**Improving the Regulation and Management of Low-Activity Radioactive Wastes** National Research Council, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Committee on Improving Practices for Regulating and Managing Low-Activity Radioactive Waste, 2006-05-24 The largest volumes of radioactive wastes in the United States contain only small amounts of radioactive material These low activity wastes LAW come from hospitals utilities research institutions and defense installations where nuclear material is used Millions of cubic feet of LAW also arise every year from non nuclear enterprises such as mining and water treatment While LAW present much less of a radiation hazard than spent nuclear fuel or high level radioactive wastes they can cause health risks if controlled improperly Improving the Regulation and Management of Low Activity Radioactive Wastes asserts that LAW should be regulated and managed according to the degree of risk they pose for treatment storage and disposal Current regulations are based primarily on the type of industry that produced the waste the waste s origin rather than its risk In this report a risk informed approach for regulating and managing all types of LAW in the United States is proposed Implemented in a gradual or stepwise fashion this approach combines scientific risk assessment with public values and perceptions It focuses on the hazardous properties of the waste in question and how they compare with other waste materials The approach is based on established principles for risk informed decision making current risk informed initiatives by waste regulators in the United States and abroad solutions available under current regulatory authorities and remedies through new legislation when necessary

Saling, 1990-01-01 A complete overview of sources of radioactive waste this book highlights the issues involved in safe transportation and decontamination as well as in decommissioning of nuclear facilities It covers radioactive decay and radiation shielding calculations management and disposal of spent nuclear fuel and high level waste low level waste transuranic waste Uranium mill tailings and mixed waste It discusses technical and regulatory aspects of waste management and provides a look at historical record and its influence on current policy

*Low-Level Radioactive Waste Management and Disposition* National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Planning Committee on Low-Level Radioactive Waste Management and Disposition: A Workshop, 2017-06-05 The Department of Energy s Office of Environmental Management DOE is responsible for the safe cleanup of sites used for nuclear weapons development and government sponsored nuclear energy research Low level radioactive waste LLW is the most volumetrically significant waste stream generated by the DOE cleanup program LLW is also generated through commercial activities such as nuclear power plant operations and medical treatments The laws and regulations related to the disposal of LLW in the United States have evolved over time and across agencies and states resulting in a complex regulatory structure DOE asked the National Academies of Sciences Engineering and Medicine to

organize a workshop to discuss approaches for the management and disposition of LLW Participants explored the key physical chemical and radiological characteristics of low level waste that govern its safe and secure management and disposal in aggregate and in individual waste streams and how key characteristics of low level waste are incorporated into standards orders and regulations that govern the management and disposal of LLW in the United States and in other major waste producing countries This publication summarizes the presentations and discussions from the workshop

**Radioactive Waste Management In The 21st Century** William R Roy, 2021-06-10 The safe management of radioactive wastes is of paramount importance in gaining both governmental and societal support for nuclear energy The scope of this new textbook is to provide a comprehensive perspective on all types of radioactive wastes as to how they are created classified characterized and disposed Written to emphasize how geology and radionuclide chemistry impact waste management this book is primarily designed for engineers who have little background in geology with low level wastes decommissioning wastes high level wastes and spent nuclear fuel This textbook provides the most up to date information available on waste management in several countries The content of this work includes transporting radioactive materials to disposal facilities The textbook cites numerous case studies to illustrate past practices current methodologies and to provide insights on how radioactive wastes may be managed in the future An international perspective on waste management is also provided to help the readers better understand the diversity in approaches while highlighting what many countries have in common Review questions for classroom use are provided at the end of each chapter Related Link s [\*The Impact of Low-Level Radioactive Waste Management Policy on Biomedical Research in the United States\*](#) National Research Council, Commission on Life Sciences, Board on Radiation Effects Research, Committee on the Impact of Low-Level Radioactive Waste Management Policy on Biomedical Research in the United States, 2001-02-09 The National Research Council s Committee on the Impact of Low Level Radioactive Waste Management Policy on Biomedical Research in the United States was called on to assess the effects of the low level radioactive waste management policy on the current and future activities of biomedical research This report provides an assessment of the effects of the current management policy for low level radioactive waste LLRW and resulting consequences such as higher LLRW disposal costs and onsite storage of LLRW on the current and future activities of biomedical research That assessment will include evaluating the effects that the lack of facilities and disposal capacity and rules of disposal facilities have on institutions conducting medical and biological research and on hospitals where radioisotopes are used for the diagnosis and treatment of disease [The Principles of Radioactive Waste Management](#) International Atomic Energy Agency, 1995 This Safety Fundamentals document should complement national standards and criteria in the development of radioactive waste management programmes in Member States It encompasses all aspects of radioactive waste management from waste minimization to disposal and sets out objectives and principles for the protection of human health and the environment present and future Please note this
