Realism And Anti Realism In The Philosophy Of Science Beijing International Conference 199:

Global Epistemologies and Philosophies of Science David Ludwig, Inkeri Koskinen, Zinhle Mncube, Luana Poliseli, Luis Reyes-Galindo, 2021-07-29 In bringing together a global community of philosophers Global Epistemologies and Philosophies of Science develops novel perspectives on epistemology and philosophy of science by demonstrating how frameworks from academic philosophy e.g. standpoint theory, social epistemology, feminist philosophy of science and related fields e.g. decolonial studies, transdisciplinarity, global history of science can contribute to critical engagement with global dimensions of knowledge and science. Global challenges such as climate change, food production and infectious diseases raise complex questions about scientific knowledge production and its interactions with local knowledge systems and social realities. As academic philosophy provides relatively little reflection on global negotiations of knowledge, many pressing scientific and societal issues remain disconnected from core debates in epistemology and philosophy of science. This book is an invitation to broaden agendas of academic philosophy by presenting epistemology and philosophy of science as globally engaged fields that address heterogeneous forms of knowledge production and their interactions with local livelihoods, practices and worldviews. This integrative ambition makes the book equally relevant for philosophers and interdisciplinary scholars who are concerned with methodological and political challenges at the intersection of science and society. *The Vienna Circle and Religion* Esther Ramharter, 2022-03-08 This book is the first systematic and historical account of the Vienna Circle that deals with the relation of logical empiricists with religion as well as theology. Given the standard image of the Vienna Circle as a strong anti-metaphysical group and non-religious philosophical and intellectual movement, this book draws a surprising conclusion: namely that several members of the famous Moritz Schlick Circle e.g. the left wing with Rudolf Carnap, Otto Neurath, Philipp Frank, Edgar Zilsel, but also Schlick himself, dealt with the dualisms of faith, belief and knowledge, religion and science, despite or because of their non-cognitivist commitment to the values of Enlightenment. One remarkable exception was the philosopher and Rabbi Joseph Schachter who wrote explicitly on religion and philosophy after the linguistic turn. The book also covers another puzzling figure, the famous logician Kurt Gödel, who wrote on theology and the ontological proof of God in his so far unpublished notebooks. The book opens up new perspectives on the Vienna Circle with its internal philosophical and political pluralism and is of value to philosophers, historians and anybody who is interested in the relation between science and religion. **Subject Guide to Books in Print**, 1991 [Brinkman's cumulatieve catalogus van boeken](#), 1997 Voorts een alfabetische lijst van Nederlandsche boeken in België uitgegeven. *Varieties of Scientific Realism* Evandro Agazzi, 2017-03-08 This book offers a comprehensive update on the scientific realism debate, enabling readers to gain a novel appreciation of the role of objectivity and truth in science and to understand fully the various ways in which anti-realist conceptions have been subjected to challenge over recent decades. Authoritative representatives of different philosophical traditions explain their perspectives on the meaning and validity of scientific realism and describe the

strategies being adopted to counter persisting antirealist positions The coverage extends beyond the usual discussion of realism within the context of the natural sciences and especially physics to encompass also its applicability in mathematics logic and the human sciences The book will appeal to all with an interest in the recent realist epistemologies of science the nature of current philosophical debate and the ongoing rehabilitation of truth as the legitimate goal of scientific research

Critical Scientific Realism Ilkka Niiniluoto, 1999-12-09 Ilkka Niiniluoto comes to the rescue of scientific realism showing that reports of its death have been greatly exaggerated Philosophical realism holds that the aim of a particular discourse is to make true statements about its subject matter Niiniluoto surveys the different varieties of realism in ontology semantics epistemology theory construction and methodology He then sets out his own original version and defends it against competing theories in the philosophy of science Niiniluoto's critical scientific realism is founded upon the notion of truth as correspondence between language and reality and characterizes scientific progress in terms of increasing truthlikeness This makes it possible not only to take seriously but also to make precise the troublesome idea that scientific theories typically are false but nevertheless close to the truth

The Problem of Realism Michele Marsonet, 2018-01-18 This title was first published in 2003 This book explores the problem of realism both metaphysical and scientific Renowned specialists in the field including Michael Devitt David Papineau Mark Sainsbury and Wesley Salmon contribute new essays that shed new light on the main topics in the current realism antirealism debate Discussing a wide range of issues related to realism both in metaphysics and in the philosophy of science they address more specific questions including those concerning metaphysical realism scientific realism the relations between epistemology and ontology causation dispositions and personal identity and the relations between science and common sense Presenting a comprehensive overview of the problem of realism as well as in depth discussion of particular topics this book offers valuable insights for both students and researchers in the field It can also be used in undergraduate and graduate courses of philosophy

Embracing Scientific Realism Seungbae Park, 2021-12-04 This book provides philosophers of science with new theoretical resources for making their own contributions to the scientific realism debate Readers will encounter old and new arguments for and against scientific realism They will also be given useful tips for how to provide influential formulations of scientific realism and antirealism Finally they will see how scientific realism relates to scientific progress scientific understanding mathematical realism and scientific practice

