*Psychiatry and Biological Factors* Edouard Kurstak, 2012-12-06 The main purpose of the volume *Psychiatry and Biological Factors* is to provide a comprehensive state of the art overview of the current research linked essentially to virus infections immunity functions and mental diseases In recent years substantial advances have been registered in the physiopathology of mental and neurological disorders As a result partial control of certain psychoses anxiety syndromes epilepsy and Parkinson's disease is now possible However despite progress in biomedical research numerous mental and neurological disorders afflict up to 15% of all individuals and little is known about the causes prevention and treatment of these diseases Several epidemiological investigations demonstrated a high prevalence of functional psychoses and organic mental disorders and recent data show that biological components appear as a major etiologic factor In this respect it could be stressed that viral and immunologic hypotheses should be investigated seriously and systematically in relation to the mechanisms of several mental and neurological diseases Neuropsychiatric consequences of AIDS related to human immunodeficiency virus infection are now well documented A variety of behavioral symptoms and psychiatric syndromes with paranoid features are frequent concomitants of AIDS

Philosophical Issues in Psychiatry IV Kenneth S. Kendler, Josef Parnas, 2017-04-06 The revisions of both DSM IV and ICD 10 have again focused the interest of the field of psychiatry and clinical psychology on the issue of nosology This interest has been further heightened by a series of controversies associated with the development of DSM 5 including the fate of proposed revisions of the personality disorders bereavement and the autism spectrum Major debate arose within the DSM process about the criteria for changing criteria leading to the creation of first the Scientific Review Committee and then a series of other oversight committees which weighed in on the final debates on the most controversial proposed additions to DSM 5 providing important influences on the final decisions Contained within these debates were a range of conceptual and philosophical issues Some of these such as the definition of mental disorder or the problems of psychiatric epidemics have been with the field for a long time Others the concept of epistemic iteration as a framework for the introduction of nosologic change are quite new This book reviews issues within psychiatric nosology from clinical historical and particularly philosophical perspectives The book brings together a range of distinguished authors including major psychiatric researchers clinicians historians and especially nosologists including several leaders of the DSM 5 effort and the DSM Steering Committee It also includes contributions from psychologists with a special interest in psychiatric nosology and philosophers with a wide range of orientations The book is organized into four major sections The first explores the nature of psychiatric illness and the way in which it is defined including clinical and psychometric perspectives The second section examines problems in the reification of psychiatric diagnostic criteria the problem of psychiatric epidemics and the nature and definition of individual symptoms The third section explores the concept of epistemic iteration as a possible governing conceptual framework for the revision efforts for official psychiatric nosologies such as DSM and ICD and the problems of validation of psychiatric diagnoses The book ends by exploring how we might move from the descriptive to the etiologic in psychiatric diagnoses the nature of progress in psychiatric research and the possible benefits of moving to a living document or continuous improvement model for psychiatric nosologic systems The result is a book that captures the dynamic cross disciplinary interactions that characterize the best work in the philosophy of

psychiatry     *Psychiatry Reborn: Biopsychosocial psychiatry in modern medicine* Will Davies, Julian Savulescu, Rebecca Roache, J. Pierre Loebel, 2020-10-21 Psychiatry Reborn Biopsychosocial Psychiatry in Modern Medicine is a comprehensive collection of essays by leading experts in the field and provides a timely reassessment of the biopsychosocial approach in psychiatry. Spanning the sciences and philosophy of psychiatry, the essays offer complementary perspectives on the ever more urgent importance of the biopsychosocial approach to modern medicine. The collection brings together ideas from the series of Loebel Lectures by world leaders in the field of psychiatry and associated Workshops at the University of Oxford, including revised versions of the Lectures themselves and a wide range of related commentaries and position pieces. With contributions from psychiatry, psychology, neuroscience, and philosophy, the book provides the most comprehensive account to date of the interplay between biological, psychological, and social factors in mental health and their ethical dimensions. The 23 chapters of this multi-authored book review the history and place of the biopsychosocial model in medicine and explore its strengths and shortcomings. In particular, it considers how understanding this interplay might lead to more effective treatments for mental health disorders as developments in genomic and neurobiological medicine challenge traditional conceptions and approaches to the research and treatment of mental health disorders. The book explores the challenges and rewards of developing diagnostic tools and clinical interventions that take account of the inextricably intertwined bio-psycho-social domains and the ethical implications of the conceptualization. It concludes with chapters drawing together the book's range of expertise to propose a best conception of the model and how it might be adopted going forward in an age of exponentially increasing technological advances and of integrated collaborative care. The volume is intended to present the BPS model as it stands today in the academy, the lab, and the clinic and to start to address the challenges and potential that the model has for each.
