The Management of Prostate Cancer in the Third Millennium Donald W. W. Newling, F. M. J. Debruyne, 1998-01-01

Management of Prostate Cancer Michel Bolla, Hendrik van Poppel, 2012-04-24 This book provides an exhaustive review of the current state of the art in the management of prostate cancer from screening to treatment. A particular feature is the emphasis placed on the value of a multidisciplinary approach. The opening chapters address basic aspects including epidemiology, biology and chemoprevention. The role of individual and mass screening is carefully appraised and diagnosis, clinical work up and the role of active surveillance are discussed in detail. Subsequent chapters are devoted to each of the therapies that may be employed including open and robotic laparoscopic radical prostatectomy, the various forms of radiation therapy, high intensity focused ultrasound, cryotherapy, hormonal therapy and targeted therapies and vaccination. Up to date data from clinical trials are included. The editors are members of the EORTC who have coordinated phase III EORTC trials and have worldwide reputations.

Management of Prostate Cancer Kenneth B. Cummings, 2004-10-27 This reference reflects the evolution and advancement of best practices for the treatment of localized prostate cancer and the management of patients with early PSA progression in those failing local therapy. This guide contains chapters by authorities in specific areas of treatment including urologic radiation and medical oncology. Each expertly

Prostate Cancer: New Horizons in Research and Treatment Michael L. Cher, Kenneth V. Honn, Avraham Raz, 2006-04-11 In recent years the pace of research in prostate cancer has increased dramatically. Creative ideas in combination with new and emerging technologies have led to an explosion of discovery. These types of advances in prostate cancer research presage an era of new treatment strategies based on an understanding of the cellular and molecular mechanisms of disease. In creating this book we aimed to cover a broad bench to bedside research spectrum ranging from genetic, molecular and cellular analyses to epidemiological studies, refinements in local treatment strategies and new biologically based non hormonal treatments for systemic disease. Researchers and clinicians will find in this book a group of timely and clinically relevant chapters on prostate cancer research and treatment.

Controversies in the Treatment of Prostate Cancer Lutz Moser, 2008-01-01 Treatment strategies in prostate cancer underlie a permanent change due to continuous improvements. Based on the 10th International Symposium on Special Aspects of Radiotherapy held in Berlin in 2006, this volume highlights key advances in surgical, radiooncological and systemic treatment standards for prostate cancer. Furthermore, interdisciplinary co-operations and controversies are presented and future developments are discussed. The four parts of the book cover the different stages of the disease: localized prostate cancer, the lymph node positive situation, biochemical recurrence and hormone refractory and metastatic prostate cancer. Special attention is given to the value and sequence of systemic treatment options in relation to surgery and radiotherapy. Proving the reader with the latest treatment standards of prostate cancer, this book will be of great value to urologists and radiation oncologists as well as to all others involved in the care of patients with prostate cancer.

Treatment Methods for Early and Advanced Prostate Cancer Roger S. Kirby, Alan Partin, J. Kellogg Parsons, Mark Feneley, 2008-05-01 Prostate cancer is treated in a number of different ways depending on a host of different factors ranging from the severity of the cancer the health of the patient their age and their own personal choice of treatment Whether the choice is open or laparoscopic surgery laser treatment or cryoablation ultimately the options open to **Index of Conference Proceedings** British Library. Document Supply Centre, 2003 Technical Basis of Radiation Therapy Seymour H. Levitt, James A. Purdy, Carlos A. Perez, Philip Poortmans, 2012-02-10 This well received book now in its fifth edition is unique in providing a detailed examination of the technological basis of radiation therapy Another unique feature is that the chapters are jointly written by North American and European authors This considerably broadens the book's contents and increases its applicability in daily practice throughout the world The book is divided into two sections The first section covers basic concepts in treatment planning and explains the various approaches to radiation therapy such as intensity modulated radiation therapy tomotherapy stereotactic radiotherapy and high and low dose rate brachytherapy The second discusses in depth the practical clinical applications of the different radiation therapy techniques in a wide range of cancer sites All chapters have been written by leaders in the field This book will serve to instruct and acquaint teachers students and practitioners with the basic technological factors and approaches in radiation therapy **Anticancer Plants: Clinical Trials and Nanotechnology** Mohd Sayeed Akhtar, Mallappa Kumara Swamy, 2018-07-03 Cancer is one of the leading causes of death in human beings Though several synthetic medicines are used to treat cancer they are largely inefficient and unsafe

In contrast plants which have been used for medicinal purposes since time immemorial have proved to be useful in fighting cancer with natural compounds from plants and their derivatives offering safe and effective treatment and management for several types of cancer. Plants such as *Catharanthus roseus*, *Podophyllum peltatum*, *Taxus brevifolia*, *Camptotheca acuminata*, *Andrographis paniculata*, *Crateva nurvala*, *Croton tonkinensis*, *Oplopanax horridus* etc are important source of chemotherapeutic compounds. These plants have proven their value in the treatment of cancer and various other infectious diseases and several common anticancer compounds such as taxol, podophyllotoxins, camptothecin, vinblastine, vincristine, homoharringtonine etc have been isolated and purified from these medicinal plants. Unfortunately many of these anticancer plants have become endangered due to ruthless and irresponsible harvesting practices. Hence there is a need to conserve these species and to propagate them on a large scale using plant tissue culture. Alternatively plant cell tissue and organ culture biotechnology could be adopted to produce these anticancer compounds without the need for cultivation. A better grasp and continuing exploration of these isolated molecules and products could provide a powerful alternative means of reducing cancer risk.

Anticancer Plants Volume 3 Clinical Trials and Nanotechnology provides a timely review of concepts and experimental data on the application of anticancer plants and their compounds in clinical trials and on the use of nanotechnology in cancer therapy.
