Steroid Receptors in Health and Disease Virinder Moudgil, 2013-03-09 During the last two decades progress in steroid hormone research has resulted in the development of new approaches to contraception as well as diagnosis and treatment of endocrine disorders and cancers Although significant advances have been made in the purification characterization immunochemistry and molecular biology of steroid receptors the precise molecular mechanism of steroid hormone action has remained obscure This book captures the detailed presentations made at the first conference on Steroid Receptors in Health and Disease held at Meadow Brook Hall Oakland University in the fall of 1987 The purpose of this international conference was to facilitate scientific exchange toward a better understanding of the mode of action of steroid hormones The scientific sessions consisted of poster presentations and state of the art lectures the latter of which make up this volume The first chapter is meant to provide the reader with a more general background of the topics covered in the book as well as to discuss certain theme related issues that are either not yet well established or accepted or are in the stage of infancy It is hoped that this volume will serve as a useful treatise for students and investigators interested in basic and clinical aspects of biological regulation by steroid hormones A task of this magnitude could not have been undertaken without the encouragement advice and continued generous assistance of the members of the scientific committee I am gratefully indebted to Drs Molecular and Cellular Biology of Insulin-like Growth Factors and Their Receptors Derek Leroith, Mohan K. Raizada, 2012-12-06 An essential element in the development and functional integrity of all organisms is intercellular communication This is achieved by the secretion of soluble messenger molecules which subsequently interact with receptor effector pathways in the responsive cells Hormones are traditionally defined as chemical messengers synthesized by endocrine glands Unlike hormones produced by endocrine glands growth factors are hormone related substances produced by many tissues and play an important role in controlling growth and development While the exact physiological roles of growth factors have yet to be elucidated they play important roles in the regulation of cellular proliferation and or differentiation during ontogenesis growth and differentiation During recent years there has been a substantial increase in research related to peptide growth factors their receptors and modes of action With the discovery and characterization of numerous growth factors it became clear that these growth factors had multiple features in common with classic hormones as well as with oncogenes Furthermore there are distinct families of growth factors based either on structural or functional similarities Basic Neurochemistry R.
