Protein-protein Recognition Colin Kleanthous, 2000 The purpose of Protein Protein Recognition is to bring together concepts and systems pertaining to protein protein interactions in a single unifying volume In the light of the information from the genome sequencing projects and the increase in structural information it is an opportune time to try to make generalizations about how and why proteins form complexes with each other The emphasis of the book is on heteromeric complexes complexes in which each of the components can exist in an unbound state and will use well studied model systems to explain the processes of forming complexes After an introductory section on the kinetics thermodynamics analysis and classification of protein protein interactions weak intermediate and high affinity complexes are dealt with in turn Weak affinity complexes are represented by electron transfer proteins and integrin complexes Anti lysozyme antibodies

the MHC proteins and their interactions with T cell receptors and the protein interactions of eukaryotic signal transduction are the systems used to explain complexes with intermediate affinities Finally tight binding complexes are represented by the interaction of protein inhibitors with serine proteases and by nuclease inhibitor complexes Throughout the chapters common themes are the technologies which have had the greatest impact how specificity is determined how complexes are stabilized and medical and industrial applications

Protein Structure Eshel Faraggi, 2012-04-20 Since the dawn of recorded history and probably even before men and women have been grasping at the mechanisms by which they themselves exist Only relatively recently did this grasp yield anything of substance and only within the last several decades did the proteins play a pivotal role in this existence In this expose on the topic of protein structure some of the current issues in this scientific field are discussed The aim is that a non expert can gain some appreciation for the intricacies involved and in the current state of affairs The expert meanwhile we hope can gain a deeper understanding of the topic

Progress in Inorganic Chemistry, Volume 32 Stephen J. Lippard, 2009-09-17 This comprehensive series of volumes on inorganic chemistry provides inorganic chemists with a forum for critical authoritative evaluations of advances in every area of the discipline Every volume reports recent progress with a significant up to date selection of papers by internationally recognized researchers complemented by detailed discussions and complete documentation Each volume features a complete subject index and the series includes a cumulative index as well

Catalysts for Nitrogen Fixation Barry E. Smith, Raymond L. Richards, William E. Newton, 2013-03-20 Biological nitrogen fixation provides more than 50% of the total annual input of the essential element nitrogen to world agriculture Thus it is of immense agronomic importance and critical to food supplies particularly in developing countries This book with chapters authored by internationally renowned experts provides a comprehensive and detailed account of the fascinating history of the process including the surprising discoveries of molybdenum independent nitrogenases and superoxide dependent nitrogenase a review of Man's attempts to emulate the biological process most successfully with the commercially dominant Haber Bosch process and the current state of the understanding art with respect to the enzymes called nitrogenases responsible for biological nitrogen fixation The initial chapters use a historical approach to the biological and industrial processes followed by an overview of assay methodologies The next set of chapters focuses on the classical enzyme the molybdenum nitrogenase and details its biosynthesis structure composition and mechanism of action as well as detailing both how variants of its two component proteins are constructed by recombinant DNA technology and how computational techniques are being applied The sophisticated chemical modelling of the metal containing clusters in the enzyme is reviewed next followed by a description of the two molybdenum independent nitrogenases first the vanadium containing enzyme and then the iron only nitrogenase together with some thoughts as to why they exist Then follows an up to date treatment of the clearly non classical properties of the superoxide dependent nitrogenase which more closely resembles molybdenum containing hydroxylases and related enzymes like nitrate reductase

that it does the other nitrogenases Each chapter contains an extensive list of references This book is the self contained first volume of a comprehensive seven volume series No other available work provides the up to date and in depth coverage of this series and this volume This book is intended to serve as an indispensable reference work for all scientists working in this area including agriculture and the closely related metals in biology area to assist students to enter this challenging area of research and to provide science administrators easy access to vital relevant information **Iron-Sulfur Proteins**
