

The background of the slide is a photograph of an open book, likely a Bible, with its pages slightly aged and yellowed. The book is open to a section with text, but the details are soft and out of focus. A dark, semi-transparent rectangular box is overlaid on the upper half of the image, providing a space for the title and subtitle. The title 'PSYCHIATRY AND RELIGION' is written in a large, white, serif font, centered within the box. Below it, a thin white horizontal line separates the title from the subtitle 'Institute on Religion and Psychiatry', which is written in a smaller, white, serif font.

Towards Cultural Psychology of Religion Jacob A. v. van Belzen, 2010-08-03 The aims pursued in this book are quite modest The text is not an introduction in the traditional sense to any psychological subdiscipline or field of application nor does it present anything essentially new Rather it shows work in progress as it attempts to contribute to an integration of two differently structured but already existing fields within psychology In order to explain this it is probably best to say a few words about how the book came into being and about what it hopes to achieve As a project the volume owes very much to others While lecturing in places ranging from South Africa to Canada and from California through Europe to Korea colleagues have often urged me to come up with a volume on cultural psychology of religion For reasons that should become clear in the text I feel uncomfortable with such a demand To my understanding there exists no single cultural psychology of religion Rather there are ever expanding numbers of different types of psychologies some of which are applied to understanding religious aspects of human lives or to researching specific religious phenomena while others are not Within this heterogeneous field that is correctly or not still designated as psychology there are also many approaches that are sometimes referred to as cultural psychology or as culturally sensitive psychologies It would be wonderful while applying many of these to research on religious phenomena but at present not too many are in fact so applied

Explorations in Neuroscience, Psychology and Religion Kevin S. Seybold, 2016-04-15 In the 1990s great strides were taken in clarifying how the brain is involved in behaviors that in the past had seldom been studied by neuroscientists or psychologists This book explores the progress begun during that momentous decade in understanding why we behave think and feel the way we do especially in those areas that interface with religion What is happening in the brain when we have a religious experience Is the soul a product of the mind which is in turn a product of the brain If so what are the implications for the Christian belief in an afterlife If God created humans for the purpose of having a relationship with him should we expect to find that our spirituality is a

biologically evolved human trait What effect might a disease such as Alzheimer's have on a person's spirituality and relationship with God Neuroscience and psychology are providing information relevant to each of these questions and many Christians are worried that their religious beliefs are being threatened by this research Kevin Seybold attempts to put their concerns to rest by presenting some of the scientific findings coming from these disciplines in a way that is understandable yet non-threatening to Christian belief
