Gardens have made major in-kind contributions. The result of 20 years' work by botanists and conservationists around the world, it is intended as a conservation tool, a provider of baseline information to measure conservation progress and as a primary source of data on plant species. Most importantly, however, it provides the building blocks on which to base a worldwide effort to conserve plant species. Phytochemistry of Australia's Tropical Rainforest Cheryll J. Williams, 2021-12

Rare, unique and irreplaceable precious native rainforests occupy a precariously small part of Australia while retaining a remarkable level of both biological and chemical diversity unrivalled by any other ecosystem. Australia's ancient history and traditions are intimately intertwined with the rainforest plants that humans have utilised as both food and medicine. Phytochemistry of Australia's Tropical Rainforest is a record of this history and details how our understanding of these plants has led to the discovery of anaesthetics, analgesics, steroids, antimalarials and more. It provides an insight into the habitat ecology and family associations of hundreds of species and explores their future therapeutic potential alongside phytochemical studies of the ancient plant lineages. Toxicological evaluations of important poisonous plants are also included. Rainforests provide shelter for unique flora and fauna that are counted among the rarest species on Earth, many of which are illustrated in this book. This comprehensive work is an essential reference for phytochemists, ethnobotanists and those with an interest in rainforests and their medicinal and botanical potential. The Victorian Naturalist, 1927 Annual Plant Reviews, Phosphorus Metabolism in Plants William Plaxton, Hans Lambers, 2015-03-20

The development of phosphorus (P)-efficient crop varieties is urgently needed to reduce agriculture's current over-reliance on expensive environmentally destructive non-renewable and inefficient P-containing fertilizers. The sustainable management of P in agriculture necessitates an exploitation of P-adaptive traits that will enhance the P-acquisition and P-use efficiency of crop plants. Action in this area is crucial to ensure sufficient food production for the world's ever-expanding population and the overall economic success of agriculture in the 21st century. This informative and up-to-date volume presents pivotal research directions that will facilitate the development of effective strategies for bioengineering P-efficient crop species. The 14 chapters reflect the expertise of an international team of leading authorities in the field who review information from current literature, develop novel hypotheses and outline key areas for future research. By evaluating aspects of vascular plant and green algal P-uptake and metabolism, this book provides insights as to how plants sense, acquire, recycle, scavenge and use P, particularly under the naturally occurring condition of soluble inorganic phosphate deficiency that characterises the vast majority of unfertilised soils worldwide. The reader is provided with a full appreciation of the diverse information concerning plant P-starvation responses as well as the crucial role that plant-microbe interactions play in plant P-acquisition. Annual Plant Reviews Volume 48 Phosphorus Metabolism in Plants is an important resource for plant geneticists, biochemists and physiologists as well as horticultural and environmental research workers, advanced students of plant science and university lecturers in related disciplines. It is an essential addition to the shelves of university and research institute libraries and agricultural and

ecological institutions teaching and researching plant science **Systematic Catalogue of the Soft Scale Insects of the World** Ben-Dov, 1993-01-01 A catalogue of the soft scale insects of the world Homoptera Coccoidea Coccidae with data on geographical distribution host plants biology and economic importance This catalogue lists 162 genera comprising 1090 species and subspecies which have been described since Linnaeus 1758 until the cutoff date of December 1991 Extensive data are presented on taxonomy nomenclature synonyms geographical distribution host plants biology and economic importance of the species New combinations are established for 40 species One species namely *Filippia subterranea* Gomez Menor Ortega is newly synonymized with *Lecanopsis formicarum* Newstead
