Recent Climatic Change A Regional Approach:

Exploring Climate Change through Science and in Society Mike Hulme, 2013-09-11 Mike Hulme has been studying climate change for over thirty years and is today one of the most distinctive and recognisable voices speaking internationally about climate change in the academy in public and in the media The argument that he has made powerfully over the last few years is that climate change has to be understood as much as an idea situated in different cultural contexts as it is as a physical phenomenon to be studied through universal scientific practices Climate change at its core embraces both science and society both knowledge and culture Hulme's numerous academic and popular writings have explored what this perspective means for the different ways climate change is studied narrated argued over and acted upon Exploring Climate Change through Science and in Society gathers together for the first time a collection of his most popular prominent and controversial articles essays speeches interviews and reviews dating back to the late 1980s The 50 or so short items are grouped together in seven themes Science Researching Culture Policy Communicating Controversy Futures and within each theme are arranged chronologically to reveal changing ideas evidence and perspectives about climate change Each themed section is preceded with a brief introduction drawing out the main issues examined Three substantive unpublished new essays have been specially written for the book including one reflecting on the legacy of Climategate Taken as a collection these writings reveal the changes in scientific and public understandings of climate change since the late 1980s as refracted through the mind and expression of one leading academic and public commentator The collection shows the many different ways in which it is necessary to approach the idea of climate change to interpret and make sense of the divergent and discordant voices proclaiming it in the public sphere

Geographers Elizabeth Baigent, André Reyes Novaes, 2018-11-15 Geographers Biobibliographical Studies Volume 37 explores the concept of distinction in geography Through the lives of six geographers working in Brazil North America Europe and R union it investigates what distinction consists of how we identify and celebrate it and how it relates to quotidian practices in the discipline The volume highlights the continuing importance of biography and the International Geographical Union in recording and assessing distinction It also considers the relevance of personal networks for the circulation and translation of distinguished geographical knowledge and how this knowledge can underpin applied projects and critical appraisal of geographical scholarship both at a national and sub national level Gendered notions of distinction are also addressed particularly through June Sheppard who found limited recognition for her work as a result of gendered expectations within the discipline and society at large By reflecting on how we locate distinguished geographers and tell their histories Geographers Biobibliographical Studies Volume 37 makes an important contribution to fostering less canonical work in historical geography

Vegetation and climate interactions in semi-arid regions A. Henderson-Sellers, A.J Pitman, 2012-12-06 The chapters in this section place the problems of vegetation and climate interactions in semi arid regions into the context which recur throughout the book First Verstraete and Schwartz

review desertification as a process of global change evaluating both the human and climatic factors The theme of human impact and land management is discussed further by Roberts whose review focuses on semi arid land use planning In the third and final chapter in this section we return to the meteorological theme Nicholls reviews the effects of El Nino Southern Oscillation on Australian vegetation stressing in particular the interaction between plants and their climatic environment Vegetatio 91 3 13 1991 3 A Henderson Sellers and A J Pitman eds Vegetation and climate interactions in semi arid regions 1991 Kluwer Academic Publishers Desertification and global change 2 M M Verstraete 2 Department of Atmospheric Oceanic and Space Sciences The University of Michigan Ann Arbor MI48109 2143 USA Accepted 24 8 1990 Abstract Arid and semiarid regions cover one third of the continental areas on Earth These regions are very sensitive to a variety of physical chemical and biological degradation processes collectively called desertification

