Novel Plant Protein Processing Zakir Showkat Khan, Sajad Ahmad Wani, Shemilah Fayaz, 2023-12-29. Proteins serve as an important nutritional as well as structural component of foods. Not only do they provide an array of amino acids necessary for maintaining human health but also act as thickening, stabilizing, emulsifying, foaming, gelling and binding agents. The ability of a protein to possess and demonstrate such unique functional properties depends largely on its inherent structure, configuration and how they interact with other food constituents like polysaccharides, lipids and polyphenolic compounds. Proteins from animal sources have superior functionality, higher digestibility and lower anti-nutrient components than plant proteins. However, consumer preferences are evolving worldwide for ethically and sustainably sourced, clean, cruelty-free, vegan or vegetarian plant-based food products. Unlike proteins from animal sources, plant proteins are more versatile, religiously and culturally acceptable among vegetarian and vegan consumers and associated with lower food processing waste, water and soil requirements. Thus, the processing and utilization of plant proteins have gained worldwide attention and as such numerous scientific studies are focusing on enhancing the utilization of plant proteins in food and pharmaceutical products through various processing and modification techniques to improve their techno-functional properties, bioactivity, bioavailability and digestibility.
