Sharp, 2010-06-21 This collection is an interdisciplinary edited volume that examines the circulation of Darwinian ideas in the Atlantic space as they impacted systems of Western thought and culture Specifically the book explores the influence of the principle tenets of Darwinism such as the theory of evolution the ape man theory of human origins and the principle of sexual selection on established transatlantic intellectual traditions and cultural practices In doing so it pays particular attention to how Darwinism reconfigured discourses on race gender and sexuality in a transnational context Covering the period from the publication of *The Origin of Species* 1859 to 1933 when the Nazis National Socialist Party took power in Germany the essays demonstrate the dissemination of Darwinian thought in the Western world in an unprecedented commerce of ideas not seen since the Protestant Reformation Learned societies literary groups lyceums and churches among other sites for public discourse sponsored lectures on the implications of Darwin's theory of evolution for understanding the very ontological codes by which individuals ordered and made sense of their lives Collectively these gatherings reflected and constituted what the contributing scholars to this volume view as the discursive power of the cultural politics of Darwinism

Mortimer J. Adler, 2009-08-01 In this classic work Adler explores how man differs from all other things in the universe bringing to bear both philosophical insight and informed scientific hypotheses concerning the biological and behavioral characteristics of mankind Rapid advances in science and technology and the abstract concepts of that influence on man and human value systems are lucidly outlined by Adler as he touches on the effect of industrialization and the clash of cultures and value systems brought about by increased communication between previously isolated groups of people Among the other problems this study addresses are the

scientific achievements in biology and physics which have raised fundamental questions about humanity's essential nature especially the discoveries in the biological relatedness of all living things Thrown into high relief is humanity's struggle to determine its unique status in the natural world and its value in the world it has created Ultimately Adler's work develops an approach to the separation between scientific and philosophical questions which stands as a model of thought on philosophical considerations of new scientific discoveries and its consequences for the human person

**Human Adaptation** Yehudi A. Cohen,2017-07-12 Underlying the anthropological study of humans is the principle that there is a reality to which a human must adapt for survival Populations must adapt to the realities of the physical world and maintain a proper fit between their biological makeup and the pressures of the various niches of the world Social groups must develop adaptive mechanisms in the organization of their social relations if there is to be order regularity and predictability in patterns of cooperation and competition This book presents an introduction to anthropology that is unified

and made systematic by its focus on adaptations that have accompanied the evolution of humans from non human primates to inhabitants of vast urban areas in modern industrial societies Human Adaptation contains over forty outstanding essays that are intended to serve as an introduction to physical anthropology archeology and linguistics from the point of view of the processes of adaptation The organization of these selections contains a balance between biological and prehistoric cultural adaptations They provide coherence for the study of human evolution Several selections notably those in connection with linguistic adaptations deal with contemporary people in order to shed light on earlier evolutionary processes More than half of the selections deal with biological evolution This volume unifies the subject matter of anthropology within a single and powerful explanatory framework and incorporates the work of the most renowned anthropological experts on man

**The Invention of Prehistory** Stefanos Geroulanos, 2024-04-02 A n incisive and captivating reassessment of prehistory In lucid prose Geroulanos unspools an enthralling and detailed history of the development of modern natural science It s a must read Publishers Weekly starred review An astute powerfully rendered history of humanity Kirkus Reviews starred review An eminent historian tells the story of how we came to obsess over the origins of humanity and how for three centuries ideas of prehistory have been used to justify devastating violence against others Books about the origins of humanity dominate bestseller lists while national newspapers present breathless accounts of new archaeological findings and speculate about what those findings tell us about our earliest ancestors We are obsessed with prehistory and in this respect our current era is no different from any other in the last three hundred years In this coruscating work acclaimed historian Stefanos Geroulanos demonstrates how claims about the earliest humans not only shaped Western intellectual culture but gave rise to our modern world The very idea that there was a human past before recorded history only emerged with the Enlightenment when European thinkers began to reject faith based notions of humanity and history in favor of supposedly more empirical ideas about the world From the state of nature and Romantic notions of virtuous German barbarians to theories about Neanderthals killer apes and a matriarchal paradise where women ruled Geroulanos captures the sheer variety and strangeness of the ideas that animated many of the major thinkers of the eighteenth and nineteenth centuries including Jean Jacques Rousseau Charles Darwin and Karl Marx Yet as Geroulanos shows such ideas became for the most part the ideological foundations of repressive regimes and globe spanning empires Deeming other peoples savages allowed for guilt free violence against them notions of killer apes who were our evolutionary predecessors made war seem natural The emergence of modern science only accelerated the West s imperialism The Nazi obsession with race was rooted in archaeological claims about prehistoric IndoGermans the idea that colonized peoples could be bombed back to the Stone Age was made possible by the technology of flight and the anthropological idea that civilization advanced in stages As Geroulanos argues accounts of prehistory tell us more about the moment when they are proposed than about the deep past and if we hope to start improving our future we would be better off setting aside the search for how it all started A necessary

timely indelible account of how the quest for understanding the origins of humanity became the handmaiden of war and empire *The Invention of Prehistory* will forever change how we think about the deep past      **Man, the Promising Primate** Peter J. Wilson, 1983-01-01 Speculates on man's specific evolution into the promising primate a paradoxical combination of endless potential and a vulnerable need to exchange promises and thus establish social familial and cultural ties
