Management of Technology and Innovation in Japan Cornelius Herstatt, Christoph Stockstrom, Hugo Tschirky, Akio Nagahira, 2006-02-23 What Makes this Book Unique No crystal ball is required to safely predict that in the future even more than in the past innovativeness will be a primary criterion distinguishing successful from unsuccessful companies At the latest since Michael Porter's study on the competitiveness of nations the same criterion holds even for the evaluation of entire countries and national economies Despite the innumerable number of publications and recommendations on innovation competitive innovativeness is still a rare competency The latest publication of UNICE the European Industry organization representing 20 million large midsize and small companies speaks a clear language Europe qualifies to roughly 60% 70% of the innovation strength of the US Japan The record unemployment in many EU countries does not contradict this message A main reason may be given by the fact that becoming an innovative organization means increased openness towards the new and more tolerance towards risks and failures both challenging the inherently difficult management art of cultural change Further lacking innovativeness is often related to legal and fiscal barriers which rather hinder than foster innovative activities Yet another reason to explain Europe's notorious innovation gap refers to insufficient financial R D resources on the company as well as on the national level As a result for example high ranking decisions on the level of the European Commission are taken to increase R D expenditures in the European Union from roughly 2% to 3% of GNP

*Engineered in Japan* Jeffrey K. Liker, John E. Ettlie, John Creighton Campbell, 1995 Engineered in Japan presents a unique and comprehensive examination of technology management in the most successful Japanese companies unique in that all chapters go beyond superficial descriptions of stylized practices to look in depth at particular issues often contradicting or qualifying the conventional wisdom comprehensive in that it covers the entire technology life cycle from basic R D to development engineering to manufacturing processes to learning from the Japanese Each chapter is based on original research by noted scholars in the

field and identifies technology management practices that have become a major source of competitive advantage for highly successful Japanese companies Engineered in Japan documents the best practices from such companies as Toyota Hitachi Toshiba and Nippondenso and discusses how these technology management practices can be usefully adopted in other cultural contexts Going beyond past observations the authors all delve below the surface of Japanese management approaches They look more closely than has been done before at how particular methods are applied and they identify some new practices that have not yet been highlighted in books on Japanese methods Presenting recent data that contradict some conventional thinking about U S Japanese differences they look at old techniques from a new perspective U S managers can perhaps learn more from the process of creation in Japan and the organizational structures that support innovation say the editors in their introduction than from the particular approaches tools and technologies created A running theme throughout the book is that Japanese managers and engineers tend to think in terms of systems focusing not just on the parts but on the connections between them Engineered in Japan is must reading for technology managers and engineers along with anyone interested in Japanese business engineering and management Recovering from Success D. New Consumer Behavior Theories from Japan Akira Shimizu, 2021-04-20 This book focuses on a new type of inclusive consumer decision making process model CDM related to new leading edge consumers There have been two main types of CDMs for consumer behavior one is the stimulus response model and the other is the information processing model The stimulus response model is applicable when consumers buy low involvement products and the information processing model applies for high involvement products Thus consumers decision making depends on the involvement level for the products With the advent of the widespread use of the Internet however the situation has changed Consumers whose

information sensitivity is high i.e. among leading edge consumers now use the Internet to search for information even for low involvement products The consumers decision making process depends therefore on their information sensitivity not on the involvement level of the products Also these leading edge consumers become in effect another type of media as they broaden their experience through the Internet Under these circumstances research about leading edge consumers and the introduction of a new CDM is highly significant This book gathers data about leading edge consumers analyzes these data then proposes a new type of CDM called circulation marketing Following this model not only the previous types of CDM but also the new kind of CDM including share behavior of leading edge consumers is explained **Japan's Interventionist**
