Realtime Strategic Management Simulation:

Real-time Simulation for Sustainable Production Juhani Ukko, Minna Saunila, Janne Heikkinen, R. Scott Semken, Aki Mikkola, 2021-05-30 This book provides a comprehensive overview of potential opportunities and the business value position related to implementing physics based real time simulation to production The objective of real time simulation is to provide value for all three dimensions of sustainability economic social and environmental By reviewing actual industrial cases and presenting relevant academic research the book examines the topic from four interrelated viewpoints the industrial need for sustainable production the development of game like virtual environments capturing customer value and enhancing the user experience and finally establishing business value It offers a framework that will enable a rethink and shift in mindset to appreciate how real time simulation can change the way products are manufactured and services are produced This book will appeal to researchers and scholars in areas as diverse as strategic management manufacturing and operations management marketing industrial economics and product lifecycle management *Real Time Strategy* Andreas Schühly, Frank Becker, Florian Klein, 2020-04-29 Combining classical scenario thinking the gentle art of perception with the analytical power of big data and artificial intelligence Real Time Strategy presents the decision making of the future which enables decision makers to develop dynamic strategies monitor their validity and react faster *Advancements in Real-Time Simulation of Power and Energy Systems* Panos Kotsampopoulos, Md Omar Faruque, 2021-05-20 Modern power and energy systems are characterized by the wide integration of distributed generation storage and electric vehicles adoption of ICT solutions and interconnection of different energy carriers and consumer engagement posing new challenges and creating new opportunities Advanced testing and validation methods are needed to efficiently validate power equipment and controls in the contemporary complex environment and support the transition to a cleaner and sustainable energy system Real time hardware in the loop HIL simulation has proven to be an effective method for validating and de risking power system equipment in highly realistic flexible and repeatable conditions Controller hardware in the loop CHIL and power hardware in the loop PHIL are the two main HIL simulation methods used in industry and academia that contribute to system level testing enhancement by exploiting the flexibility of digital simulations in testing actual controllers and power equipment This book addresses recent advances in real time HIL simulation in several domains also in new and promising areas including technique improvements to promote its wider use It is composed of 14 papers dealing with advances in HIL testing of power electronic converters power system protection modeling for real time digital simulation co simulation geographically distributed HIL and multiphysics HIL among other topics *Fundamentals of Traffic Simulation* Jaume Barceló, 2011-01-06 The increasing power of computer technologies the evolution of software engineering and the advent of the intelligent transport systems has prompted traffic simulation to become one of the most used approaches for traffic analysis in support of the design and evaluation of traffic systems The ability of traffic simulation to emulate the time variability of traffic phenomena

makes it a unique tool for capturing the complexity of traffic systems. In recent years, traffic simulation and, namely, microscopic traffic simulation has moved from the academic to the professional world. A wide variety of traffic simulation software is currently available on the market and it is utilized by thousands of users, consultants, researchers, and public agencies. Microscopic traffic simulation based on the emulation of traffic flows from the dynamics of individual vehicles is becoming one of the most attractive approaches. However, traffic simulation still lacks a unified treatment. Dozens of papers on theory and applications are published in scientific journals every year. A search of simulation-related papers and workshops through the proceedings of the last annual TRB meetings would support this assertion as would a review of the minutes from specially dedicated meetings such as the International Symposiums on Traffic Simulation (Yokohama 2002, Lausanne 2006, Brisbane 2008) or the International Workshops on Traffic Modeling and Simulation (Tucson 2001, Barcelona 2003, Sedona 2005, Graz 2008). Yet the only comprehensive treatment of the subject to be found so far is in the user's manuals of various software products.
