that lie beyond our immediate grasp If you like this book write a review *The Law of Cryonics* Pierre de Gioia Carabellese,Camilla Della Giustina,2024-03-19 This book through the lens of interdisciplinary legal analysis draws a subtle balance between bioethics and financial regulation with the latter playing an unexpectedly crucial role in the way life may potentially be governed The legal topic of human preservation or cryoconservation was initially developed in the United States in the case of *Donaldson v van de Kamp* More recently the subject arose in Europe as a result of a decision of the High Court Family Division London This new theme of cryoconservation has unfolded through multifaceted forms including its impact on regulation In an area that may at least prima facie be regarded as belonging to the traditional realm of medical law the findings presented here suggest that its potential has strong economic implications The work argues that it is necessary also to look at this subject from a more interdisciplinary perspective drawing a fil rouge between two otherwise seemingly opposing areas of law medical law and financial regulation The legal framework draws on the Anglo American and the United Kingdom in particular along with civil law analysis from Italy The work will be of interest to researchers and academics in the areas of medical law legal philosophy financial law property law and insurance law *The Fountain of Youth* Stephen G. Post,Robert H. Binstock,2004-04-08 If effective anti aging interventions were achieved they would likely bring about profound alterations in the experiences of individual and collective life What if modern scientists could find the modern equivalent to the Fountain of Youth that Ponce de Leon sought This book addresses this question by exploring the ramifications of possible anti aging interventions on both individual and collective life Through a series of essays it examines the biomedical goal of prolongevity from cultural scientific religious and ethical perspectives offering a sweeping view into the future of aging *Ageless Nation* Michael G. Zey,2017-07-05 In this intriguing volume futurist and author Michael G Zey imagines a time in which technology has stretched human life spans to four hundred years or more Genetic engineering cloning and stem cell technology will eradicate diseases and allow for nanoscopic repair and maintenance of the body Smart drugs and caloric restriction programs will largely stop aging and ensure healthy bodies and sharp minds indefinitely Grounding his speculation in contemporary scientific research Zey s optimistic vision sees retirement replaced by hiatuses between careers and leisure time spent in multi generational homes Key players in the debate include supporters like Cambridge University scientist Aubrey de Grey who envisions five thousand year life spans and the radical futurist author Ray Kurzweil who foresees the merging of humans and computers Organizations such as the Coalition to Extend Life lobby the government for immortality research funding and find opposition in the President s Council on Bioethics and deep ecologists advocating zero population growth Criticizing current environmental trends as anti progress and anti human Zey s own solutions include controversial measures like human control of weather colonization of outer space and genetically modifying food He concludes that the eventuality of a modern Fountain of Youth is closer than we think Zey s predictions about the future are thoughtful and fascinating **Mortality and Morality** Hans Jonas,1996-07-08 Hans Jonas a pupil of

Heidegger and a colleague of Hannah Arendt at the New School for Social Research was one of the most prominent phenomenologists of his generation. This carefully chosen anthology of Jonas's shorter writings on topics from Jewish philosophy to philosophy of religion to philosophy of biology and social philosophy reveals their range without obscuring their central unifying thread: that as living biological beings we are also beings who die and who must consider the implications for current and future ethical and social relations.
