Critical Skills for Environmental Professionals Jennifer Pontius, Alan McIntosh, 2019-12-20 This textbook focuses on a set of skills based learning outcomes common among undergraduate environmental programs It covers critical scientific skills and ways of thinking that bridge the gap between the knowledge based content of introductory environmental textbooks and the professional skills students of the environment need to succeed in both their academic programs and professional careers

This emphasis on skills is gaining more traction among academic programs across the country as they shift focus from knowledge delivery to learning outcomes and professional competencies. The book features clear methodological frameworks, engaging practice exercises, and a range of assessment case studies suitable for use across academic levels. For introductory levels, this text uses guided practice exercises to expose students to the skills they will need to master. At the capstone level, this text allows students to apply the knowledge they have gained to real world issues and to evaluate their competency in key programmatic learning outcomes. A detailed answer key with rubrics customized for specific questions and sample answers at various competency levels is available to verified course instructors. Access to these answer key resources can be obtained by contacting the Springer Textbook Team at Textbooks@springer.com.

Engineering in Pre-college Settings

Senay Purzer, Johannes Strobel, Monica E. Cardella, 2014. In science, technology, engineering, and mathematics (STEM) education, pre-college engineering is not the silent one anymore. There is an accelerated interest in teaching engineering in all grade levels. Structured engineering programs are emerging in schools as well as in out-of-school settings. Over the last ten years, the number of states in the US including engineering in their K-12 standards has tripled, and this trend will continue to grow with the adoption of the Next Generation Science Standards. The interest in pre-college engineering education stems from three different motivations. First, from a workforce pipeline or pathway perspective, researchers and practitioners are interested in understanding precursors, influential and motivational factors, and the progression of engineering thinking. Second, from a general societal perspective, technological literacy and understanding of the role of engineering and technology is becoming increasingly important for the general populace, and it is more imperative to foster this understanding from a younger age. Third, from a STEM integration and education perspective, engineering processes are used as a context to teach science and math concepts. This book addresses each of these motivations and the diverse means used to engage with them. Designed to be a source of background and inspiration for researchers and practitioners alike, this volume includes contributions on policy synthesis, studies, and research studies to catalyze and inform current efforts to improve pre-college engineering education. The book explores teacher learning and practices as well as how student learning occurs in both formal settings such as classrooms and informal settings such as homes and museums. This volume also includes chapters on assessing design and creativity.

Alternative Schools in British Columbia 1960-1975

Harley Rothstein, 2024-07-18. The tumultuous 1960s was an era of the counterculture, political activism, and resistance to authority. Conventions and values were challenged, and new approaches to education captured the imaginations of parents, teachers, and students. Reacting against the one-size-fits-all nature of the traditional public school system, groups of parents and teachers in Canada and the United States established alternative schools or free schools based on the Progressive child-centred philosophy of John Dewey and the Romantic ideas of Summerhill founder A.S. Neill. In *Alternative Schools in British Columbia 1960-1975*, Harley Rothstein tells the story of ten such schools that arose in the province of British Columbia.

Drawing on 350 self conducted interviews newspaper articles personal journals and school records Dr Rothstein invites readers to experience the early days of alternative schools He describes the educational philosophy curriculum and governance of these institutions and introduces readers to the people who were at the heart of alternative communities Tracing the evolution successes and challenges of each school he presents the day to day experience and brings to life the ethos of the 1960s era Historians educators and all curious readers will become immersed in this engaging account of a group of educational pioneers on Canada s west coast and how they inspired the liberalization of the public school system that would come in the 1970s