Climate-Ocean Interaction M.E. Schlesinger,2012-12-06 Preface This book is the culmination of a workshop

jointly organized by NATO and CEC on Climate Ocean Interaction which was held at Lady Margaret Hall Oxford University during 26-30 September 1988. The objective of the ARW was to assess the current status of research on climate-ocean interaction with a major focus on the development of coupled atmosphere-ocean-ice models and their application in the study of past, present and possible future climates. This book contains 16 chapters divided into four parts: Introduction, Observations of the Climate of the Ocean, Modelling the Atmospheric, Oceanic and Sea Ice Components of the Climatic System, and Simulating the Variability of Climate on Short, Medium and Long Time Scales. A fifth part contains the reports of the five Working Groups on Climate Observations, Modelling, ENSO, Modelling and Prediction, Climate-Ocean Interaction on Time Scales of Decades to Centuries, and Impact of Paleoclimatic Proxy Data on Climate Modelling. Preface ix, Acknowledgements. I thank Howard Cattle and Neil Wells for their guidance and assistance as members of the Workshop Organizing Committee. I particularly thank Michael Davey for all his efforts as Local Organizer to make the ARW a success. I also thank the staff of Lady Margaret Hall, Oxford University for their help with the arrangements for the ARW.

El Niño and the Southern Oscillation Henry F. Diaz, Vera Markgraf, 2000-11-09. The El Niño Southern Oscillation (ENSO) phenomenon is a recurrent feature of the climate in tropical regions. In this volume, leading experts summarize information gained over the past decade concerning diverse aspects of ENSO which have led to marked improvements in our ability to forecast its development months or seasons in advance. This volume compares ENSO's modern morphology and variability with its recent historic and prehistoric behaviour. It expands and updates Diaz and Markgraf's earlier volume *El Niño: Historical and Paleoclimatic Aspects of the Southern Oscillation* (1992, Cambridge University Press). The volume will be of importance to a broad range of scientists in meteorology, oceanography, hydrology, geosciences, ecology, public health, emergency management, response and mitigation, and decision making. It will also be used as a supplementary textbook and reference source in graduate courses in environmental studies.

The Climate of Israel Yair Goldreich, 2012-12-06. This book describes and analyses various aspects of Israeli climate. This work also elucidates how both man and nature adjust to various climates. The first part (Chapters 1-9) deals with the meteorological and climatological network, stations, the history of climate research in Israel, analysis of the local climate by season, and a discussion of the climate variables, their spatial and temporal distribution. The second part (Chapters 10-14) of this work is devoted to a survey of applied climatology. This part presents information on weather forecasting, rainfall enhancement, air quality monitoring, and various climatological aspects of planning. There is no sharp division between theoretical and applied climatology topics. Moreover, though various sections seem exclusively theoretical, they also include important applications for various real-life situations, such as rainfall intensities (Section 5.3), frost damage (Section 6.2.4), degree days (Section 6.2.5), and heat stress (Section 6.2.6). Professionals and university students of geography and earth science, meteorology and climatology, even high school students majoring in geography, will be able to use this book as a basic reference work. Researchers in atmospheric science can also use this work as an important source of

reference Students of agriculture will also gain theoretical and practical insights Even architects and engineers will gain another perspective in their fields

Decade-to-Century-Scale Climate Variability and Change National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Panel on Climate Variability on Decade-to-Century Time Scales, 1998-12-24 Society today may be more vulnerable to global scale long term climate change than ever before Even without any human influence past records show that climate can be expected to continue to undergo considerable change over decades to centuries Measures for adaption and mitigation will call for policy decisions based on a sound scientific foundation Better understanding and prediction of climate variations can be achieved most efficiently through a nationally recognized dec cen science plan This book articulates the scientific issues that must be addressed to advance us efficiently toward that understanding and outlines the data collection and modeling needed

The Geography of South America Thomas A. Rumney, 2013-04-18 South America is an area of fascination and study for geographers and other scholars from around the world and its land and people have played important roles in the discovery and distribution of civilizations resources and nations for millennia The region has long stimulated a large amount of research across the many subdisciplines of geography and Thomas A Rumney collects organizes and presents as many scholarly publications as possible in *The Geography of South America A Scholarly Guide and Bibliography* Every South American nation is included Argentina Bolivia Brazil Chile Colombia Ecuador French Guiana Guyana Paraguay Peru Surinam Uruguay and Venezuela Beginning with an overview of the region as a whole successive chapters one per nation are divided by specific subdisciplines of geography cultural social economic historical physical and environmental political and urban Each section is then divided by document type atlases books book chapters articles from scholarly journals master s theses and doctoral dissertations Although the majority of entries focus on English language works selected entries written in Spanish French German and other languages are also included with the entry titles translated into English and noted accordingly

