Analyzing Network Data in Biology and Medicine Nataša Pržulj, 2019-03-28 The increased and widespread availability of large network data resources in recent years has resulted in a growing need for effective methods for their analysis The challenge is to detect patterns that provide a better understanding of the data However this is not a straightforward task because of the size of the data sets and the computer power required for the analysis The solution is to devise methods for approximately answering the questions posed and these methods will vary depending on the data sets under scrutiny This cutting edge text introduces biological concepts and biotechnologies producing the data graph and network theory cluster analysis and machine learning before discussing the thought processes and creativity involved in the analysis of large scale biological and medical data sets using a wide range of real life examples Bringing together leading experts this text provides an ideal introduction to and insight into the interdisciplinary field of network data analysis in biomedicine

Protein Moonlighting in Biology and Medicine Brian Henderson, Mario

A. Fares, Andrew C. R. Martin, 2016-12-12 The past 25 years has seen the emergence of a wealth of data suggesting that novel biological functions of known proteins play important roles in biology and medicine This ability of proteins to exhibit more than one unique biological activity is known as protein moonlighting Moonlighting proteins can exhibit novel biological functions thus extending the function of the proteome and are also implicated in the pathology of a growing number of idiopathic and infectious diseases This book written by a cell biologist protein evolutionary biologist and protein bioinformatician brings together the latest information on the structure evolution and biological function of the growing numbers of moonlighting proteins that have been identified and their roles in human health and disease This information is revealing the enormous importance protein moonlighting plays in the maintenance of human health and in the induction of disease pathology Protein Moonlighting in Biology and Medicine will be of interest to a general readership in the biological and biomedical research community Advances in Protein Chemistry and Structural Biology, 2014-03-11 This eclectic volume features two major topics applications of mass spectrometry in bioscience and computational methods for analysis of protein structure and interactions with other macromolecules Published continuously since 1944 the Advances in Protein Chemistry and Structural Biology series has been the essential resource for protein chemists Each volume brings forth new information about protocols and analysis of proteins Each thematically organized volume is guest edited by leading experts in a broad range of protein related topics Describes advances in application of powerful techniques in a wide bioscience area Chapters are written by authorities in their field Targeted to a wide audience of researchers specialists and students The information provided in the volume is well supported by a number of high quality illustrations figures and tables Protein Carbonylation Joaquim Ros, 2017-05-05 Protein carbonylation has attracted the interest of a great number of laboratories since the pioneering studies at the Earl Stadtman s lab at NIH started in early 1980s Since then detecting protein carbonyls in oxidative stress situations became a highly efficient tool to uncover biomarkers of oxidative damage in normal and altered cell physiology In this book research groups from several areas of interest have contributed to update the knowledge regarding detection analyses and identification of carbonylated proteins and the sites where these modifications occur The scientific community will benefit from these reviews since they deal with specific detailed technical approaches to study formation and detection of protein carbonyls Moreover the biological impact of such modifications in metabolic physiologic and structural functions and how these alterations can help understanding the downstream effects on cell function are discussed Oxidative stress occurs in all living organisms and affects proteins and other macromolecules Protein carbonylation is a measure of oxidative stress in biological systems Mass spectrometry fluorescent labelling antibody based detection biotinylated protein selection and other methods for detecting protein carbonyls and modification sites in proteins are described Aging neurodegenerative diseases obstructive pulmonary diseases malaria cigarette smoke adipose tissue and its relationship with protein carbonylation Direct oxidation glycoxidation and modifications by lipid peroxidation products as

Self-Assembling Peptide Systems in Biology, Medicine and Engineering A. Aggeli, N. Boden, Zhang Shuguang, 2007-05-08 One of the major drivers in biological research is the establishment of structures and functions of the 50 000 or so proteins in our bodies Each has a characteristic dimensional structure highly ordered yet disordered This structure is essential for a protein's function and significantly it must be sustained in the competitive and complex environment of the living cell It is now being recognised that when a cell loses control proteins can self assemble into more complex supermolecular structures such as the amyloid fibres and plaques associated with the pathogenesis of prion CJD or age related Alzheimer's diseases This is a pointer to the wider significance of the self assembling properties of polypeptides It has been long known that in silk polypeptides are assembled into sheet structures which impart on the material its highly exploitable properties of flexibility combined with high tensile strength But only now emerging is the recognition that peptides can self assemble into a wide variety of non protein like structures including fibrils fibres tubules sheets and monolayers These are exciting observations and more so the potential for materials and medical exploitations is so wide ranging that over 80 scientists from Europe USA Japan and Israel met 1 6 July 1999 in Crete to discuss the wide ranging implications of these novel developments There was a spirit of excitement about the workshop indicative of an important new endeavor The emerging perception is that of a new class of materials set to become commercially viable early in the 21st century
