R.A. Bradshaw,M. Purton,2012-12-02 Proteins are of fundamental importance in all aspects of cell structure and function The study of proteins has always formed a central part of biochemistry and recent expansion in the range and sophistication of available techniques has provided a wealth of new information The current methods and approaches used to gain a better understanding of the structure of proteins are described within this book while other articles focus on the role of proteins within the cell Most of the articles have appeared previously in the monthly review journal Trends in Biochemical Sciences TIBS with a few commissioned specifically for this collection which should appeal to students lecturers and researchers interested in the form and function of proteins **Genetics** Benjamin Pierce,2004-12-24 Based on the author s more than twenty years of teaching experience Genetics A Conceptual Approach offers a fresh new way of introducing the major concepts and mechanics of genetics focusing students on the big picture without overwhelming them with detail

Essential Cell Biology Bruce Alberts,Dennis Bray,Karen Hopkin,Alexander D Johnson,Julian Lewis,Martin Raff,Keith Roberts,Peter Walter,2015-01-01 Essential Cell Biology provides a readily accessible introduction to the central concepts of cell biology and its lively clear writing and exceptional illustrations make it the ideal textbook for a first course in both cell and molecular biology The text and figures are easy to follow accurate clear and engaging for the introductory student Molecular detail has been kept to a minimum in order to provide the reader with a cohesive conceptual framework for the basic science that underlies our current understanding of all of biology including the biomedical sciences The Fourth Edition has been thoroughly revised and covers the latest developments in this fast moving field yet retains the academic level and length of the previous edition The book is accompanied by a rich package of online student and instructor resources including over 130 narrated movies an expanded and updated Question Bank Essential Cell Biology Fourth Edition is additionally supported by the Garland Science Learning System This homework platform is designed to evaluate and improve student performance and allows instructors to select assignments on specific topics and review the performance of the entire class as well as individual students via the instructor dashboard Students receive immediate feedback on their mastery of the

DNA-Protein Interactions A. Travers, 2012-12-06 Our understanding of the mechanisms regulating gene expression which determine the patterns of growth and development in all living organisms ultimately involves the elucidation of the detailed and dynamic interactions of proteins with nucleic acids both DNA and RNA Until recently the commonly presented view of the DNA double helix as visualized on the covers of many textbooks and journals was as a monotonous static straight rod incapable in its own right of directing the processes necessary for the conservation and selective reading of genetic information This view although perhaps extreme was reinforced by the necessary linearity of genetic maps The reality is that the biological functions of both DNA and RNA are dependent on complex and sometimes transient three dimensional nucleoprotein structures in which genetically distant elements are brought into close spatial proximity It is in such structures that the enzymatic manipulation of DNA in the essential biological processes as DNA replication transcription and recombination are effected the complexes are the mediators of the DNA transactions of Hatch Echols
