Drazen, Santosh Nigam, Takao Shimizu, 2003-04-30 This volume the Proceedings of the 12th International Conference on Advances in Prostaglandin Leukotriene and Other Bioactive Lipid Research Basic Science and Clinical Applications held August 25 29 2002 in Istanbul Turkey discusses advances in bioactive lipid research with special attention to cancer cardiovascular diseases gastrointestinal diseases and respiratory diseases Specific topics covered include the role of leukotrienes and lipoxins in inflammation the cytochrome P450 pathway the genetics and genomics of bioactive lipids lipid peroxidation apoptosis angiogenesis isoprostanes receptors and inhibitors cyclooxygenase and lipoxygenase pathways and inhibitors prostaglandin synthases and receptor signaling phospholipases and inhibitors Prostaglandins, Leukotrienes, and the Immune Response John L. Ninnemann, 1988-09-30 This study looks at the way the products of arachidonic acid metabolism are active both in normal and abnormal immune responses While some of the fundamental issues such as whether lymphocytes are capable of producing prostaglandins and leukotrienes are still hotly debated the evidence is overwhelming that many specific immunological problems and disease states are associated with alterations in the normal balance of arachidonic acid metabolism This book provides a review of the history and chemistry of the arachidonic acid cascade as well as an exhaustive survey of the literature concerning the interaction of arachidonic acid metabolites with cells of the immune system The author also presents and discusses the evidence demonstrating prostaglandin and leukotriene participation in response to injury and in malignancy tissue and organ rejection rheumatoid arthritis autoimmunity and allergy **Advances in Prostaglandin and Leukotriene Research** Bengt Samuelsson, Rodolfo Paoletti, Giancarlo Folco, E. Granström, S. Nicosia, 2002-01-31 This volume is the proceedings of the 11th International Conference on Advances in Prostaglandin and Leukotriene Research Basic Science and New Clinical Applications held in Florence Italy on June 4 8 2000 which continues the tradition of covering both basic and clinical aspects of prostaglandin and leukotriene research At this meeting particular emphasis was given to the potential application of the novel COX 2 inhibitors the genetics of asthma relating to the production of leukotrienes and novel cellular networks for the production of leukotrienes and lipoxins Traditionally as has been done in past meetings of this series a considerable amount of new material was presented and discussed this year with particular attention given to the newest clinical data **Prostaglandins, Leukotrienes and Other Eicosanoids** Friedrich Marks, Gerhard Fürstenberger, 2008-11-21 Polyunsaturated fatty acids are essential for human cell metabolism As precursors of a very large and extremely versatile family of signaling compounds they play a key role in

intracellular communication Eicosanoids constitute one of the most abundant and prominent subfamilies of these fatty acid derivatives which are formed primarily along oxidative pathways Prostaglandins leukotrienes and related eicosanoids have a modulatory function in mammalian cells and are responsible for tissue responses such as inflammation or wound repair Increasing activity in eicosanoid research sheds new light on today's most common diseases including atherosclerosis cancer Alzheimer's allergies and rheumatic diseases The recent advances already have far reaching implications in medicine This detailed account written by leading experts covers the ground breaking developments in recent eicosanoid research The topics span eicosanoid biogenesis new aspects of their pathophysiology for example their influence on the cardiovascular system as well as the clinical application of synthetic eicosanoids and their antagonists Researchers and students working in biochemistry or in pharmaceutical physiological medicinal and neurochemistry will value this informative introduction to one of the most rapidly developing fields in cell biology

Recent Advances in Prostaglandin, Thromboxane, and Leukotriene Research Helmut Sinzinger, Bengt Samuelsson, Sir John R. Vane, Rodolfo Paoletti, Peter Ramwell, Patrick Y-K Wong, 2013-11-11 The International Symposium on Prostaglandins and Related Compounds first held in Vienna 1972 revisited the city after 24 years for the 10TH Symposium For the many researchers working in this multi disciplinary field it was an opportunity to exchange their experiences and share new data with colleagues from all around the world This scientific exchange was largely encouraged by the unseasonably cold and rainy weather For the first time there was quite a large attendance from the former Communist countries Eugene Garfield prepared a key note address delivered during the meeting The Scientist 1996 12 reviewing the contribution of the Nobel Laureates U S von Euler I R Vane S K Bergstrom and B I Samuelsson discussing the relevance of the more than 40 000 papers in this area published since 1991 Overall there is still a rapidly growing interest and in particular a great variety of clinical applications of this family of compounds which were discussed in detail during the meeting Beside the lectures there were 19 workshops covering nearly all the topics of key interest All the speakers were invited to prepare a manuscript which has resulted in the volume now in your hands Special thanks to Dr Patrick Wong and the new publisher of this series who helped to publish the proceedings in the usual quality and reasonable period of time Looking forward to seeing all of you again in Florence in 1999 hopefully with much more sun
