Man Who Found The Missing Link The The Extraordinary Life Of Eugene Dubois:

The Man who Found the Missing Link Pat Shipman, 2002 **The Man who Found the Missing Link** Pat Shipman, 2001

Pat Shipman's latest book is a scientific biography written like a novel. It tells the story of one of the greatest scientists at the turn of the century, a Dutchman called Eugene Dubois, now largely forgotten, but the man whose discovery of the missing link altered our view of human origins. Through force of personality, intellect, and luck, Dubois pulled off one of the most amazing scientific coups of all time. As a young man, he decided that the most important contribution a man could make to science would be to find the missing link, the extinct form that exemplifies the evolutionary connection between humans and apes. It would be the proof of Darwinian evolution, then still controversial. He deduced where the missing link should be and found the fossil, now known as *Homo erectus*, in Java in 1891. Shipman uses a fascinating range of letters, diaries, and photographs from Dubois' personal collection, friends, and enemies to create a story-driven account of how Dubois' life and career exploded across the world in the 1890s. This man's passion and scientific genius engulfed him, and his friends' lives in a chain reaction of inspiration and betrayal that orbited around his precious fossils for forty years.

The Man who Found the Missing Link Pat Shipman, 2002. Born eighteen months after the first Neanderthal skeleton was found and a year before Charles Darwin published *The Origin of Species*, Eugene Dubois vowed to discover a powerful truth in Darwin's deceptively simple ideas: There is a link, he declared, a link as yet unknown between apes and Man. It takes a brilliant writer to elucidate a brilliant mind, and Pat Shipman shines as never before. *The Man Who Found the Missing Link* is an irresistible tale of adventure, scientific daring, and a strange and enduring love, and it is true.

An Ape's view of Human Evolution Peter Andrews, 2015. This book brings together ecology, evolution, genetics, anatomy, and geology to provide a new perspective on human evolution from the apes' viewpoint.

Milestones in Archaeology Tim Murray, 2007-04-13. This engaging work uses key discoveries, events, people, techniques, and controversies to give the general reader a rich history of archaeology from its beginnings in the 16th century to the present. The history of archaeology leads from the musty collections of dilettante antiquarians to high-tech science. The book identifies three major developmental periods: Birth of Archaeology (16th-18th centuries), Archaeology of Origins and Empires (19th century), and World Archaeology (20th century). An introductory essay acquaints the reader with the essence of the science for each period. The short entries, comprising the balance of the book, expand on the themes introduced in the essays. Organized around personalities, techniques, controversies, and conflicts, the encyclopedia brings to life the history of archaeology. It broadens the general reader's knowledge by detailing the professional significance of widely known discoveries while introducing wider knowledge of obscure but important moments in archaeology. Archaeology is replete with the visionaries and swashbucklers of popular myth; it is also filled with careful and dedicated scientists.

Dissent with Modification: Human Origins, Palaeolithic Archaeology and Evolutionary Anthropology in Britain 1859-1901 John McNabb, 2012-04-21. The major themes of this study include the development of Palaeolithic archaeology, its relationship with

the study of human physical anthropology in Britain and to a lesser extent on the Continent links between these and the study of race and racial origins links with geological developments in climate and glacial studies

The Story of the Human Body Daniel E. Lieberman, 2014-07-01 A landmark book of popular science that gives us a lucid and engaging account of how the human body evolved over millions of years with charts and line drawings throughout Fascinating A readable introduction to the whole field and great on the making of our physicality Nature In this book Daniel E Lieberman illuminates the major transformations that contributed to key adaptations to the body the rise of bipedalism the shift to a non fruit based diet the advent of hunting and gathering and how cultural changes like the Agricultural and Industrial Revolutions have impacted us physically He shows how the increasing disparity between the jumble of adaptations in our Stone Age bodies and advancements in the modern world is occasioning a paradox greater longevity but increased chronic disease And finally provocatively he advocates the use of evolutionary information to help nudge push and sometimes even compel us to create a more salubrious environment and pursue better lifestyles

We, Hominids Frank Westerman, 2022-05-12 The Dutch bestseller Nominated for Le Prix Nicolas Bouvier A masterclass in storytelling exploring who we are and where we came from Danielle Clode Gripping and brilliantly told *We Hominids* deftly blends personal experience with a journalist's eye for a remarkable story Mark McKenna WHO ARE WE WHY ARE WE DIFFERENT FROM ANIMALS WHAT MAKES US HUMAN In this charming thought provoking book one of Holland's greatest non fiction writers hunts down answers to humanity's most fundamental questions Who are we What makes us different from animals With an ancient skull as his starting point he travels the globe tracing the search for the first human being the missing link between humans and apes Westerman introduces us to the world of skull hunters leading experts in our fossil ancestry whose lives are just as fascinating as those of their primeval discoveries He astutely reconsiders the work of illustrious paleoanthropologists in the light of new DNA technology postcolonialism and the rise of women in this male dominated field Westerman discovers a plethora of origin hypotheses and shows how any theory of who we are and where we come from is coloured by the zeitgeist *We Hominids* is a compelling mixture of reportage travelogue and essay reminiscent of Bruce Chatwin or Ryszard Kapuscinski written by a brilliant storyteller and thinker

From Distant Tales Dominik Bonatz, John Miksic, J. David Neidel, 2009-03-26 This is the most comprehensive book devoted to Sumatra in more than half a century It summarizes earlier studies and provides a huge amount of new knowledge for the first time in readily accessible form Sumatra is one of the world's largest islands rich in flora and fauna minerals and timber and located at the midpoint of the maritime route between China and India These are ideal conditions for the creation of a fascinating history Sumatra has played a major role in world trade for 2 000 years but its culture and archaeology have been surprisingly neglected This volume sets out to remedy this defect With chapters on history archaeology anthropology folklore and religion the authors focus particular attention on the relations between the coastal peoples who are best known to outsiders and the hinterlands where most of the important resources lie The list of

authors includes most of the principal living authorities on Sumatra Their cumulative experience consists of many years on all parts of the island The book is copiously illustrated and includes a comprehensive bibliography for those who wish to pursue further study of the wide range of topics covered

Rough and Tumble Travis Rayne Pickering,2013-04-10 Travis Rayne Pickering argues that the advent of ambush hunting approximately two million years ago marked a milestone in human evolution one that established the social dynamic that allowed our ancestors to expand their range and diet He challenges the traditional link between aggression and human predation however claiming that while aggressive attack is a perfectly efficient way for our chimpanzee cousins to kill prey it was a hopeless tactic for early human hunters who in comparison to their large potentially dangerous prey were small weak and slow footed Technology that evolved from wooden spears to stone tipped spears and ultimately to the bow and arrow increased the distance between predator and prey and facilitated an emotional detachment that allowed hunters to stalk and kill large game Based on studies of humans and of other primates as well as on fossil and archaeological evidence Rough and Tumble offers a new perspective on human evolution by decoupling ideas of aggression and predation to build a more realistic understanding of what it is to be human
