*Reasoning Robots* Michael Thielscher, 2005-12-15 The creation of intelligent robots is surely one of the most exciting and challenging goals of Artificial Intelligence. A robot is first of all nothing but an inanimate machine with motors and sensors. In order to bring life to it, the machine needs to be programmed so as to make active use of its hardware components. This turns a machine into an autonomous robot. Since about the mid-nineties of the past century, robot programming has made impressive progress. State-of-the-art robots are able to orient themselves and move around freely in indoor environments or negotiate difficult outdoor terrains; they can use stereo vision to recognize objects and they are capable of simple object manipulation with the help of artificial extremities. At a time where robots perform these tasks more and more reliably, we are ready to pursue the next big step, which is to turn autonomous machines into reasoning robots. A reasoning robot exhibits higher cognitive capabilities like following complex and long-term strategies, making rational decisions on a high level, drawing logical conclusions from sensor information acquired over time, devising suitable plans, and reacting sensibly in unexpected situations. All of these capabilities are characteristics of human-like intelligence and ultimately distinguish truly intelligent robots from mere autonomous machines.

Machine Learning: ECML 2005 João Gama, Rui Camacho, Pavel Brazdil, Alípio Jorge, Luís Torgo, 2005-11-15 The European Conference on Machine Learning ECML and the European Conference on Principles and Practice of Knowledge Discovery in Databases PKDD were jointly organized this year

for the fifth time in a row after some years of mutual independence before. After Freiburg 2001, Helsinki 2002, Cavtat 2003 and Pisa 2004, Porto received the 16th edition of ECML and the 9th PKDD in October 3-7. Having the two conferences together seems to be working well. 585 different paper submissions were received for both events which maintains the high submission standard of last year. Of these 335 were submitted to ECML only, 220 to PKDD only and 30 to both. Such a high volume of scientific work required a tremendous effort from Area Chairs, Program Committee members and some additional reviewers. On average, PC members had 10 papers to evaluate and Area Chairs had 25 papers to decide upon. We managed to have 3 highly qualified independent reviews per paper with very few exceptions and one additional overall input from one of the Area Chairs. After the authors' responses and the online discussions for many of the papers, we arrived at the final selection of 40 regular papers for ECML and 35 for PKDD. Besides these 32 others were accepted as short papers for ECML and 35 for PKDD. This represents a joint acceptance rate of around 13% for regular papers and 25% overall. We thank all involved for all the effort with reviewing and selection of papers. Besides the core technical program, ECML and PKDD had 6 invited speakers, 10 workshops, 8 tutorials and a Knowledge Discovery Challenge.

Frontiers of Combining Systems Silvio Ghilardi, Roberto Sebastiani, 2009-09-07. This volume contains the proceedings of the 7th International Symposium of Frontiers of Combining Systems, FroCoS 2009, held during September 16-18, 2009, in Trento, Italy. Previous FroCoS meetings were organized in Munich 1996, Amsterdam 1998, Nancy 2000, Santa Margherita Ligure 2002, Enna 2005 and Liverpool 2007. In 2004, 2006 and 2008, FroCoS joined IJCAR, the International Joint Conference on Automated Reasoning. Like its predecessors, FroCoS 2009 offered a forum for the presentation and discussion of research activities on the combination, integration, analysis, modularization and interaction of formally defined systems with an emphasis on logic-based ones. These issues are important in many areas of computer science such as logic computation, program development and verification, artificial intelligence, automated reasoning, constraint solving, declarative programming and symbolic computation. There were 35 submissions to FroCoS 2009. Each submission was reviewed by at least three Program Committee members. After a careful evaluation, the committee decided to accept the 19 papers which are published in this volume. The volume also includes four invited contributions by Alessandro Armando (DIST, Genova), Thomas Eiter (TU Wien), Boris Motik (OxCL, Oxford) and Ashish Tiwari (SRI, Stanford).
