Policy Exploration Through Microanalytic Simulation:

Policy Exploration Through Microanalytic Simulation Guy H. Orcutt, Steven Caldwell, Richard F. Wertheimer, 1976

Practical Microsimulation Modelling Cathal O'Donoghue, 2021 This book brings together a description and examples of the main methods used in microsimulation modelling used in the field of income distribution analysis It is structured to develop and use the different types of models used in the field with a focus on household targeted policy Microsimulation Modelling of the Corporate Firm Frank W. van Tongeren, 2013-03-09 My interest in microsimulation started to develop when I was exposed to the works of Guy Orcutt and his associates on microsimulation of households in the USA and those of Gunnar Eliasson and his associates on simulation of Swedish firms Their approaches promised the exciting possibility to represent an by simulating the behaviour of individual microeconomic entire economic system units on a computer The construction of a large scale microsimulation model seemed to be a worthwhile adventure which could yield much more detailed results than existing models It was also evident that microsimulation of firms is a relatively underdeveloped area in spite of the large number of operational microsimulation models of households in the USA and Europe Developing the computer implementation has been an integral part of the research Translating initially vague ideas into mathematical formulae and subsequently into a structured computer language provides a testing ground for 10Bical consistency of ideas When writing this book I have purposefully abstained from describing the computer program and dedicated solution algorithms The reason is that the book is primarily directed towards readers interested in economics and therefore uses the language of economics and not that of computer science The simulation model has been programmed for the personal computer in Turbo Pascal Sophisticated memory management techniques have lifted constraints on the number of firms which can be simulated on the PC Small Area Estimation and Microsimulation Modeling Azizur Rahman, Ann Harding, 2016-11-30 Small Area Estimation and Microsimulation Modeling is the first practical handbook that comprehensively presents modern statistical SAE methods in the framework of ultramodern spatial microsimulation modeling while providing the novel approach of creating synthetic spatial microdata Along with describing the necessary theories and their advantages and limitations the authors illustrate the practical application of the techniques to a large number of substantive problems including how to build up models organize and link data create synthetic microdata conduct analyses yield informative tables and graphs and evaluate how the findings effectively support the decision making processes in government and non government organizations Features Covers both theoretical and applied aspects for real world comparative research and regional statistics production Thoroughly explains how microsimulation modeling technology can be constructed using available datasets for reliable small area statistics Provides SAS codes that allow readers to utilize these latest technologies in their own work This book is designed for advanced graduate students academics professionals and applied practitioners who are generally interested in small area estimation and or microsimulation modeling and dealing

with vital issues in social and behavioural sciences applied economics and policy analysis government and or social statistics health sciences business psychology environmental and agriculture modeling computational statistics and data simulation spatial statistics transport and urban planning and geospatial modeling Dr Azizur Rahman is a Senior Lecturer in Statistics and convenor of the Graduate Program in Applied Statistics at the Charles Sturt University and an Adjunct Associate Professor of Public Health and Biostatistics at the University of Canberra His research encompasses small area estimation applied economics microsimulation modeling Bayesian inference and public health He has more than 60 scholarly publications including two books Dr Rahman s research is funded by the Australian Federal and State Governments and he serves on a range of editorial boards including the International Journal of Microsimulation IJM Professor Ann Harding AO is an Emeritus Professor of Applied Economics and Social Policy at the National Centre for Social and Economic Modelling NATSEM of the University of Canberra She was the founder and inaugural Director of this world class Research Centre for more than sixteen years and also a co founder of the International Microsimulation Association IMA and served as the inaugural elected president of IMA from 2004 to 2011 She is a fellow of the Academy of the Social Sciences in Australia She has more than 300 publications including several books in microsimulation modeling

Methods of Interregional and Regional Analysis Walter Isard,Iwan J. Azis,Matthew P. Drennan,Ronald E. Miller,Sidney Saltzman,Erik Thorbecke,2017-07-05 This landmark textbook introduces students to the principles of regional science and focuses on the key methods used in regional analysis including regional and interregional input output analysis econometrics regional and spatial programming and industrial and urban complex analysis gravity and spatial interaction models SAM and social accounting welfare analysis and applied general interregional equilibrium models The coherent development of the materials contained in the set of chapters provides students with a comprehensive background and understanding of how to investigate key regional problems For the research scholar this publication constitutes an up to date source book of the basic elements of each major regional science technique More significant it points to new directions for future research and ways interregional and regional analytic approaches can be fused to realise much more probing attacks on regional and spatial problems a contribution far beyond what is available in the literature

Systems Approaches and Their Application Mats-Olov Olsson,Gunnar Sjöstedt,2006-01-16 This book describes the application of systems thinking across a broad field of cases representing research teaching decision support and construction All cases are presented by experts who have actually been involved in the activities they describe The broad selection of cases captures the great variation of systems thinking and how it is integrated into models and theories and solid knowledge pertaining to different substantive areas

Evidence-Based Policy Making in the Social Sciences Stoker, Gerry,Evans, Mark,2016-09-29 This book gathers an expert group of social scientists to showcase emerging forms of analysis and evaluation for public policy analysis Each chapter highlights a different method or approach putting it in context and highlighting its key features before illustrating its

