Brown,2008-12-16 This text started out as a revised version of Buildings by the second named author 53 but it has grown into a much more voluminous book The earlier book was intended to give a short friendly elementary introduction to theory accessible to readers with a minimal background Moreover it approached buildings from only one point of view sometimes called the old fashioned approach A building is a simplicial complex with certain properties The current book includes all the material of the earlier one but we have added a lot In particular we have included the modern or W metric approach to buildings which looks quite different from the old fashioned approach but is equivalent to it This has become increasingly important in the theory and applications of buildings We have also added a thorough treatment of the Moufang property which occupies two chapters And we have added many new exercises and illustrations Some of the exercises have hints or solutions in the back of the book A more extensive set of solutions is available in a separate solutions manual which may be obtained from Springer s Mathematics Editorial Department We have tried to add the new material in such a way that readers who are content with the old fashioned approach can still get an elementary treatment of it by reading selected chapters or sections In particular many readers will want to omit the optional sections marked with a star The introduction below provides more detailed guidance to the reader **Recent Advances in Algebraic Geometry** Christopher D. Hacon,Mircea Mustaţă,Mihnea Popa,2015-01-15 Contemporary research in algebraic geometry is the focus of this collection which presents articles on modern aspects of the subject The list of topics covered is a roll call of some of the most important and active themes in this thriving area of mathematics the reader will find articles on birational geometry vanishing theorems complex geometry and Hodge theory free resolutions and syzygies derived categories invariant theory moduli spaces and related topics all written by leading experts The articles which have an expository flavour present an overall picture of current research in algebraic geometry making this book essential for researchers and graduate students This volume is the outcome of the conference Recent Advances in Algebraic Geometry held in Ann Arbor Michigan to honour
