Protein Based Materials:

Protein-Based Materials David Kaplan, Kevin McGrath, 1997-12-01 Nature learned long ago how useful proteins are as a diverse set of building blocks to make materials with very diverse properties Spider webs egg whites hair follicles and skeletal muscles are all largely protein This book provides a glimpse into both nature's strategies for the design and production of protein based materials and how scientists have been able to go beyond the constraints of natural materials to produce synthetic analogs with potentially wider ranges of properties The work presented is very much the beginning of the story Only recently has there been much progress in obtaining a molecular understanding of some of nature's complex materials and the mimicry or replacement of these by synthetic or genetically engineered variants is a field still in its infancy Yet this book will serve as a useful introduction for those wishing to get started in what is sure to be an active and productive field throughout the 21st century The authors represent a wide range of interests and expertise and the topics chosen are comprehensive Charles R Cantor Center for Advanced Biotechnology Boston University Series Preface The properties of materials depend on the nature of the macromolecules small molecules and inorganic components and the interfaces and interactions between them Polymer chemistry and physics and inorganic phase structure and density are major factors that influence the performance of materials *Protein engineering and other bio-synthetic routes for bio-based materials: Current uses and potential applications* Carissa M Soto, 2015-01-22 In the past 20 years protein engineering has been used for the production of proteins mostly for biological applications The incorporation of artificial amino acids and chemical handles into proteins had made possible the design and production of protein based materials like hybrid inorganic organic materials smart responsive materials monodisperse polymers and nanoscale assemblies In the current topic we cover current uses and envision future applications of materials generated using protein engineering and biosynthesis techniques I would like to acknowledge the U S Office of Naval Research for financial support and Dr Cherise Bernard for her contributions during the early stages of the Research Topic *Protein Engineering Handbook* Stefan Lutz, Uwe Theo
