is much too long for any human being to wait and experiment with The situation in geodynamics is therefore much akin to that which existed when the ancient Greek philosophers were speculating about the possibly atomic structure of matter there was at that time absolutely no hope to either confirm or to reject the hypothesis Geology in the Alps J.F.v. Raumer, Franz Neubauer, 2012-12-06 The Alps are an arched mountain chain stretching 1500 km between Vienna and Graz in Austria and Genova in Italy They resulted from the collision of the African and Laurasian plates during Mesozoic and Tertiary times The high standard of knowledge attained over the last 30 years by the working groups on Alpine Metamorphism is well known and helped considerably to recognize pre Mesozoic elements in the Alps In Part I of this book the subdivision of the major Alpine units and pre Mesozoic pal inspastic reconstructions are covered before discussion of the pre Mesozoic geology in Parts II III and IV It is understood that the Mesozoic and later events overprinted pre existing structures veiling the earlier history and the nature of protoliths Although the Alpine overprint does not facilitate the recognition of older struc tures pre Mesozoic basement units were recognized during the first beginnings of geological observations in the Alps about 200 years ago Fifty percent of the Alpine domain is underlain by basement units that have been unconformably covered since Permian and Mesozoic times This basement appears today in a complex pattern among the Alpine structures The history of their discovery and explanation parallel with a growing sophistication of research Jurassic Environments Hallam, 1975-08-14 A review of the methods are the subject of the introductory chapter of Part II advances in Jurassic studies from 1956 to 1975 Abhandlungen der Preussischen Geologischen Landesanstalt, 1920
