Creation and Communication Aldo de Moor, Wilfried Lex, Bernhard Ganter, 2003-09-09 This volume contains the proceedings of ICCS 2003 the 11th International Conference on Conceptual Structures

This conference series continues to be the main forum for the presentation and discussion of state of the art research on conceptual structures The theories, methodologies and techniques presented here have grown considerably in scope in recent years On the other hand, solid bridges spanning the boundaries between such diverse fields as Conceptual Graphs, Formal Concept Analysis and others are increasingly being built in our community The theme of this year's conference was Conceptual Structures for Knowledge Creation and Communication In our increasingly interconnected world the potential support of information technology for the creation and communication of quality knowledge is almost boundless However in reality many

conceptual barriers prevent the use of this potential. The main problem is no longer in the technological infrastructure but in how to navigate use and manage the wealth of available data resources. Thus the question is how to create and communicate from data the information and ultimately the knowledge required by an ever more complex and dynamic society. Conceptual structures research focuses on what is behind and between the data glut and the information overload that need to be overcome in answering this question. In this way our field contributes important ideas on how to actually realize some of the many still ambitious visions. All regular papers were reviewed in a thorough and open process by at least two reviewers and one editor.

AI 2008: Advances in Artificial Intelligence Wayne Wobcke, 2008-11-13 This book constitutes the refereed proceedings of the 21th Australasian Joint Conference on Artificial Intelligence AI 2008 held in Auckland New Zealand in December 2008. The 42 revised full papers and 21 revised short papers presented together with 1 invited lecture were carefully reviewed and selected from 143 submissions. The papers are organized in topical sections on knowledge representation constraints planning grammar and language processing statistical learning machine learning data mining knowledge discovery soft computing vision and image processing and AI applications.

Conceptual Graphs and Fuzzy Logic Tru Hoang Cao, 2010-07-17 In this volume first we formulate a framework of fuzzy types to represent both partial truth and uncertainty about concept and relation types in conceptual graphs. Like fuzzy attribute values fuzzy types also form a lattice laying a common ground for lattice based computation of fuzzy granules. Second for automated reasoning with fuzzy conceptual graphs we develop foundations of order sorted fuzzy set logic programming extending the theory of annotated logic programs of Kifer and Subrahmanian 1992. Third we show some recent applications of fuzzy conceptual graphs to modelling and computing with generally quantified statements approximate knowledge retrieval and natural language query understanding.