Climate Change in the Mediterranean and Middle Eastern Region Walter Leal Filho, Evangelos Manolas, 2022-01-01 This book serves the purpose of showcasing some of the works in respect of applied research field projects and best practice to foster climate change adaptation across the region Climate change is having a much greater impact in the Mediterranean than the global average In the Paris Climate Agreement the UN member states pledged to stop global warming at well below two degrees if possible at 1.5 degrees This mark which is expected elsewhere only for 2030 to 2050 has already been reached in the region The situation could worsen in the coming years if the global community does not limit its emissions The above state of affairs illustrates the need for a better and more holistic understanding of how climate change affects countries in the Mediterranean region on the one hand but also on the many problems it faces on the other which prevent adaptation efforts There is also a perceived need to showcase successful examples of how to duly address and manage the many social economic and political problems posed by climate change in the region in order to replicate and

even upscale the successful approaches used. It is against this background that the book *Climate Change in the Mediterranean and Middle Eastern Region* has been produced. It contains papers prepared by scholars, practitioners and members of governmental agencies undertaking research and/or executing climate change projects and working across the region. *Environmental Policies* John Sullivan, 1994 ***Foreign Agricultural Economic Report***, 1961 ***Advances in Climate Change and Global Warming Research and Application: 2012 Edition***, 2012-12-26. *Advances in Climate Change and Global Warming Research and Application 2012 Edition* is a ScholarlyEditions eBook that delivers timely, authoritative and comprehensive information about Climate Change and Global Warming. Climate Governance in the Arctic Timo Koivurova, E. Carina H. Keskitalo, Nigel Banks, 2010-03-12. Climate change is affecting the Arctic environment and ecosystems at an accelerating speed, twice the rate of the global average. This is opening the Arctic to transportation and resource development and creating serious challenges for local communities and indigenous peoples. *Climate Governance in the Arctic* considers two aspects of climate change from an institutional perspective. It focuses on how relevant regimes, institutions and governance systems support mitigation of climate change. It also examines the extent to which the varying governance arrangements in the Arctic support adaptation and the development of adaptation processes for the region. The book's focus on Arctic governance offers unique insights within climate change mitigation and adaptation research. ***Community Adaptation and Vulnerability in Arctic Regions*** Grete K. Hovelsrud, Barry Smit, 2010-09-08. *The Year That Changed How We View the North*. This book is about a new theoretical approach that transformed the field of Arctic social studies and about a program called International Polar Year 2007-2008 (IPY) that altered the position of social research within the broader polar science. The concept for IPY was developed in 2003-2005; its vision was for researchers from many nations to work together to gain cross-disciplinary insight into planetary processes to explore and increase our understanding of the polar regions, the Arctic and Antarctica and of their roles in the global system. IPY 2007-2008, the fourth program of its kind, followed in the footsteps of its predecessors: the first IPY in 1882-1883, the second IPY in 1932-1933, and the third IPY, later renamed to International Geophysical Year or IGY in 1957-1958. All earlier IPY/IGY have been primarily geophysical initiatives with their focus on meteorology, atmospheric and

geomagnetic observations and with additional emphasis on glaciology and sea ice circulation As such they excluded socio economic disciplines and polar indigenous people often deliberately except for limited ethnographic and natural history collection work conducted by some expeditions of the first IPY That once dominant vision biased heavily towards geophysics oceanography and ice sheets left little if any place for people that is the social sciences and the humanities in what has been commonly viewed as the hard core polar research