Realism in the Sciences Igor Douven, Leon Horsten, 1996 This book contains ten papers that were presented at the symposium about the realism debate held at the Center for Logic Philosophy of Science and Philosophy of Language of the Institute of Philosophy at the Katholieke Universiteit Leuven on 10 and 11 March 1995 The first group of papers are directly concerned with the realism anti realism debate in the general philosophy of science This group includes the articles by Ernan McMullin Diderik Batens Joke Meheus Igor Douven and Herman de Regt The papers of the second group concentrate on specific problems arising from the realism anti realism debate Theo Kuipers contribution discusses the

problem of truth approximation Roger Vergauwen's article pertains to the issue of realism in the philosophy of mind and semantics Jaap van Brakel's article focusses on the relation between everyday concepts and scientific concepts and on the theory dependence of observation Paul Cortois investigates the relation between the question of realism and Kuhn's concept of incommensurability between scientific theories The final group contains two papers on the realism anti realism debate in the special sciences James Cushing discusses the problem of underdetermination in quantum mechanics and Jean Paul van Bendegem addresses the question of the possibility of an empiricist philosophy of mathematics

Realism and Anti-Realism Stuart Brock, Edwin Mares, 2007-01-01 Stuart Brock and Edwin Mares offer a clear introduction to different realist and anti realist positions and arguments in five key domains science ethics mathematics modality and fictional objects Realism and Anti Realism focuses on the core concept of realism taking the perspective that for each domain considered there are facts or entities distinctive to that domain whose existence and nature is in some important sense objective and mind independent For each of the five areas the authors examine the various styles of argument in support of and against realism and anti realism showing how different positions and arguments arise evaluating their success and drawing some general conclusions about the assorted strategies They provide in depth explorations of error theory fictionalism non cognitivism relativism and response dependence which they consider to be the most important positions in opposition to realism

The Explanationist Defense of Scientific Realism Dorit A. Ganson, 2001 First Published in 2001 Routledge is an imprint of Taylor Francis an informa company **Realism and Truth** Michael Devitt, 1997-01-12 In a provocative thesis philosophy professor Michael Devitt argues for a thoroughgoing realism about the common sense and scientific physical world and for a corresponding notion of truth contrary to the opinions of anti realists such as Putnam Dummett van Fraassen and others This second edition includes a new Afterword by the author

Truth Matters Christopher Norris, 2019-08-06 Truth Matters is the first full length introduction to the philosophical issue of response dependence

Realism and Antirealism William P. Alston, 2018-08-06 Throughout the past century a debate has raged over the thesis of realism and its alternatives Realism the seemingly commonsensical view that all or most of what we encounter in the world exists and is what it is independently of human thought has been vigorously denied by such prominent intellectuals as Jacques Derrida Michel Foucault Richard Rorty Thomas Kuhn Hilary Putnam and Nelson Goodman The opponents of realism among them historians and social scientists who support social constructionism hold that all or most of reality depends on human conceptual schemes and beliefs In this volume of original essays a group of philosophers explores the ongoing controversy The book opens with an introduction by William P Alston whose writing on the subject has been widely influential Selected essays then compare and contrast aspects of the arguments put forward by the realists with those of the antirealists Other chapters discuss the importance of the debate for philosophical topics such as epistemology and for domains ranging from religion literature and science to morality

Studies in Scientific Realism Andre Kukla, 1998-04-30 This book offers a

superbly clear analysis of the standard arguments for and against scientific realism In surveying claims on both sides of the debate Kukla organizes them in ways that expose unnoticed connections He identifies broad patterns of error reconciles seemingly incompatible positions and discovers unoccupied positions with the potential to influence further debate Kukla's overall assessment is that neither the realists nor the antirealists may claim a decisive victory Metaphysical Realism and Anti-Realism J. T. M. Miller, 2022-07-07 Minimally metaphysical realists hold that there exist some mind independent entities Metaphysical realists also tend to hold that we can speak meaningfully or truthfully about mind independent entities Those who reject metaphysical realism deny one or more of these commitments This Element aims to introduce the reader to the core commitments of metaphysical realism and to illustrate how these commitments have changed over time by surveying some of the main families of views that realism has been contrasted with such as radical scepticism idealism and anti realism

Realism and Representation George Levine, 1993 The essays gathered here except for the Introduction were originally written for the conference on Realism and Representation which took place from 10 to 12 November 1989 at Rutgers University The volume is organized to move from direct confrontation with epistemological issues framed in the discourse of science to in the middle sections a series of attempts to think about the relations of literature and science side by side with particular reference to questions of interpretation epistemological authority realism and representation **Scientific Realism** Jarrett Leplin, 1984-01-01 **Reality Lost and Found** Søren Harnow Klausen, 2004 Is there a world out there independent of the way we experience it think of it or talk about it If so can we know how it is These questions have been a central concern of philosophy throughout most of its history and they continue to be the subject of an intense debate between realists and antirealists In this clearly written and comprehensive book Søren Harnow Klausen presents an argument for realism about the external world but also attempts to take the antirealist challenge seriously a sensible realist must acknowledge the force of the skeptical objections and avoid overstating her own case The book covers a wide range of themes from the historical origins of antirealism and the views of Berkeley Kant Husserl and the logical positivists to the most recent developments in epistemology and relevant empirical research in psychology anthropology and linguistics Topics also include the definition of realism and its relationship to semantics and theories of truth the prospect of providing a transcendental argument for realism inference to the best explanation externalist theories of justification the basis of our understanding of mind independent reality the relevance of evolutionary biology to the realism issue and theories of intentionality and perception **Realism, Anti-realism and Naturalized Epistemology in a Model-based Philosophy of Science** Jeramy Sheldon Gee, 2001
