Code of Ethics for Nigerian Journalists ,1998      **The Search for Earth's Twin** Stuart G. Clark,2016 In 1995 two Swiss astronomers discovered a planet circling a star other than our Sun This changed our perception of the Universe forever proving that Earth and the other celestial bodies in our Solar System are not alone in outer space Now after two decades of exploration more than 860 planets have been discovered many of which are completely unlike anything else we know Some are blacker than coal some are bathed in molten lava others are perpetually scoured by hurricane force winds some have not one sun but two that rise in the morning and others are perpetually drowned in global oceans But as well as strange uninhabitable lands there is familiarity too Some of these alien worlds are strikingly similar to planets in our Solar System Astronomers now know of planets just like Jupiter Neptune Mars and Mercury orbiting stars similar to our Sun both nearby and deep into space Authoritatively written and fully up to date on this fast moving area of science The Search for the Earth s Twin will take you on a journey through the cosmos via frozen wastelands slow moving globes and fiery volcanic bodies to planets that can and just might sustain complex life The prospect of discovering the Earth s twin is now tantalisingly close

**Earths of Distant Suns** Michael Carroll,2016-10-03 Based on the latest missions results and supported by commissioned artwork this book explores the possible lessons we may learn from exoplanets As the number of known Earth like objects grows significantly the author explores what is known about the growing roster of pale blue dots far afield Aided by an increased sensitivity of the existing observatories recent discoveries by Keck the Hubble Space Telescope and Kepler are examined These findings once thought to be closer to the realm of science fiction have fired the imaginations of the general public as well as scientists All of us are mesmerized by the possibility of other Earth like worlds out there Author Michael Carroll asks the tough questions of what the expected gain is from identifying these Earth analogs spread across the Universe and the reasons for studying them Potentially they could teach us about our own climate and Solar System Also explored are the more remote options of communication between or even travel to these distant yet perhaps not so dissimilar worlds      The Search For Earth's Twin Stuart Clark,2016-07-07 In 1995 two Swiss astronomers discovered a planet circling

a star other than our Sun This changed our perception of the Universe forever proving that Earth and the other celestial bodies in our Solar System are not alone in outer space Now after a decade of exploration more than 860 planets have been discovered many of which are completely unlike anything else we know Some are blacker than coal some are bathed in molten lava others are perpetually scoured by hurricane force winds some have not one sun but two that rise in the morning and others are perpetually drowned in global oceans But as well as strange uninhabitable lands there is familiarity too Some of these alien worlds are strikingly similar to planets in our Solar System Astronomers now know of planets just like Jupiter Neptune Mars and Mercury orbiting stars similar to our Sun both nearby and deep into space Authoritatively written and fully up to date on this fast moving area of science The Search for the Earth s Twin will take you on a journey through the

cosmos via frozen wastelands slow moving globes and fiery volcanic bodies to planets that can and just might sustain complex life The prospect of discovering the Earth's twin is now tantalisingly close Exoplanets Donald Goldsmith, 2018-09-10 Astronomers have recently discovered thousands of exotic planets that orbit stars throughout our Milky Way galaxy With his characteristic wit and style Donald Goldsmith shows how these observations have already broadened our planetary horizons and tells us what may come next including the ultimate discovery life beyond our home planet

*Just A Thought* Peter Borthwick, 2023-09-14 This book is a diverse read offering chapters covering multiple subjects but all linked into the same theme It explores many of the things we have been misinformed about in mainstream media education and religion A chapter by chapter in depth look at various subjects that challenge what we think we know It ultimately proposes an alternative way of thinking and assessing what we have all been informed of through different platforms The book explores the author and some of the key things that have affected his life guiding him to this point now where he wants to share some of his experiences This includes his love of spirituality and the guidance that has been provided to him throughout his life It s an often humorous story with honest snippets from youth through to adulthood It explores all the good and bad aspects of the human experience and his acceptance that it is all part of the journey The second chapter covers our recent technological boom This explores the authors thoughts on how we have progressed so quickly over the last 100 years with a thought provoking challenge as an explanation A look at our history and all the many holes in what we have been informed about through education and religion that frankly do not hold up now with science throwing curve balls into our previous understanding of our past The chapter covers such things as structural anomalies around the world our true origins and the various differing species of humanity that have occupied this planet and many more issues the author has found through his investigations Through Government disclosure and personal accounts the next chapter looks at the subject of are we alone in this universe Starting way back in history and finishing right up to date it looks at the overwhelming evidence that would suggest we are not alone from witness reports abduction cases to crop circles This chapter provides some compelling and fact based evidence to support the authors ideas Following on from the previous chapter the author looks at our planet and its place in the universe covering the mind boggling numbers that are attached to the incredible size of the known universe and our tiny insignificant place within it It further highlights the facts presented in the previous chapter that discusses are we truly alone in a universe that is difficult to comprehend with its true and enormous size Moving away from historical information the author comes right up to date with a chapter about the modern world He questions that have we really got it right and has life truly improved with all the stress and mental health issues being highlighted these days An example being emails Emails were meant to make life quicker and easier yet in reality they

have had a negative effect Regardless of whether you work in an office or a building site you have to factor into your daily life time to look at and respond to emails It s something twenty five years ago did not exist but the world still worked giving us something else to factor into what is not enough time in most people s day It was meant to improve and ease our existence but does it The final chapter tidies up other subjects missed in the book that would be discussed later plus some detailed spiritual experience s the author has had through his life that he wanted to share This book although is deep and meaningful it is none the less easy to read and follow and certainly thought provoking It is a most enjoyable and recommended read