application and potential value to policy makers Aimed at upper level undergraduates in public policy and social work it also has much to offer policy makers and practitioners themselves A Feasible Basic Income Scheme for Germany Maximilian Sommer,2016-03-01 This book analyzes the consequences that would arise if Germany's means tested unemployment benefits were replaced with an unconditional basic income The basic income scheme introduced is based on a negative income tax and calibrated to be both financially feasible and compatible with current constitutional legislation Using data from the German Socio Economic Panel GSOEP the author examines the impact of the reform on the household labor supply as well as on both poverty and inequality measures It is shown that by applying reasonable values for both the basic income and the implied marginal tax rate imposed on earned incomes efficiency gains can be reconciled with generally accepted value statements Furthermore as the proposal includes a universal basic income for families child poverty could be reduced considerably The estimates are based on the discrete choice approach to labor supply *New Frontiers in Microsimulation Modelling* Ann Harding,2017-10-19 In the past fifteen years microsimulation models have become firmly established as vital tools for analysis of the distributional impact of changes in governmental programmes Across Europe the US Canada and Australia microsimulation models are used extensively to assess who are the winners and losers from proposed policy reforms this is now expanding into new frontiers both geographically and in terms of policy areas With contributions from more than 60 international experts this volume offers a comprehensive introduction to the state of microsimulation internationally illustrating a wide range of new applications and approaches It will be of relevance to government policy makers social policy planners economists and those concerned with predicting the impact of public policy change and to academics in a variety of disciplines especially social and public policy human geography development studies and economics

The CEPHID modelling project Robert E. Wright,1992 This project is a complex set of micro simulation models and databases which allows users from a wide variety of disciplines to construct and evaluate forecasts and simulations concerned with the causes and consequences of Canada's aging population Chapter 1 is a brief statement by three representatives of the major funding agencies of the project Chapter 2 is an overview of the CEPHID project Chapter 3 presents a series of projections of health status attributes of the elderly Chapter 4 describes the FADEP model which is a major component of the CEPHID project In Chapter 5 CEPHID is used to project the future needs for informal care amongst the elderly Chapter 6 shows how CEPHID can be used to examine a tightly defined problem Finally Chapters 7 and 8 look at methods of micro simulation as models to study a variety of substantive issues Complexity and Planning Gert de Roo,Jean Hillier,2016-05-23 Complexity complex systems and complexity theories are becoming increasingly important within a variety of disciplines While these issues are less well known within the discipline of spatial planning there has been a recent growing awareness and interest As planners grapple with how to consider the vagaries of the real world when putting together proposals for future development they question how complexity complex systems and complexity theories might prove useful

with regard to spatial planning and the physical environment This book provides a readable overview presenting and relating a range of understandings and characteristics of complexity and complex systems as they are relevant to planning It recognizes multiple relational approaches of dynamic complexity which enhance understandings of and facilitate working with contingencies of place time and the various participants behaviours In doing so it should contribute to a better understanding of processes with regard to our physical and social worlds **Journal of Human Services Abstracts** ,1977

Urban-Rural Interactions Eveline van Leeuwen,2010-03-10 Modern Europe has rural roots Even today as much as 90 per cent of Europe EU25 consists of rural areas in which half of the population lives While different rural areas often face different challenges the shift from agricultural production towards a multifunctional landscape and the increasing value assigned to environmental values affect all rural areas The ambition to develop a more diversified rural economy as well as the bottom up approach and local focus of many rural policies require a clear knowledge of the current socio economic function of towns and town hinterland linkages Therefore the aim of this study is to contribute to the understanding of the current function of towns in Europe in general and in the Netherlands more specifically By using both micro and macro approaches the multifaceted relationships between town hinterland and the rural economy are explored at different spatial levels and for different actors in particular for households farms and firms **The Possibility of Politics** Stein

Ringen,2017-09-04 The Possibility of Politics explores the power of political reform specifically reform of the modern welfare state Can reform be effective if limited to cautious and piecemeal interventions that avoid radicalism and revolution Can it also avoid unwanted consequences Will the welfare state survive in the future Stein Ringen views the welfare state as a large scale experiment in political reform To ask if the welfare state works is to ask if political reform is possible at all By its nature the welfare state is reform on a grand scale for it attempts to change the circumstances individuals and families live under without changing and disrupting society itself But is it realistic to believe a population can get together set goals and then try to meet these goals through collective actions specifically public policies without causing unintended consequences and destroying the state in the process The welfare state attempts idealistically to redistribute welfare without reshaping the economic processes that cause inequities in the first place Ringen considers how well redistribution has met the test in terms of political legitimacy its intended effects on poverty and inequality as well as its undesired and unintended effects on economic efficiency and the quality of private life Ultimately does the welfare state work Further is the welfare state a good thing In considering these questions The Possibility of Politics should be of particular value to academics and advanced students interested in political theory public economics social administration and political sociology Stein Ringen is professor of sociology and social policy at Oxford University and a Fellow of Green College He teaches social and political theory and research methodology for graduates in social policy sociology politics economic and social history and other subjects

Proceedings ,1985 *Prolonged Connections* Steven Ruggles,1987 *A Subtle Balance* Edward A. Parson,2015-06-15

A Subtle Balance critically reflects on major trends and enduring challenges over the last four decades of public policy and governance. During this time a tension has existed between two aims for public decisions: that they be based on the best available evidence and analysis and that they be fully democratic. This period has seen a continuing drive for more direct citizen engagement in decision making and governments trying to address major policy issues through novel consultative and collaborative processes. In essays that offer detailed and novel insights into the recent history of specific issues in social policy, environmental policy and processes of policy advice and decision making, contributors elaborate on how these trends have played out in diverse areas of practice, what their consequences have been and how specific institutional reforms could reset the requisite balance between expertise, evidence and democracy in Canadian public policy. Inspired by the wide ranging contributions to scholarship and practice of A. R. Rod Dobell, A Subtle Balance draws on the influences of distinguished scholars and sophisticated practitioners of public policy to assess recent changes in governance. Contributors include Martin Bunton, Barry Carin, Ian Clark, Rachel Culley, Rod Dobell, Lia Ernst, Jill Horwitz, John Langford, Justin Longo, Michael Prince, Harry Swain, Charles Ungerleider, Josee van Eijndhoven, Michael Wolfson and David Zussman.
