Birks, Gerald H. Meier, Frederick S. Pettit, 2006-03-30 A straightforward treatment describing the oxidation processes of

metals and alloys at elevated temperatures This 2006 second edition retains the fundamental theory but incorporates

advances made in understanding degradation phenomena The first half provides an authoritative introduction to the basic

principles covering thermodynamics and mechanisms of high temperature corrosion of metals and alloys The latter half

extends the discussion to oxidation processes in complex systems from reactions in mixed environments to protective

techniques including coatings and atmosphere control The authors provide a logical and expert treatment of the subject

producing a revised edition that will be a comprehensive guide to material scientists and engineers requiring an

understanding of this elementary process Research Opportunities in Corrosion Science and Engineering National

Research Council, Division on Engineering and Physical Sciences, National Materials Advisory Board, Committee on Research

Opportunities in Corrosion Science and Engineering, 2011-01-27 The field of corrosion science and engineering is on the

threshold of important advances Advances in lifetime prediction and technological solutions as enabled by the convergence of

experimental and computational length and timescales and powerful new modeling techniques are allowing the development

of rigorous mechanistically based models from observations and physical laws Despite considerable progress in the

integration of materials by design into engineering development of products corrosion considerations are typically missing

from such constructs Similarly condition monitoring and remaining life prediction prognosis do not at present incorporate

corrosion factors Great opportunities exist to use the framework of these materials design and engineering tools to stimulate

corrosion research and development to achieve quantitative life prediction to incorporate state of the art sensing approaches

into experimentation and materials architectures and to introduce environmental degradation factors into these capabilities

Research Opportunities in Corrosion Science and Engineering identifies grand challenges for the corrosion research

community highlights research opportunities in corrosion science and engineering and posits a national strategy for

corrosion research It is a logical and necessary complement to the recently published book Assessment of Corrosion

Education which emphasized that technical education must be supported by academic industrial and government research

Although the present report focuses on the government role this emphasis does not diminish the role of industry or academia
