Carpentier, 2012-12-06 Nutritional support of critically ill patients is a major treatment modality which will enhance recovery and shorten convalescence New knowledge has emphasized that much of the organ dysfunction associated with sepsis and altered blood flow is related to oxidative injury Specific nutrients are highly effective in counteracting these effects and their early administration may attenuate cellular damage and multi organ failure Patient outcome may also be enhanced by the route of feeding administration of newer nutrient combinations utilization of evolving methods of monitoring and the use of growth factors This new knowledge has evolved to a new area of metabolic support which is addressed for the first time by a group of international experts The topics presented and general conclusions are of major importance to the practitioners in this field for they show for the first time a departure from the more traditional approaches of nutritional support in patients with life threatening diseases

Chertow, 2008-05-15 The Nutrition and Health™ series of books have as an overriding mission to provide health professionals with texts that are considered essential because each includes 1 a synthesis of the state of the science 2 timely in depth reviews by the leading researchers in their respective fields 3 extensive up to date fully annotated reference lists 4 a detailed index 5 relevant tables and figures 6 identification of paradigm shifts and the consequences 7 virtually no overlap of information between chapters but targeted inter chapter referrals 8 suggestions of areas for future research and 9 balanced data driven answers to patient health professional questions that are based upon the totality of evidence rather than the findings of any single study The series volumes are not the outcome of a symposium Rather each editor has the potential to examine a chosen area with a broad perspective both in subject matter as well as in the choice of chapter authors The international perspective especially with regard to public health initiatives is emphasized where appropriate The editors whose trainings are both research and practice oriented have the opportunity to develop a primary objective for their book define the scope and focus and then invite the leading authorities from around the world to be part of their initiative The authors are encouraged to provide an

Obesity Treatment David B. Allison, F. Xavier Pi-Sunyer, 2012-12-06 Treatment outcome has certainly improved since Stunkard and McLaren Hume 1959 reviewed the literature and found that less than 25% of obese patients lost 20 pounds or more and less than 5% lost 40 pounds or more However one of the few points on which almost all obesity researchers agree is that to date our results are quite modest and we are generally unsuccessful in promoting effective weight maintenance among obese persons As the title of a more recent article Improving long term weight loss Pushing the limits of treatment Brownell Jeffrey 1987 emphasis added suggests many believe that we have pushed our current treatment paradigms to the limit It was with this background in mind that we organized the meeting from which these proceedings issue The purpose of the three day international meeting was to evaluate the current knowledge base and conceptual paradigms of obesity treatment and to suggest directions for future research and clinical practice Rather than simply for research reporting the meeting was primarily for research generation All speakers were established scientists in the field who were asked to summarize our state of knowledge in a given area rather than present the results of their latest research Great efforts were taken to ensure that panel discussions occupied a central portion of the conference and that the questions What else do we need to know and How do we find it out were consistently addressed
